## **Purines And Myocardial Protection:**

Purines and Myocardial Protection Anwar-Saad A. Abd-Elfattah, Andrew S. Wechsler, 2012-12-06 A critical review of the most up to date research on purines and myocardial protection The role of purines in reversible myocardial stunning and irreversible myocardial infarction ischemic injury ventricular arrhythmias and ischemic preconditioning is discussed in detail by experts All reviews address recent and rather controversial issues on purines and myocardial protection Mechanisms of cardioprotection of exogenous versus endogenous purines are discussed in detail The contribution of internationally recognized experts in the field of purines and cardiovascular physiology and in myocardial protection makes this a unique and interesting book for clinicians basic scientists and students Cardiac Metabolism in Health and Disease Salah Abdel-aleem, James E. Lowe, 2012-12-06 This special issue of Molecular and Cellular Biochemistry contains original research papers as well as invited reviews focused in the field of cardiac metabolism and its regulation under normal and disease conditions These papers cover many areas under intensive and rapid development such as the regulation of fatty acid oxidation in the heart the role of cardiac glycogen during ischemia the role of CPT I isoenzymes the pathophysiology of diabetic cardiomyopathy cardiac protection through regulation of energy production the role of fatty acid binding protein under normal and pathological conditions and several other important topics in this area of research We hope that this special issue of Molecular and Cellular Biochemistry provides an up to date source of information for scientists and clinicians interested in the mechanism by which cardiac metabolism is regulated in health and disease and the mechanistic relationship between disturbances in cardiac metabolism and the genesis of cardiovascular diseases *Purine and Pyrimidine Metabolism in Man X* Esther Zoref-Shani, Oded Sperling, 2006-04-11 th This volume contains articles presented at the X International Symposium on Purines and Pyrimidines in Man held on May 14 19 2000 in Tel Aviv Israel The first symposium in this series took place in Tel Aviv in 1973 Since then the symposium has been held every three years in different parts of the world including Europe USA and Japan The participants in this series of symposia are characterised by a wide interest in the various aspects of purines and pyrimidines in man which include biochemistry genetics pharmacology physiology clinics etc Presentations in the symposia include clarification of metabolic pathways characterisation of enzyme structure and kinetics and discoveries of new inborn errors of metabolism and suggestions for new therapeutic approaches for these inborn errors In addition development of new purine and pyrimidine derivatives for the treatment of cancer and viral diseases and many more subjects of mutual interest were brought to the fore With the development of therapeutic means and of new research tools we have witnessed changes in the areas of interest The interest in gout and uric acid urolithiasis has lessened whereas molecular aspects the role of purine and pyrimidine substances in neurotransmission and in purinergic signaling appear to gain greater interest The articles included in this volume contain new data pertaining to the various aspects detailed above *Purine and Pyrimidine Metabolism in Man IX* Andrea Griesmacher, Peter Chiba, Mathias M.

Müller, 2012-12-06 This volume comprises articles presented at the joint IX International and 6 European Symposium on Purine and Pyrimidine Metabolism in Man held in Gmunden Austria June 1 through 7 1997 Since the first of this series of meetings was held in Israel in 1973 conventions were organized every three years in different parts of the world including the USA Japan and Europe The different aspects of purine and pyrimidine metabolism bring together researchers working in molecular genetics biochemical pharmacology biochemistry developmental biology immunology epidemiology and the clinics Oriented research in the field has been seminal for the development of potent anticancer and antiviral drugs As the number of genes which are cloned grows the understanding of metabolism is increasingly enlarged and might provide leads to further improve therapeutic concepts and to better understand mechanisms responsible for the development of resistance against these drugs In certain diseases purine and pyrimidine analogs represent not only the drugs of choice but in fact are the sole therapeutic alternative at present The field has also taken an early lead in attempting to correct inborn errors of purine and pyrimidine metabolism by gene therapy The organization of this meeting involved a large number of people who dedicated their time in an effort to make this symposium a success We thank the Abstract Review Committee the International Advisory Board and in particular the Symposium Secretariat for doing a wonderful job

**Purine and Pyrimidine Metabolism in Man VIII** Amrik Sahota, Milton W. Taylor, 2013-11-11 These volumes record the presentations made at the VIII International Symposium on Purine and Pyrimidine Metabolism in Man held at Indiana University Bloomington USA from May 22 May 27 1994 This was a continuation of meetings held every three years with the idea of bringing clinicians and basic scientists together which we hope results in cross fertilization of ideas Some of the papers presented in this volume represent oral contributions and others are from posters but we emphasize that both are considered of equal merit As is obvious from a perusal of the titles of the papers there has been a shift in the focus of this meeting which reflects a general shift in the area of purine and pyrimidine metabolism The emphasis has definitely shifted to gene structure and molecular genetics with the beginnings we hope of gene therapy as an important branch of this area of science Although many of the inherited diseases discussed in this text can be treated with drugs the major thrust in the future will be in gene therapy where the gene or cDNA will be used to treat the patient with enzyme deficiency particularly if the patient is young As can be seen from the list of authors there is a remarkable degree of international cooperation in this area across countries and continents We thank the many participants who have attended these symposia many times and we welcome the large group of scientists from Eastern Europe who are attending this meeting for the first time
