Nursing against the Odds Suzanne Gordon, 2012-05-15 In the United States and throughout the industrialized world just as the population of older and sicker patients is about to explode we have a major shortage of nurses Why are so many RNs dropping out of health care s largest profession How will the lack of skilled experienced caregivers affect patients These are some of the questions addressed by Suzanne Gordon s definitive account of the world s nursing crisis In *Nursing against the Odds* one of North America s leading health care journalists draws on in depth interviews research studies and extensive firsthand reporting to help readers better understand the myriad causes of and possible solutions to the current crisis Gordon examines how health care cost cutting and hospital restructuring undermine the working conditions necessary for quality care She shows how the historically troubled workplace relationships between RNs and physicians become even more dysfunctional in modern hospitals In Gordon s view the public image of nurses continues to suffer from negative media stereotyping in medical shows on television and from shoddy press coverage of the important role RNs play in the delivery of health care Gordon also identifies the class and status divisions within the profession that hinder a much needed defense of bedside nursing She explains why some policy panaceas hiring more temporary workers importing RNs from less developed countries fail to address the forces that drive nurses out of their workplaces To promote better care Gordon calls for a broad agenda that includes safer staffing improved scheduling and other policy changes that would give nurses a greater voice at work She explores how doctors and nurses can collaborate more effectively and what medical and nursing education must do to foster such cooperation Finally Gordon outlines ways in which RNs can successfully take their case to the public while campaigning for health care system reform that actually funds necessary nursing care

their boundaries of responsibility and authority Nurses Clinical Decision Making will appeal to all undergraduate and postgraduate students of nursing registered nurses and nurse managers Nurse educators hospital managers doctors and healthcare risk managers will also find the information contained here invaluable If nurses are decision makers how can their role and practice be explained Can decision making be taught and are there different levels of decision making skill If so how can expert decision makers be recognised These are just some of the pertinent questions that need to be asked if we are to recognise and understand the centrality of clinical decision making in nursing practice Clinical work is complex and takes place in a complex environment that centres around individuals who themselves are physically socially and spiritually complex Clinical work also involves multiple participants nurses doctors patients physiotherapists occupational therapists pharmacists to name a few who in the course of a days work can make scores of decisions Russell Gurbutt in the Preface

For Public Service Or Money ,2005 Abstract Geographical imbalances in the health workforce have been a consistent feature of nearly all health systems especially in developing countries The authors investigate the willingness to work in a rural area among final year nursing and medical students in Ethiopia Analyzing data obtained from contingent valuation questions they find that household consumption and the student s motivation to help the poor which is their proxy for intrinsic motivation are the main determinants of willingness to work in a rural area The authors investigate who are willing to help the poor and find that women are significantly more likely to help than men Other variables including a rich set of psycho social characteristics are not significant Finally the authors carry out some simulations on how much it would cost to make the entire cohort of starting nurses and doctors choose to take up a rural post The Changing Shape of Nursing

Changing Practice in Health and Social Care Celia Davies,2000-02-11 New Ways of Working in Health and Social Care explores the range and depth of recent challenges facing professionals in health and social care **Unequal Time** Dan Clawson,Naomi Gerstel,2014-07-10 Life is unpredictable Control over one s time is a crucial resource for managing that unpredictability keeping a job and raising a family But the ability to control one s time much like one s income is determined to a significant degree by both gender and class In Unequal Time sociologists Dan Clawson and Naomi Gerstel explore the ways in which social inequalities permeate the workplace shaping employees capacities to determine both their work schedules and home lives and exacerbating differences between men and women and the economically privileged and disadvantaged Unequal Time investigates the interconnected schedules of four occupations in the health sector professional class doctors and nurses and working class EMTs and nursing assistants While doctors and EMTs are predominantly men nurses and nursing assistants are overwhelmingly women In all four occupations workers routinely confront schedule uncertainty or unexpected events that interrupt reduce or extend work hours Yet Clawson and Gerstel show that members of these four occupations experience the effects of schedule uncertainty in very distinct ways depending on both gender and class But doctors who are professional class and largely male have significant control over their schedules and tend to work long hours because they earn respect from their peers for doing so By contrast nursing assistants who are primarily female and working class work demanding hours because they are most likely to be penalized for taking time off no matter how valid the reasons Unequal Time also shows that the degree of control that workers hold over their schedules can either reinforce or challenge conventional gender roles Male doctors frequently work overtime and rely heavily on their wives and domestic workers to care for their families Female nurses are more likely to handle the bulk of their family responsibilities and use the control they have over their work schedules in order to dedicate more time to home life Surprisingly Clawson and Gerstel find that in the working class occupations workers frequently undermine traditional gender roles with male EMTs taking significant time from work for child care and women nursing assistants working extra hours to financially support their children and other relatives Employers often underscore these disparities by allowing their upper tier workers doctors and nurses the flexibility that enables their gender roles at home including for example reshaping their workplaces in order to accommodate female nurses family obligations Low wage workers on the other hand are pressured to put their jobs before the unpredictable events they might face outside of work Though we tend to consider personal and work scheduling an individual affair Clawson and Gerstel present a provocative new case that time in the workplace also collective A valuable

resource for workers advocates and policymakers alike Unequal Time exposes how social inequalities reverberate through a web of interconnected professional relationships and schedules significantly shaping the lives of workers and their families
