Nutrient Regulation Of Insulin Secretion:

Nutrient Regulation of Insulin Secretion Peter R. Flatt, 1992 The mechanisms of release of insulin in response to the body's intake of nutrients has long been one of the central problems of research into diabetes This book presents the latest findings on the topic from the leading laboratories in the field Molecular Nutrition and Diabetes Didac Mauricio, 2015-12-08 Molecular Nutrition and Diabetes A Volume in the Molecular Nutrition Series focuses on diabetes as a nutritional problem and its important metabolic consequences Fuel metabolism and dietary supply all influence the outcome of diabetes but understanding the pathogenesis of the diabetic process is a prelude to better nutritional control Part One of the book provides general coverage of nutrition and diabetes in terms of dietary patterns insulin resistance and the glucose insulin axis while Part Two presents the molecular biology of diabetes and focuses on areas such as oxidative stress mitochondrial function insulin resistance high fat diets nutraceuticals and lipid accumulation Final sections explore the genetic machinery behind diabetes and diabetic metabolism including signaling pathways gene expression genome wide association studies and specific gene expression While the main focus of each chapter is the basic and clinical research on diabetes as a nutritional problem all chapters also end with a translational section on the implications for the nutritional control of diabetes Offers updated information and a perspective on important future developments to different professionals involved in the basic and clinical research on all major nutritional aspects of diabetes mellitus Explores how nutritional factors are involved in the pathogenesis of both type 1 and type 2 diabetes and their complications Investigates the molecular and genetic bases of diabetes and diabetic metabolism through the lens of a rapidly evolving field of molecular nutrition
