Barnes, 2013-10-22 In line with other volumes in the Neuroscience Perspectives Series this volume covers the background pharmacology molecular biology and biochemistry of antipsychotic drugs together with an overview assessment of the therapeutic considerations Over the past 40 years the effectiveness of conventional neuroleptic agents for psychotic illness has been offset by a wide range of adverse side effects including motor side effects like parkinsonism Studies show that lowering doses may still produce the antipsychotic effect while lessening the risk of side effects As all available antipsychotic drugs are able to block dopamine specifically D2 receptors doses below the threshold level for producing acute motor disorder can still be therapeutically effective With the identification and characterization of multiple dopamine receptors the possibility of more selective drugs with better side effect potential has arisen Other novel antipsychotic agents include D1 receptor blockers partial dopamine agonists and non dopamine drugs such as 5 HT receptor blockers sigma receptor antagonists and NMDA receptor agonists This volume reviews both the basic science of the conventional and atypical neuroleptics and their present and potential therapeutic use

Atypical Antipsychotics Bart A. Ellenbroek, Alexander R. Cools, 2012-12-06 The introduction of chlorpromazine in 1953 and haloperidol in 1958 into clinical practice dramatically altered the therapy of schizophrenic patients Although representing by no means a cure for this severe psychiatric illness it allowed for the first time to adequately control the severe hallucinations and delusional beliefs which prevent these patients from leading a more or less independent life Indeed these antipsychotics and the many congeners that were to follow significantly reduced the number of chronic schizophrenic inpatients in psychiatric clinics all over the world However soon after their introduction it became clear that like all other available drugs antipsychotics were by no means miracle drugs In fact two major problems appeared First the antipsychotics had very little effect on the so called negative or defect symptoms like social isolation apathy and anhedonia and secondly virtually all antipsychotics produced a number of side effects of which the neurological often called extra pyramidal side effects were the most troublesome Especially the tardive dyskinesia which occurred in about 15 to 20% of the patients after prolonged treatment represented a major problem
