Martínez, 2024-02-21 El manual de nutrición para educadores en diabetes es una importante contribución a los programas de educación en diabetes por su carácter práctico y amplia documentación desde el punto de vista científico. No hay duda de su utilidad para todos los profesionales de la salud y para quienes específicamente están en formación de la disciplina de educación en el manejo de la diabetes e incluso para algunos pacientes que al comprender mejor su enfermedad pueden tener un mejor cumplimiento del manejo médico nutricional. Desde el principio de la obra se establecen con claridad los aspectos básicos de la nutrición y alimentación puntualizando de manera práctica las funciones de los macronutrientes y micronutrientes y sus efectos en el metabolismo. En otra sección se desglosan los indicadores clínicos bioquímicos antropométricos dietéticos del estado nutricional emocionales y del estilo de vida necesarios para la evaluación del estado nutricional como prembulo del enfoque nutricional de los pacientes con diabetes. Se describen además las metas y objetivos de la terapia nutricional para los pacientes con diabetes tipo 1 y tipo 2 así como de grupos especiales entre los que se incluyen el adulto mayor y la mujer con embarazo. En otros capítulos se describen el diseño del plan de alimentación el cálculo de los requerimientos calóricos la distribución y equilibrio de los nutrientes porcentajes de adecuación y patrones de distribución de

LA DIETA DE MARIN COUNTY Albert C Goldberg, MD, 2013-12

This book contains everything a parent needs to know to design an optimal diet for the healthy child from infancy through the teenage years. It addresses the need for a practical nutrition book that contains evidence based information rather than faith based reasoning passed off as science. It addresses the daily nutritional health issues of children in a specific truthful and friendly way. In addition to parents this book will be of special interest to nursery schools elementary and high school teachers coaches all health care providers family physicians pediatricians and nurses who work with children including pediatric and family nurse practitioners. At the turn of the previous century malnutrition the lack of certain nutrients vitamins and minerals was a problem second only to infection in this country. Today malnutrition is more likely to be a case of overconsumption of certain nutrients. Too much has replaced too little too much fat too much salt too much sugar and too much ultra processed food. The author reveals the solution to the problem of overconsumption in this book which is peppered throughout with helpful nutritious recipes as well as examples of the food labels of many popular products with notes on what to look out for when reading the packages of your favorite foods. Although most of Dr Goldberg's suggestions and anecdotes come from his years of nurturing thousands of children and their parents he has recruited the experience of many other experts in nutrition. For the past twenty five years the author has worked in countries such as Argentina Chile China Colombia Ecuador Ethiopia Honduras India Nepal Philippines Peru Venezuela and Vietnam where poverty ignorance social disintegration and war have contributed to nutritional diseases and he has brought back with him a keen understanding of the multi cultural effects upon diet. In 2001 Doctor Goldberg was selected as one of fifty Unsung Heroes of Compassion from around the world and was acknowledged personally by His Holiness the XIV Dalai Lama.
