Economics As a Science of Human Behaviour Bruno S. Frey, 2013-06-29 This book champions the view that economics is a social science and that moreover it may serve as a new paradigm for the social sciences Economics is taken to be part of those sciences which deal with actual problems of society by providing insights improving our understanding and suggesting solutions I am aware that the way problems are addressed here has little in common with economics as it is generally understood today most economists make strong efforts to imitate the exact sciences Economics tends to become a branch of applied mathematics the majority of all publications in professional journals and books are full of axioms lemmas and proofs and they are much concerned with purely formal deductions Often when the results are translated into verbal language or when they are applied empirically disappointingly little of interest remains The book wants to show that another type of economics exists which is surprisingly little known This type of economics has its own particular point of view It centres on a concept of man or a model of human behaviour which differs from those normally used in other social sciences such as sociology political science law or psychology I do not however claim that economics is the only legitimate social science On the vii viii PREFACE contrary economics can provide useful insights only in collaboration with the other social sciences an aspect which has been disregarded by mathematically oriented economics

A New Education for a New Economy: From Human Capital to Human Flourishing Tal Gilead, 2024-06-03 Providing an in depth novel analysis of education's role in today's economy by scrutinizing its theoretical underpinnings this volume critiques the suitability of the current dominant economic framework for education and for shaping educational policymaking worldwide Critically examining the history and philosophy that underpin our present societal understanding of the link between economics and education the book argues for an urgent redefining of education's role in the economy based on intellectual foundations that significantly differ from our current dominant conceptions Across seven chapters the book posits that the adoption of a new philosophical framework the reshaping of economic and educational aims and the adjustment of our educational system are each necessary to better promote human flourishing Ultimately providing a platform to entirely reconsider the idea that the primary aim of education is to serve the economic system in particular economic growth this book will appeal to scholars researchers and postgraduate students studying educational policy the philosophy of education and the history of education more broadly Education policymakers and academics studying education and the economy may also find this book of interest
