Hornebeck, 2021-05-30 Written by internationally known European and American scientists these volumes systematically present many topics in the elastin and elastases fields Volume I explains elastin its biosynthesis physicochemical properties and alteration in a variety of pathologies and with aging Volume II describes elastases their physiological and pathological roles and their control by natural and synthetic inhibitors Filled with illustrations and figures these volumes will benefit researchers physicians and industrial scientists **Cumulated Index Medicus**, 1972 *Recent Advances in the*

Pathophysiology of COPD Trevor T. Hansel, Peter J. Barnes, 2012-12-06 Chronic obstructive pulmonary disease COPD ranges amongst the commonest diseases in the world The relentless progression of the disease causes a pressing need for a better understanding of and therapies for COPD This volume provides state of the art information on the pathophysiology of COPD including an outlook on new therapies It is of interest to researchers and clinicians in academia as well as in the

pharmaceutical industry **ARDS Acute Respiratory Distress in Adults** Timothy W. Evans, C. Haslett, 2013-11-11 Great progress has been made since the first description of the acute respiratory distress syndrome by the Denver group in 1967 Lancet Although we introduced the term adult respiratory distress syndrome in our second and more detailed description of the syndrome in 1971 this was probably a mistake for the simple reason that children also suffer the same syndrome following acute lung insults Today the syndrome of acute respiratory distress in adults ARDS is recognized as a worldwide problem but the prevalence of disease varies in different parts of the world A huge amount of research has focused on the mechanisms of acute lung injury and yet the exact sequence of events and mediators in inflammatory cascade which result in acute respiratory failure from ARDS is not known but many possibilities exist The definition of ARDS has been gradually modified in recent years and investigators around the world are now collaborating in order to establish more uniform concepts in identification risk factors and mechanisms of lung injury which someday will result in improved approaches to management Already at least some centers are showing improved outcomes in ARDS achieving an approximate 60% survival rate In the past most large series documented only about a 40% survivability taking all causes of ARDS This apparent progress is likely attributable to more meticulous and disciplined care than any specific pharmacologic attack on the basic mechanism resulting in ARDS Chronic Obstructive Lung Diseases Norbert F. Voelkel, William MacNee, 2008 This clinical

reference for practitioners offers a new and comprehensive look at chronic obstructive lung disease Global in scale and importance it is an important cause of morbidity and mortality Bringing together a roster of internationally renowned contributors from the front lines of pulmonary medicine and research it is aimed at practitioners in pulmonary medicine

pathology thoracic radiology and epidemiology Its focus is on the pathobiology of chronic obstructive pathology disease and emphysema and its exacerbation of chronic obstructive pulmonary disease and on treatment options This reference works to connect the dots by collating and centralizing the various data on the subject **Research Awards Index** ,1988
