Securities Valuation:

Firm, Equity Asset, and Fixed Income Securities Valuation Vusani Moyo, 2024-08-12 This textbook begins by introducing the concept of the time value of money and explaining how it is applied in valuation. It then uses practical and easy to understand examples to illustrate the application of the time value of money concept in valuing cash flows, annuities, and perpetuities. This is followed by an in-depth discussion of the firm's financing sources and the determination of its cost of capital. The remainder of the textbook discusses the valuation of fixed income securities, equity assets, and the firm, featuring specific examples and case studies from South Africa, Europe, and the Americas. Equity asset and firm valuation approaches discussed include variants of single and multiple stage growth dividend discount models, free cash flows, residual income, and multiple valuation approaches. The practical examples and case studies equip students with the tools they need to apply these valuation approaches. Aimed at upper undergraduate and postgraduate accounting and finance students, this textbook discusses in which context each valuation approach is most appropriate. Electronic supplementary materials are available online by chapter.

Accounting and Valuation Guide: Valuation of Privately-Held-Company Equity Securities Issued as Compensation AICPA, 2016-10-31 This new Guide has been developed by AICPA staff and the Equity Securities Task Force and is the first in a series of 3 NEW AICPA Accounting Valuation Guides to be released. This long anticipated release reflects best practices developed over the previous decade. Since the issuance of FASB ASC 718 and 505-50 in 2004, valuing stock-based compensation (cheap stock) has been a significant challenge for private companies. This New Guide has been designed to mitigate those challenges. It brings you practical guidance and illustrations related to accounting disclosures and valuation of privately held company equity securities issued as compensation. This guide includes: Evaluating private and secondary market transactions; What should companies do when transaction activity doesn't match their estimates of value; Adjustments for control and marketability; How should companies think about the value of the enterprise for the purpose of valuing minority securities; When is it appropriate to apply a discount for lack of marketability and how should the estimated discount be supported; Highly leveraged entities; How should companies incorporate the fair value of debt in the valuation of equity securities; What is the impact of leverage on the expected volatility of various securities; The relevance of ASC 820, SFAS 157 to cheap stock issues; Updated guidance and illustrations regarding the valuation of and disclosures related to privately held company equity securities issued as compensation. This Guide also provides expanded and more robust valuation material to reflect advances in the theory and practice of valuation since 2004. This edition includes guidance from FASB ASC 718, 505-50, 820-10, and SSVS 1, which were all issued since the last AICPA guidance dedicated to this issue.
