Secrets of the Universe Paul Murdin, 2009 Discoveries in astronomy challenge our fundamental ideas about the universe Where the astronomers of antiquity once spoke of fixed stars we now speak of whirling galaxies and giant supernovae Where we once thought Earth was the center of the universe we now see it as a small planet among millions of other planetary systems any number of which could also hold life These dramatic shifts in our perspective hinge on thousands of individual discoveries moments when it became clear to someone that some part of the universe whether a planet or a supermassive black hole was not as it once seemed *Secrets of the Universe* invites us to participate in these moments of revelation and wonder as scientists first experienced them Renowned astronomer Paul Murdin here provides an ambitious and exciting overview of astronomy conveying for newcomers and aficionados alike the most important discoveries of this science and introducing the many people who made them Lavishly illustrated with more than 400 color images the book outlines in seventy episodes what humankind has learned about the cosmos and what scientists around the world are poised to learn in the coming decades Arranged by types of discovery it also provides an overarching narrative throughout that explains how the earliest ideas of the cosmos evolved into the cutting edge astronomy we know today Along the way Murdin never forgets that science is a human endeavor and that every discovery was the result of inspiration hard work or luck usually all three The first section of *Secrets* explores discoveries made before the advent of the telescope from stars and constellations to the position of our own sun The second considers discoveries made within our own solar system from the phases of Venus and the moons of Jupiter to the comets and asteroids at its distant frontier The next section delves into discoveries of the dynamic universe like gravitation relativity pulsars and black holes A fourth examines discoveries made within our own galaxy from interstellar nebulae and supernovae to Cepheid variable stars and extrasolar planets Next Murdin turns to discoveries made within the deepest recesses of the universe like quasars supermassive black holes and gamma ray bursters In the end Murdin unveils where astronomy still teeters on the edge of discovery considering dark matter and alien life
