The Body in Context Gareth Moore, 2005-02-11 In this highly readable book Gareth Moore examines some of the principle arguments and styles of argument advanced by Christians particularly the Roman Catholic Church in support of Christian standards in sexual ethics Catholic teaching has sought to present those standards and values as ones which anyone can embrace ones which they should be able to see as right if only they think about them in the right way Arguments have been drawn from Scripture and also from philosophy and experience the latter being particularly important at a time when the Church can no longer lay down the law but has to be able to persuade But are these arguments valid or are they flawed Moore's study covers such wide ranging topics as sexual pleasure the purpose of sex sexual gestures marriage contraception and homosexuality and in these areas and the more specific sexual issues he covers he often finds the Church's case to be defective Though the Church has valuable things to say its supporting arguments can be unconvincing Better arguments he claims are needed or alternatively the possibility has to be faced that the Church's teaching needs modification Whatever the case the Church needs to do more thinking about sex

Purpose and Cognition David W. Carroll, 2017-04-27 This book discusses the development of Edward Tolman's purposive behaviourism from the 1920s to the 1950s highlighting the tension between his references to cognitive processes and the dominant behaviourist trends It shows how Tolman incorporated concepts from European scholars including Egon Brunswik and the Gestalt psychologists to justify a more purposive form of behaviourism and how the theory evolved in response to the criticisms of his contemporaries The manuscript also discusses Tolman's political activities culminating in his role in the California loyalty oath controversy in the 1950s Tolman was involved in a number of progressive causes during his lifetime activities that drew the attention of both state legislators in California and the Federal Bureau of Investigation It treats Tolman's theoretical and political activities as emanating from the same source a desire to understand the learning process in a scientific manner and to apply these concepts to improve the human condition

Goals, No-Goals and Own Goals Alan Montefiore, Denis Noble, 2021-06-29 First published in 1989 *Goals No Goals and Own Goals* presents a stimulating debate

between three scientists and three philosophers about the significance and nature of goal directed and intentional behaviour At one extreme David McFarland brings into radical question the need for either of these concepts at least in the scientific study of animal behaviour At the other extreme Alan Montefiore argues that such concepts are indispensable to any explication of the meaningful use of language and that we must therefore acknowledge their importance in understanding the nature of human behaviour Denis Noble uses arguments drawn from computer science and physiology to show that it is incorrect to regard intentions as causes of neural events even though it is correct to regard intentionality as responsible for our actions Shawn Lockery outlines how intentional behaviour might be subjected to physiological study Kathy Wilkes widens the debate by asking some basic questions about the nature of explanation and finally Daniel Dennett argues how the study of animal behaviour might inform research in Artificial Intelligence This book will be a useful resource for scholars and researchers of cognitive science philosophy psychology linguistics and physiology
