Inhaltsangabe Introduction The Internet as a communication medium is integrated in almost every process of today s business Barely one company can ignore the Internet technology Hence it is not

astonishing that nowadays the Internet has a great impact on real estate transactions. The question that arises is whether the real estate business is ready for this technology or not. This affects the company side as well as the customer side. Eventually both sides have to be familiar with the technology to accomplish the conclusion of the contract. Although many businesses still work the traditional way which means the physical trade, the evolution obtains everyone. Still many companies deal their real estate avoiding the Internet. However, the reality shows a different picture. More and more people get used to the Internet. The change from a face to face business to a virtual commerce causes different dilemmas. Beside technical issues, the whole selling and buying process has to be overworked and this costs vastly money and time. The change of business is influenced by economic resources, technological progress and meeting the customer's expectations. Germany and the United Kingdom both show very active real estate markets. Given a comparative high and dense population, the total volume of real estate transactions is fairly high. Additionally, the residential properties are interesting for both sides and hence the trade among each other is
