Seeing Spatial Form:

Seeing Spatial Form Michael R. M. Jenkin, Laurence R. Harris, 2005-10-27 The world is divided into objects things that are distinct from their backgrounds and that can move or be moved Objects are food and prey and threats as well as neutral items and it is critical to be able to see them How the form of an object is distinguished is one of the most basic yet least understood topics of research in vision perception The object defining system needs to operate in the real world where objects and viewers move and where the scene is cluttered rarely offering a clear unobscured view of any object How are we able to see and define objects using the complex pattern of light falling on the retina An object becomes visible if it differs sufficiently from its surroundings in its luminance color texture motion or depth Although the processes that use these different cues are quite distinct research has shown that they share some organizational principles This book *Seeing Spatial Form* is dedicated to David Martin Regan who has made so many contributions to our understanding of how we see objects Its chapters bring together ideas from some of the world's leading researchers in form vision to explain what we know about distinguishing form The book includes a CD ROM which contains additional demonstrations and color images that considerably enhance the chapter contents *Seeing Spatial Form* will be an invaluable resource for student and professional researchers in vision science cognitive psychology and neuroscience

Seeing Spatial Form Michael Jenkin, Laurence R. Harris, 2006 Accompanying CD ROM contains color imagery and video clips associated with various chapters and the York Vision Conference itself Page v *Seeing Space* Robert A. Crone, 2003-01-01 Spatial vision is a subject in which philosophy psychology ophthalmology neurophysiology and pathology meet It is the unique contribution of this book that gives a survey of the whole subject in historical perspective The author a former professor of ophthalmology at the University of Amsterdam is an authority in the field of binocular vision *Diplopia* 1973 and colour vision *History of Color* 1999 *Seeing Space* is written for ophthalmologists optometrists orthoptists and other practitioners of visual science but also for psychologists and anybody interested in the philosophy and science of perception The book contains three parts Part I contains chapters on objective and subjective space and on non visual space perception Part II begins with a short survey of the visual system As eye movements are of crucial importance in the perception of space the evolution of the eye and the eye movements is described There are chapters on the perception of direction stereoscopic depth and movement A sensorimotor theory of space perception is elaborated Part III is dedicated to the perception of objects There are chapters on the perception of contours surfaces dimensionality and size including the moon illusion Finally the problem of the relation between mind and matter is raised but not solved *Semiparallel Submanifolds in Space Forms* Ülo Lumiste, 2009-03-02 Quite simply this book offers the most comprehensive survey to date of the theory of semiparallel submanifolds It begins with the necessary background material detailing symmetric and semisymmetric Riemannian manifolds smooth manifolds in space forms and parallel submanifolds The book then introduces semiparallel submanifolds and gives some characterizations for their class as well as

several subclasses The coverage moves on to discuss the concept of main symmetric orbit and presents all known results concerning umbilic like main symmetric orbits With more than 40 published papers under his belt on the subject Lumiste provides readers with the most authoritative treatment *Reading Images and Seeing Words* Alan English, Rosalind Silvester, 2004 Focussing on both traditional and modern media theatre fiction poetry graphic art cinema the essays of *Reading Images and Seeing Words* show how it is according to signifying codes rhetoric poetics metaphor that meaning and knowledge are produced Not the least value of this collection is the insight it gives into the multiple models of word image interaction and the rich ambiguity of the tautological and oxymoronic relations they embody **BOOK JACKET** **Seeing**

