Consultation-Liaison Psychiatry Hoyle Leigh,2012-12-06 The essential role of the psychiatrist as consultant and

educator of primary care physicians is increasing in importance as the American health care system faces fundamental restructuring In a recent workshop during the annual meeting of the American Psychiatric Association a number of prominent consultation liaison psychiatrists reviewed major developments in consultation liaison psychiatry during the past decade and looked toward the future This book is based on these presentations but it is not simply a proceedings book A number of additional experts have contributed important chapters and all the chapters based on the presentations are expanded and updated Thus this book reviews the current state of consultation liaison psychiatry and anticipates future challenges It also informs the reader about the state of the art knowledge and skills in consultation liaison psychiatry as of 1994 This book should be a valuable up to date overview refresher for both consultation liaison psychiatrists and general psychiatrists who wish to update and formulate his her consultant role It should be especially valuable for psychiatric residents for whom the role as consultant to primary physicians assumes increasing importance and for primary physicians and medical students who are interested in learning about commonly encountered complex biopsychosocial problems of their patients and integrating these dimensions in patient care I am grateful to Mary Safford and Eileen Bermingham of Plenum for their help with the preparation and production of this book I am also thankful to Anita Shaw for her secretarial help Hoyle Leigh M D

diagnostic competences and effects of instructional interventions aiming to facilitate them are comparable for teachers and doctors Through closely analyzing projects from medical education mathematics education biology education and psychology the reader is presented with multiple options for interventions that may be used in each of the subject areas and the improvements in diagnostic skills that could be expected from each simulation The book concludes with an outline of promising future research on the use of simulations to facilitate professional competences in higher education in general and for the advancement of diagnostic competencies in particular This is an open access book

Relationship Power in Health Care John B. Livingstone, M.D., Joanne Gaffney, R.N., LICSW, 2016-04-19 The personal interface between clinician and patient is a misunderstood subject which can impact all areas of health care Without adequate training in relationship science clinicians inadvertently contribute to empathic failure poor medical decision process difficulty changing health related behavior costly variation and derailment of care extra litigation and clinician burnout Relationship Power in Health Care presents new knowledge and skills that empower health care and wellness professionals to become competent facilitators of behavior and lifestyle change information transfer and medical decision making in collaboration with their patients The new approaches are supported by a wide variety of research and clinical evidence derived from modern psychotherapy brain biology and the latest advances in health coaching and nursing science Putting them to work to improve health care makes good sense both scientifically and ethically This comprehensive text integrates past health psychology models starting from the 1950s with recent advances made since the 1990s in relationship psychology and interpersonal neurobiology It also includes videos of brief medical interviews along with analysis of the strategies and tactics used The tactics outlined and the interview demonstrations conducted by a highly experienced clinical social worker and nurse Joanne Gaffney offer a unique opportunity for all clinicians to acquire valuable skills in both clinician self care and patient care

Brain, Behavior and Evolution, 1992 *The Practice of Mental Health Consultation* Fortune Vincent Mannino, Beryce W. MacLennan, Milton F. Shore, 1975 *Biopsychosocial Approaches in Primary Care* Hoyle Leigh, 2012-12-06 ST MEDICINE IN A CHANGING UNIVERSE AT THE THRESHOLD OF THE 21 CENTURY Hoyle Leigh M D I Professor of Psychiatry San Francisco University of California and Fresno VA Medical Center INTRODUCTION During my lifetime the universe has changed beyond recognition The universe into which I was born in the first half of the 20 century was still infinite permanent orderly and tranquil a universe that worked like a masterfully constructed clock Matter and energy followed Newton's laws of conservation Shortly after my birth Hiroshima proved with a big bang that matter was no longer permanent everything was relative Einstein had also shown that everything that happened was local that is there was an event horizon beyond which no information could reach as nothing can travel faster than light When I was growing up the moon was for lovers and going there was an impossible dream Cosmologically the Big Bang theory that postulates that the universe was born out of an explosion some 10-15 billion years ago from a primordial point won over steady state It has been expanding

ever since although the ultimate fate of the universe is still unknown whether it will keep on expanding resulting in a perpetual state of heat death or will at some point start contracting resulting in a big crunch of gravitational collapse ending in a single black hole out of space time and existence Quantum theory has defeated even Einstein's genius and proven that God indeed plays dice *Acute Care*, 1989

Connecting People with Technology George Hayhoe, Helen M. Grady, 2020-11-25 This book explores five important areas where technology affects society and suggests ways in which human communication can facilitate the use of that technology Usability has become a foundational discipline in technical and professional communication that grows out of our rhetorical roots which emphasize purpose and audience As our appreciation of audience has grown beyond engineers and scientists to lay users of technology our appreciation of the diversity of those audiences in terms of age geography and other factors has similarly expanded We are also coming to grips with what Thomas Friedman calls the flat world a paradigm that influences how we communicate with members of other cultures and speakers of other languages And because most of the flatteners are either technologies themselves or technology driven technical and professional communicators need to leverage these technologies to serve global audiences Similarly we are inundated with information about world crises involving health and safety issues These crises are driven by the effects of terrorism the aging population HIV AIDS and both human made and natural disasters These issues are becoming more visible because they are literally matters of life and death Furthermore they are of special concern to audiences that technical and professional communicators have little experience targeting the shapers of public policy seniors adolescents and those affected by disaster Biotechnology is another area that has provided new roles for technical and professional communicators We are only beginning to understand how to communicate the science accurately without either deceiving or panicking our audience We need to develop a more sophisticated understanding of how communication can shape reactions to biotechnology developments Confronting this complex network of issues we're challenged to fashion both our message and the audience's perceptions ethically Finally today's corporate environment is being shaped by technology and the global nature of business Technical and professional communicators can play a role in capturing and managing knowledge in using technology effectively in the virtual workplace and in understanding how language shapes organizational culture
