Expression of Structural Styles Albert W. Bally, 1983 **Dynamical Geology of Salt and Related Structures I.**

Lerche, 2017-09-29 *Dynamical Geology of Salt and Related Structures* deals with many aspects of the dynamical evolution of salt bodies in sedimentary basins. This book consists of four major sections. Section A deals with salt dynamics and the motion of salt. The impact of a mobile salt mass on the structural development of the overlying formations is considered in Section B while the development of caprock which is commonly found overlying salt diapirs is emphasized in Section C. The last section deliberates the interrelationships between fluid flow, salt dissolution and heat flow in the vicinity of a salt diapir including the connections with maturation of source rocks, migration and trapping of hydrocarbons in salt related structures. This publication is valuable to professional geoscientists interested in processes involved in salt dynamics. Regional Geology and Tectonics David G. Roberts, A.W. Bally, 2012-12-31. Volume 1A *Principles of Geologic Analysis* A how to primer describes the basic concepts petroleum geologists and students need to understand hydrocarbon exploration in a broad range of geological settings globally. Volume 1B *Phanerozoic Rift Systems and Sedimentary Basins* Incorporates industry data to present regional seismic lines and cross sections to accurately document and analyze proven hydrocarbon systems. It also includes summaries of analogue and theoretical models as an essential backdrop to the structure and stratigraphy of a variety of geological settings. Volume 1C *Phanerozoic Passive Margins, Cratonic Basins and Global Tectonic Maps* Focuses on both volcanic and non volcanic passive margins as well as cratonic basins, critical habitats for hydrocarbons. It provides a unique basis for comparison of different passive margins and for an understanding of their structural and stratigraphic evolution as well as their petroleum systems, especially useful to explorationists working in deep water basins and researchers examining the tectonic evolution of the continent-ocean transition. A vast amount of data to enable hydrocarbon play assessments and analysis on passive margins is also included in this thorough yet accessible reference. Individual volumes can also be purchased 9780444530424 9780444563569 9780444563576. Volume 1A discusses in detail the principles of regional geological analysis and the main geological and geophysical tools used in basin analysis. Volume 1B features simple documentation and analysis of major rift systems developed in contrasting geological settings as well as in depth analyses of active rifts in various regions all over the world for immediately implementable petroleum exploration applications. Volume 1C features real world case studies and analyses, useful summaries of analogue and theoretical models, thorough documentation of numerous passive margins that are the focus of deep water oil exploration and unique tectonic maps facilitating access to exact basin locations and their tectonic settings. Seismic and Sequence Stratigraphy and Integrated Stratigraphy Gemma Aiello, 2017-12-06 This book contains six chapters dealing with the investigation of seismic and sequence stratigraphy and integrated stratigraphy including the stratigraphic unconformities in different geological settings and using several techniques and methods including the seismostratigraphic and the sequence stratigraphic analysis the field geological survey the well log stratigraphic interpretation and the lithologic and paleobotanical data Book chapters are separated into two main sections i seismic and sequence stratigraphy and ii integrated

stratigraphy There are three chapters in the first section including the application of sequence and seismic stratigraphy to the fine grained shales to the fluvial facies and depositional environments and to the Late Miocene geological structures offshore of Taiwan In the second section there are three chapters dealing with the integrated stratigraphic investigation of Jurassic deposits of the southern Siberian platform with the stratigraphic unconformities reviewing the related geological concepts and studying examples from Middle Upper Paleozoic successions and finally with the integrated stratigraphy of the Cenozoic deposits of the Andean foreland basin northwestern Argentina

The Tectonic and Climatic Evolution of the Arabian Sea Region Peter D. Clift, 2002 The Arabian Sea region has several features that make it the best area for studies of climate and palaeoceanographic responses to tectonic activity most notably in the context of the South Asian monsoon and its relationship to the growth of high topography in the adjacent Himalayas and Tibet The papers range from high resolution holocene palaeoceanographic studies of the Pakistan margin to regional tectonic reconstructions of the ocean basin and surrounding margins throughout the Cenozoic

An Introduction to Geophysical Exploration Philip Kearey, Michael Brooks, Ian Hill, 2013-04-16 This new edition of the well established Kearey and Brooks text is fully updated to reflect the important developments in geophysical methods since the production of the previous edition The broad scope of previous editions is maintained with even greater clarity of explanations from the revised text and extensively revised figures Each of the major geophysical methods is treated systematically developing the theory behind the method and detailing the instrumentation field data acquisition techniques data processing and interpretation methods The practical application of each method to such diverse exploration applications as petroleum groundwater engineering environmental and forensic is shown by case histories The mathematics required in order to understand the text is purposely kept to a minimum so the book is suitable for courses taken in geophysics by all undergraduate students It will also be of use to postgraduate students who might wish to include geophysics in their studies and to all professional geologists who wish to discover the breadth of the subject in connection with their own work