More Samantha Matherne, Gardner Cowles Associate Professor of the Humanities Samantha Matherne, 2024-07-19 There is a long standing tradition in philosophy that defines imagination as engaging with things that are not real or present as a kind of fantasy Immanuel Kant offered an original theory of imagination as something that shapes our encounters with what is real present and pervades our lives This book brings this theory of imagining to light **Symmetry as a Developmental Principle in Nature and Art** Werner Hahn, 1998 Looking beyond the boundaries of various disciplines the author demonstrates that symmetry is a fascinating phenomenon which provides endless stimulation and challenges He explains that it is possible to readapt art to the sciences and vice versa by means of an evolutionary concept of symmetry Many pictorial examples are included to enable the reader to fully understand the issues discussed Based on the artistic evidence that the author has collected he proposes that the new ars evolutoria can function as an example for the sciences The book is divided into three distinct parts each one focusing on a special issue In Part I the phenomenon of symmetry including its discovery and meaning is reviewed The author looks closely at how Vitruvius Polyclitus Democritus Plato Aristotle Plotinus Augustine Alberti Leonardo da Vinci and Durer viewed symmetry This is followed by an explanation on how the concept of symmetry developed The author further discusses symmetry as it appears in art and science as well as in the modern age Later he expounds the view of symmetry as an evolutionary concept which can lead to a new unity of science In Part II he covers the points of contact between the form developing process in nature and art He deals with biological questions in particular evolution The collection of new and precise data on perception and knowledge with regard to the postulated reality of symmetry leads to further development of the evolutionary theory of symmetry in Part III The author traces the enormous treasure of observations made in nature and culture back to a few underlying structural principles He demonstrates symmetry as a far reaching leading structuring causal element of evolution as the idea lying behind nature and culture Numerous controllable reproducible double mirror experiments on a new stereoscopic vision verify a symmetrization theory of perception **The Oxford Handbook of Synesthesia** Julia Simner, Edward M. Hubbard, 2018-10-23 Synesthesia is a fascinating phenomenon which has captured the imagination of scientists and artists alike This title brings together a broad body of knowledge about this condition into one definitive state of the art handbook **Chinese Spatial Strategies** Jianfei

Zhu,2004 How do the Chinese design a space What are the similarities and differences between spaces designed for palaces and cities How were the extension of the Great Wall the reopening of the Grand Canal and the building of Beijing interrelated By closely examining the buildings of Imperial Beijing 1420 1911 this book seeks to answer these questions by exploring whether there is a generic approach to spatial disposition in the Chinese tradition Chinese Spatial Strategies considers spatial design on many levels and in different aspects including The geo political design of a map of Asia The layout of the city as a representation of imperial ideology The city as a social realm of interrelations between the central authority and local urban society The Forbidden City as an apparatus of power A comparison between European visual compositions and the aesthetic composition of Beijing Drawing upon recent work in social theory the author provides a spatial and political analysis of the Forbidden City and a realistic account of Imperial Beijing This book challenges the convention of formal description of Chinese cities and will appeal to all those with an interest in Chinese buildings and architecture The Authority of Material Vs. the Spirit Douglas D Hunter,2006-12-22 A new mathematically based structure for language allows for a new context with which one can make verifiable predictions about material life mind and the spiritual intent of creative existence

Re-viewing Space Rosario Caballero,2006 Annotation Re Viewing Space Figurative Language in Architects Assessment of Built Space draws attention to the structure of mind as shown by the pervasiveness of figurative language in all kinds of discourse It integrates insights from cognitive theory with discourse analytic procedures in order to explore the role of metaphor in real communication Bearing in mind that an understanding of the relationship between conceptual schemas and linguistic expressions cannot be effected without considering the cultural contexts in which metaphors occur this book is concerned with exploring the kind of metaphors used by architects for assessing design solutions in building reviews Jacket

Laws of Seeing Wolfgang Metzger,2009-08-21 The first English translation of a classic work in vision science from 1936 by a leading figure in the Gestalt movement covering topics that continue to be major issues in vision research today This classic work in vision science written by a leading figure in Germany s Gestalt movement in psychology and first published in 1936 addresses topics that remain of major interest to vision researchers today Wolfgang Metzger s main argument drawn from Gestalt theory is that the objects we perceive in visual experience are not the objects themselves but perceptual effigies of those objects constructed by our brain according to natural rules Gestalt concepts are currently being increasingly integrated into mainstream neuroscience by researchers proposing network processing beyond the classical receptive field Metzger s discussion of such topics as ambiguous figures hidden forms camouflage shadows and depth and three dimensional representations in paintings will interest anyone working in the field of vision and perception including psychologists biologists neurophysiologists and researchers in computational vision and artists designers and philosophers Each chapter is accompanied by compelling visual demonstrations of the phenomena described the book includes 194 illustrations drawn from visual science art and everyday experience that invite readers to verify Metzger s observations for

themselves Today's researchers may find themselves pondering the intriguing question of what effect Metzger's theories might have had on vision research if Laws of Seeing and its treasure trove of perceptual observations had been available to the English speaking world at the time of its writing

Space, Place and Gender Doreen Massey, 2013-06-10 This new book brings together Doreen Massey's key writings on three areas central to a range of disciplines. In addition, the author reflects on the development of these ideas and outlines her current position on these important issues. The book is organized around the three themes of space, place and gender. It traces the development of ideas about the social nature of space and place and the relation of both to issues of gender and debates within feminism. It is debates in these areas which have been crucial in bringing geography to the centre of social sciences thinking in recent years and this book includes writings that have been fundamental to that process. Beginning with the economy and social structures of production, it develops a wider notion of spatiality as the product of intersecting social relations. In turn, this has led to conceptions of place as essentially open and hybrid, always provisional and contested. These themes intersect with much current thinking about identity within both feminism and cultural studies. Each of the themes is preceded by a section which reflects on the development of ideas and sets out the context of their production. The introduction assesses the current state of play and argues for the close relationship of new thinking on each of these themes. This book will be of interest to students in geography, social theory, women's studies and cultural studies.

