Decommissioning Offshore Structures D.G. Gorman, June Neilson, 2012-12-06 Increasingly over the next few decades, the oil and gas industry faces the complex task of decommissioning its offshore platforms, pipelines, and sub-sea equipment as they reach the end of their operational capabilities. Decommissioning involves and integrates many distinct aspects: engineering, environmental, economic, legal, political, and safety considerations. A practical strategy for removing and disposing of these structures needs to be developed which best meets the demands of all of these different aspects. Specialists in these various fields have been brought together for this volume to contribute their assessments of the situation. The result is an important step toward the development of a coordinated approach to the subject. It is essential reading for all those who are involved with major decommissioning projects, wherever possible.
