Graph-Theoretic Concepts in Computer Science Herbert Göttler, 1988-06-08 This book reflects the scientific program of the annual workshop on Graph theoretic Concepts in Computer Science in 1987 The purpose of this conference is to be the missing link between theory and application of graphs in as many branches of computer science as a conference scheduled for three days without parallel sessions can permit So the organizers of WG 87 addressed a selected group of people with a strong interest in theory and practice The proceedings include latest results on classical graph theoretic problems including formal language theory applied to graphs and how to apply those results to practical problems e g data bases layout of graph operating systems software engineering chemistry and modelling with graphs **Foundations of Software Technology and Theoretical Computer Science** Kesav V. Nori, 1987-11-25 This volume gives the proceedings of the Tenth Conference on Foundations of Software Technology and Theoretical Computer Science These conferences are organized and run by the computer science research community in India and their purpose is to provide a forum for professional interaction between members of this research community and their counterparts in different parts of the world The volume includes four invited papers on reasoning about linear constraints using parametric queries the parallel evaluation of classes of circuits a theory of commonsense visual reasoning natural language processing complexity theory and logic The 26 submitted papers are organized into sections on logic automata and formal languages theory of programming parallel algorithms geometric algorithms concurrency distributed computing and semantics **Applicable Algebra, Error-Correcting Codes, Combinatorics and Computer Algebra** Thomas Beth, Michael Clausen, 1988-05-04 This volume contains the proceedings of the 4th International Conference on Applicable Algebra Error Correcting Codes Combinatorics and Computer Algebra AAEECC 4 held in Karlsruhe 23 26 September 1986 Selected papers which were given at the conference have been reviewed a second time and are presented here **On the Ambiguity of Erasing Morphisms** Johannes C. Schneider, 2012 This book discusses a very basic and fundamental phenomenon in combinatorics on words namely the ambiguity of morphisms A morphism h is called ambiguous for a word w provided that there is another morphism g which satisfies $g w = h w$ If such another morphism does not exist h is called unambiguous for w Furthermore there are different types of restricted ambiguity which make additional demands on the other morphism g The examination of the ambiguity of morphisms is not only of intrinsic interest but due to the simplicity of the concept also shows various connections to other topics in theoretical computer science and discrete mathematics pattern languages and various other concepts as fixed points of morphisms avoidable patterns and word equations This book is the first comprehensive study of the ambiguity of erasing morphisms i e

morphisms that are allowed to map symbols in the word to the empty word MFDBS 87 Joachim Biskup, Janos Demetrovics, Jan Paredaens, Bernhard Thalheim, 1988-04-01 This volume contains the 13 best of the 18 papers presented at the first MFDBS conference held in Dresden GDR January 19 23 1987 A short summary of the two panel discussions is also included The volume is intended to be a reflection of the current state of knowledge and a guide to further development in database theory The main topics covered are theoretical fundamentals of the relational data model dependency theory design theory null values query processing complexity theory and of its extensions graphical representations NF2 models conceptual modelling of distributed database management systems and the relationship between logic and databases