The Mathematical Structure of Stable Physical Systems Dr. Martin Concoyle, G.P. Coattmundi, 2014-01-16 This book is an introduction to the simple math patterns used to describe fundamental stable spectral orbital physical systems represented as discrete hyperbolic shapes. The containment set has many dimensions and these dimensions possess macroscopic geometric properties which are also discrete hyperbolic shapes. Thus, it is a description which transcends the idea of materialism, i.e. it is higher dimensional and it can also be used to model a life form as a unified high dimension geometric construct which generates its own energy and which has a natural structure for memory where this construct is made in relation to the main property of the description being in fact the spectral properties of both material systems and of the metric spaces which contain the material systems where material is simply a lower dimension metric space and where both material components and metric spaces are in resonance with the containing space. Partial differential equations are defined on the many metric spaces of this description but their main function is to act on either the usually unimportant free material components to most often cause non linear dynamics or to perturb the orbits of the quite often condensed material trapped by or within the stable orbits of a very stable hyperbolic metric space shape.

Re-Imagining Public Space D. Boros, J. Glass, 2014-12-09 Public space both literally and figuratively is foundationally important to political life. From Socratic lectures in the public forum to Occupy Wall Street and the Arab Spring, public spaces have long played host to political discussion and protest. The book provides a direct assessment of the role that public space plays in political life.

spent most of his career at The Bartlett University College London where he founded and developed with a team of colleagues an original research programme that set the study of architecture on a firm scientific basis His transformational way of thinking about buildings and cities influenced generations of scholars researchers and practitioners within the built environment disciplines and way beyond in fields ranging from archaeology and biology to physics and zoology Space Syntax Selected papers by Bill Hillier provides a canon of works that reflects the progression of Hillier s ideas from the early publications of the 1970s to his most recent work published before his death in 2019 This selection of influential works ranges from his papers on architecture as a professional and research discipline through to his later papers that present a theory of the spatial structure of the city and its social functions By bringing together writing from across his career span of half a century with specially commissioned introductions by a wide range of international experts in the field we are able to contextualise and show the range and evolution of Hillier s key ideas

Narrative after Deconstruction Daniel Punday,2012-02-01 Interrogating stories told about life after deconstruction and discovering instead a kind of afterlife of deconstruction Daniel Punday draws on a wide range of theorists to develop a rigorous theory of narrative as an alternative model for literary interpretation Drawing on an observation made by Jean Fran ois Lyotard Punday argues that at the heart of narrative are concrete objects that can serve

as lynchpins through which many different explanations and interpretations can come together Narrative after Deconstruction traces the often grudging emergence of a post deconstructive interest in narrative throughout contemporary literary theory by examining critics as diverse as Jacques Derrida Gilles Deleuze Elizabeth Grosz and Edward Said Experimental novelists like Ronald Sukenick Raymond Federman Clarence Major and Kathy Acker likewise work through many of the same problems of constructing texts in the wake of deconstruction and so provide a glimpse of this post deconstructive narrative approach to writing and interpretation at its most accomplished and powerful

The World of the Senses Rudolf Steiner, 2014 In this concise series of lectures Rudolf Steiner shows how the human senses reveal the mysterious world of the will which is at once a spiritual and physical phenomenon The senses act as a portal connecting our physical and etheric bodies with what Steiner refers to as worlds of all pervading will and all pervading wisdom He elaborates this theme giving some unexpected and delightful insights into the senses of hearing and sight and in particular how we experience colour Steiner suggests that divine spiritual beings had different intentions for the formation of physical human beings but that adversary powers caused disruption leading to a more materialized constitution He describes disorders in the connections between the human physical etheric astral and ego bodies and the ill effects of one aspect overpowering the others He gives insight into human glandular secretions and why we need to eat and digest also connected to the intervention of adversary beings
