Reporting Desk for New Drugs

What is the Reporting Desk for New Drugs?

The Reporting Desk for New Drugs is a national surveillance study in the Netherlands, which is coordinated by the Trimbos Institute. Through this surveillance study, data are collected about new psychoactive substances in the Netherlands. The Reporting Desk for New Drugs reports on which new psychoactive substances were recently detected in the Netherlands, and if available, in which quantities these new psychoactive substances have been detected on the illicit drug market during the last year.

Organization: The Reporting Desk for New Drugs assembles, analyzes, and reports on data collected by a variety of organizations in the Netherlands about the production, trade, and consumption of new psychoactive substances. The Customs Laboratory of the Netherlands and the Netherlands Forensic Institute provide data about seized new psychoactive substances that have been sent to their laboratories for analysis. The Drugs Information and Monitoring System (DIMS) provides data about new psychoactive substances that have been detected in consumer samples submitted for laboratory analysis at a drug checking service¹. The Monitor Drug-related Incidents (MDI) and the Dutch Poisons Information Centre (DPIC) share data about adverse health-related events related to the use of new psychoactive substances. Additional information about new psychoactive substances being used in the Netherlands is also collected from pre-selected online discussion boards about drugs.

Application: The annual report from the Reporting Desk for New Drugs is used by the Ministry of Health, Welfare and Sports in the Netherlands and the Coordination point for Assessment and Monitoring new drugs (CAM²) to assess the distribution and possible risks associated with the sale, transport, and use of new psychoactive substances in the Netherlands.

New psychoactive substances

The European Monitoring Centre for Drugs and Drug Addiction (EMCDDA) defines new psychoactive substances as "substances of abuse, either in a pure form or a preparation, that are not controlled by the 1961 Single Convention on Narcotic Drugs or the 1971 Convention on Psychotropic Substances, but which may pose a public health threat".³

The Reporting Desk for New Drugs focuses on substances that have been produced in and introduced to the illicit drug market for their psychoactive properties since the early 2000s or have been re-introduced after being absent on the illicit drug market for several decades.

A few substances, such as 2C-B, GHB/GBL, DMT, and ketamine, have also been included in the Reporting Desk for New Drugs. These substances are being monitored by the European Monitoring Centre for Drugs and Drug Addiction under the framework of the European Joint Action on new synthetic drugs.

New psychoactive substance groups

New psychoactive substances are usually classified according to their chemical structure or pharmacological properties. These classifications include:

- Synthetic cannabinoids
- Cathinones
- Phenethylamines
- Indole alkaloids (Tryptamines)
- Arylcyclohexylamines
- Synthetic opioids
- New benzodiazepines
- Other new psychoactive substances

Highlights 2022

In the Netherlands, a total of 122 different new psychoactive substances were reported in 2022 to the Reporting Desk for New Drugs by the participating laboratories; 14 of these new psychoactive substances were detected on the illicit drug market in the Netherlands for the first time. Seven of these substances were reported by Netherlands Forensic Institute, two by both the Netherlands Forensic Institute and DIMS, two by DIMS only and three by the Customs Laboratory.

- Netherlands is an important transit country for various New Psychoactive Substances (NPS). A small portion of them is intended for the Dutch consumer market. A notable example of this are synthetic cannabinoids, which are typically primarily reported by the Customs Laboratory of the Netherlands. However, in 2022, they only observed that large quantities of JWH-210 were imported.
- Regarding cathinones, it was particularly noteworthy that the Customs Laboratory of the Netherlands detected record amounts of the substance 3-CMC. This substance was not frequently submitted to DIMS but was found in the majority of samples submitted as 3-MMC.
- What's also striking is that, in the Netherlands in 2022, there is minimal reporting of the presence of synthetic opioids, unlike other European countries. O-desmethyiltramadol is the substance most commonly reported by some of the participating partners.
