Genesis and Development of French Historical Epistemology Gerardo Ienna, 2025-04-25 This book forms an important part of the current revival of the debate around the category of historical epistemology The term historical epistemology designates a methodology or research program aimed at building a historically informed theory of knowledge and or a history of science and technology that enhances its epistemological aspects This book offers an original panorama of the French debate surrounding the emergence and consolidation of the intellectual program of historical epistemology over a period ranging from the end of the 19th century to the second half of the 20th century The first section of this book sets out to reconstruct sociologically and historically the processes of circulation of ideas both nationally and internationally that constituted the conditions of possibility for the emergence of the very idea of historical epistemology in the French intellectual context The second section aims instead to highlight the main theoretical positions both epistemological and historiographical that would make it possible to trace a relative unity of intent among the authors who make up the canon of historical epistemology in their oppositional relationship to other intellectual trends Particular attention is also paid to defining a minor canon of this tradition represented by what is known as mathematical thought The third part of the volume focuses instead on reconstructing the anthropological sociological and political perspectives underlying the methodology employed by authors belonging to historical epistemology The three parts combined make for a uniquely broad yet focused book that is of interest to historians philosophers and scientists alike

The Oxford Handbook of Philosophy of Technology Shannon Vallor, 2022 The Oxford Handbook of Philosophy of Technology gives readers a view into this increasingly vital and urgently needed domain of philosophical understanding offering an in depth collection of leading and emerging voices in the philosophy of technology The thirty two contributions in this volume cut across and connect diverse philosophical traditions methodologies and subfields providing the reader with provocative and original insights on the history concepts problems and challenges that mark humanity's attempts to attain deeper and more lasting wisdom about our complex and evolving relationship to technology

Historical Understanding and Ethics in Social Science Leonidas Tsilipakos, 2025-03-13 Can social scientific description capture the historically individual Is the idea of an ethically committed social science morally defensible This book offers a critical historically grounded perspective on these perennial methodological and ethical problems in their current forms It provides a series of in depth examinations of recent work by prominent authors in sociology and philosophy The book draws on the thought of Peter Winch to provide a coherent response to the core issues that underlie past and present debate in social science and to provide a solid basis for future inquiry It will be of particular interest to social scientists philosophers and historians and to anyone seeking a clear grasp of the demands

made by historical understanding and ethics on the study of society

Science and Christian Ethics Paul

Scherz,2019-05-09 There is a growing crisis in scientific research characterized by failures to reproduce experimental results fraud lack of innovation and burn out In *Science and Christian Ethics* Paul Scherz traces these problems to the drive by governments and business to make scientists into competitive entrepreneurs who use their research results to stimulate economic growth The result is a competitive environment aimed at commodifying the world In order to confront this problem of character Scherz examines the alternative Aristotelian and Stoic models of reforming character found in the works of Alasdair MacIntyre and Michel Foucault Against many prominent virtue ethicists he argues that what individual scientists need is a regime of spiritual exercises such as those found in Stoicism as it was adopted by Christianity in order to refocus on the good of truth in the face of institutional pressure His book illuminates pressing issues in research ethics moral education and anthropology

Foucault and the Human Subject of Science Garðar Árnason,2018-10-29

This book offers a clear analysis of Foucault's work on scientific knowledge and its relationship to individuals and society It suggests a way of using Foucault's tools for science criticism and resistance while avoiding the pitfalls of vulgar relativism or irrational anti science views Two cases of scientific conflict are considered The first considers left handers as subjects of science in particular studies which purport to show that left handers die on average younger than right handers The second case considers Icelanders as subjects of science in the context of a partly failed attempt to construct a genetic database encompassing the entire nation The book will be of interest to bioethicists and philosophers who are concerned with the interaction between science and its human subjects as well as scholars concerned with Foucault's work on science

Techno-Scientific Practices

Federica Russo,2022-10-03 In scholarly debates as well as in everyday parlance we tend to pull science and technology apart science gives us theory and technology applies it In practice however science and technologies are highly intertwined In *Techno Scientific Practices An Informational Approach* Federica Russo looks at the practice of science and elucidates the role of technologies and instruments in the process of knowledge production In this exercise it becomes evident that technologies cannot be analyzed on their own but always in relation to epistemic agents Thus *Techno Scientific Practices* emphasizes the importance of analyzing the process of knowledge production in techno scientific contexts in which there is a triad of relations to look at us the instruments and the world The book thus builds bridges between the philosophy of science philosophy of technology and science and technology studies in an unprecedented way

Pinto,2020-11-25 Foucault Christianity and Interfaith Dialogue develops a new model for interfaith dialogue using the work of the French historian of ideas Michel Foucault The author argues that it is the injustice done to the Other by Roman Catholic Protestant and other centred and unitary models of religious pluralism that allows the introduction of Foucault's de-centring of transcendence and human reason as an alternative model for understanding religious diversity and the role it ought to play in the constitution of the self and the making of society This Foucaultian approach provides a new direction for interfaith dialogue in the modern world and leads to an ethical rather than a nihilistic position while fostering a non unitary theology of religious pluralism and an open textured process of self transformation The author's original and imaginative application and expansion of Foucault's concept of the More from The Archaeology of Knowledge 1969 makes important and original contributions to academic work on Foucault and contemporary theology

A New Science of International Relations Damian Popolo,2016-03-16 Popolo applies Foucauldian methodology to the understanding of Complexity Science for the purposes of generating new understandings related to International Relations in general and to the Kosovo conflict in particular He provides an epistemic analysis to the history of International Relations theory to reveal its intrinsic modernity highlighting how such modernity derives from a particular understanding of scientific epistemology which is being radically undermined by the emergence of Complexity Science Importantly the book shows how these theoretical issues affect specific understandings of crisis in this case Kosovo leading to specific policy decisions in the real world of international policy making
