Sedimentary Petrography 4ed Rev Volume 2:

Diagenesis in Sediments and Sedimentary Rocks, Volume 2 G. Larsen, G.V. Chilingarian, 2010-09-23 Diagenesis in Sediments and Sedimentary Rocks Volume 2 *Economic Geology and the Bulletin of the Society of Economic Geologists*, 1926 **Sedimentary Geology of Egypt**, 2000 *Economic Geology*, 1926 **Bibliography and Index of Geology**, 1979 **Concrete Petrography** Alan Poole, Ian Sims, 2016-12-19 This classic reference has established the value of petrography as a powerful method for the investigation of concrete as a material. It provides an authoritative and well illustrated review of concrete composition and textures including the causes of defects, deterioration and failure that can be identified using a petrological microscope. This new edition is entirely revised and updated and also greatly extended to take account of new scientific developments and significant improvements in instrumentation and to reflect current laboratory working practices as well as to reflect new understanding of the performance of concrete and related materials. Now in full color throughout *Concrete Petrography* Second Edition provides case study examples with appropriate explanatory discussions and practical advice on selecting, handling and preparing specimens. It assists and guides the engineer, the trainee and the experienced petrographer in understanding the scientific evidence that is basic to petrographic analysis and so will lead to more accurate and timely diagnosis and treatment of problems in structural concrete. This book includes Contributions in specialist areas by internationally recognized experts. Explanation of computer techniques as an aid to petrography. Full coverage of inspection, sampling and specimen preparation. New sections covering recent technological development of equipment. Guidance on observation of cement and concrete mineralogy and microfabrics. Discussion and illustrative examples of deterioration and failure mechanisms. New work and guidance on the determination of water/cement ratio. New color illustrations and micrographs throughout. Thorough updating of standards, other authoritative publications and references. A fully revised, extended and updated glossary of optical and other properties. *B.H. Blackwell* B.H. S. Hallur, Costanza Emanuelli, Luis Sobrevia, 2023-02-14 *U.S. Geological Survey Professional Paper*, 1974 **Sedimentary Basins** Gerhard Einsele, 2013-06-29 The modern geological sciences are characterized by extraordinarily rapid progress as well as by the development and application of numerous new and refined methods, most of them handling an enormous amount of data available from all the continents and oceans. Given this state of affairs, it seems inevitable that many students and professionals tend to become experts in relatively narrow fields and thereby are in danger of losing a broad view of current knowledge. The abundance of new books and symposium volumes testifies to this trend toward specialization. However, many

geologic processes are complex and result from the interaction of many seemingly unrelated individual factors. This signifies that we still need generalists who have the broad overview and are able to evaluate the great variety of factors and processes controlling a geologic system such as a sedimentary basin. In addition, this also means that cooperation with other disciplines in the natural sciences and engineering is increasingly important. Modern text books providing this broad overview of the earth sciences are rare. *Bibliography of North American Geology*, 1965-1919: 28 cumulation includes material previously issued in the 1919-20, 1935-36 issues and also material not published separately for 1927-28, 1929-39. The United States Catalog Mary Burnham, Carol Hurd, 1928. **Heavy Minerals** Sergio Andò, 2021-09-09. The principal aim of this book is to provide a wide range of information and a useful reference for researchers interested to investigate heavy mineral assemblages in different geological settings and for a variety of purposes. The methodological developments achieved in recent years for the identification of heavy minerals in a wide grain size range are illustrated. All factors that affect heavy mineral concentration and relative proportions including hydraulic sorting, mechanical abrasion, chemical weathering and post-depositional dissolution and all factors able to introduce analytical, environmental or diagenetic bias are thoroughly addressed. A proper integration of multiple techniques including bulk sediment, multi-mineral and single mineral methods are discussed by renowned authors in their invited contributions. Dulau & Co, 1924. *The Geology of the Egyptian Nubian Shield* Zakaria Hamimi, Shoji Arai, Abdel-Rahman Fowler, Mohammed Z. El-Bialy, 2020-09-29. This richly illustrated book provides an overview of the Neoproterozoic Pan-African Belt of Egypt (PABE) which represents the northwestern continuation of the Arabian Nubian Shield (ANS) and the East African Orogen (EAO). The first chapter offers an introduction to the Turin Papyrus Map and the historical background of the PABE while the second addresses how the PABE is related to the ANS and EAO. Rock succession of the PABE is dealt with in Chapter 3 while Chapter 4 focuses on Sinai Metamorphic Core Complexes and implications on the break-up of Rodinia. Subsequent chapters discuss a broad range of topics: e.g. ophiolite-dominated suprastructural rocks, volcanosedimentary succession, Neoproterozoic volcanism and volcanic rocks in Egypt, enigmatic issues concerning granite, Dokhan and Hammamat sediments, the lithospheric mantle beneath the Northeast African continent and the mantle section of Neoproterozoic ophiolites from the PABE, sutures, megashear zones and petrogenetic evolution of the Neoproterozoic rocks of Egypt and metallic and non-metallic mineral deposits in the PABE which are covered in extensive detail. The book's closing chapters discuss the application of remote sensing techniques and anisotropy of magnetic susceptibility (AMS) to decipher the tectonic evolution of the PABE as well as the use of geophysical data to map structural features and hydrothermal alteration zones in the PABE.
