Large-Scale PDE-Constrained Optimization in Applications Subhendu Bikash Hazra, 2009-12-16 With continuous development of modern computing hardware and applicable merical methods computational uid dynamics CFD has reached certain level of maturity so that it is being used routinely by scientists and engineers for uid ow analysis Since most of the real life applications involve some kind of optimization it has been natural to extend the use of CFD tools from ow simulation to simu tion based optimization However the transition from simulation to optimization is not straight forward it requires proper interaction between advanced CFD meth ologies and state of the art optimization algorithms The ultimate goal is to achieve optimal solution at the cost of few ow solutions There is growing number of search activities to achieve this goal This book results from my work done on simulation based optimization problems at the Department of Mathematics University of Trier and reported in my postd toral thesis Habilitationsschrift accepted by the Faculty IV of this University in 2008 The focus of the work has been to develop mathematical methods and gorithms which lead to ef cient and high performance computational techniques to solve such optimization problems in real life applications Systematic development of the methods and algorithms are presented here Practical aspects of implemen tions are discussed at each level as the complexity of the problems increase suppo ing with enough number of computational examples

Inverse Problems in Electric Circuits and Electromagnetics N.V. Korovkin, V.L. Chechurin, M. Hayakawa, 2007-04-14 The design and development of electrical devices involves choosing from many possible variants that which is the best or optimum according to one or several criteria These optimization criteria are usually already clear to the designer at the statement of the design problem The methods of optimization considered in this book allow us to sort out variants of the realization of a design on the basis of these criteria

and to create the best device in the sense of the set criteria Optimization of devices is one of the major problems in electrical engineering that is related to an extensive class of inverse problems including synthesis diagnostics fault detection identification and some others with common mathematical properties When designing a device the engineer actually solves inverse problems by defining the device structure and its parameters and then proceeds to deal with the technical specifications followed by the incorporation of his own notions of the best device Frequently the solutions obtained are based on intuition and previous experience New methods and approaches discussed in this book will add mathematical rigor to these intuitive notions By virtue of their urgency inverse problems have been investigated for more than a century However general methods for their solution have been developed only recently An analysis of the scientific literature indicates a steadily growing interest among scientists and engineers in these problems *Applied Mathematics* Bruno Carpentieri, 2019-09-25 This book contains well written monographs within the broad spectrum of applied mathematics offering an interesting reading of some of the current trends and problems in this fascinating and critically important field of science to a broad category of researchers and practitioners Recent developments in high performance computing are radically changing the way we do numerics As the size of problems is expected to grow very large in the future the gap between fast and slow algorithms is growing rapidly Novel classes of numerical methods with reduced computational complexity are therefore needed to make the rigorous numerical solution of difficult problems arising in an industrial setting more affordable The book is structured in four distinct parts according to the purpose and approaches used in the development of the contributions ranging from optimization techniques to graph oriented approaches and approximation theory providing a good mix of both theory and practice
