People Machines:

Machines Abraham P. DeLeon, 2015-01-01 This book is about machines those that have been actualized fantastical imaginal machines to those deployed as metaphorical devices to describe complex social processes Machines argues that they transcend time and space to emerge through a variety of spaces and places times and histories and representations They are such an integral fabric of daily reality that their disappearance would have immediate and dire consequences for the survival of humanity They are part and parcel to our contemporary social order From labor to social theory art or consciousness literature or television to the asylums of the 19th century machines are a central figure an outgrowth of affective desire that seeks to transcend organic limitations of bodies that whither age and die Machines takes the reader on an intellectual artistic and theoretical journey weaving an interdisciplinary tale of their emergence across social cultural and artistic boundaries With the deep engagement of various texts Machines offers the reader moments of escape alternative ways to envision technology for a future yet to materialize Machines rejects the notion that technological innovations are indeed neutral propelling us to think differently about those things created under specific economic or historical paradigms Rethinking machines provides a rupture to our current technocratic impetus shining a critical light on possible alternatives to our current reality Let us sit back and take a journey through Machines holding mechanical parts as guides to possible alternative futures Model Machines Long T. Bui, 2022-06-10 A study of the stereotype and representation of Asians as robotic machines through history **The Hidden People** Paul H. Deal, 2002 Lems small furry people live in secret passages within the buildings of the much larger zooks Zooks hunt poison and trap their small neighbors unaware of their true nature Then the lem leader Old Gray announces The time has come and the lems leave their warrens and begin a prophesied journey to the Portal where the Chosen are destined to go to a mysterious place called Tomorrow Zooks learn of the exodus and frightened by the danger the lems pose to long term zook security begin an all out campaign to destroy them before any escape Trez thirteen years old and Chosen flees with his mother and sister from the only home they have ever known Racing against time he and his family cross deserts forests and mountains living on what they can find or steal from their zook enemies Along the way they dodge the zooks their fierce deggs and kaats and the most awesome danger of all zook hunter killer robots Driven by faith as much as reason they risk all to fulfill a prophecy they scarcely comprehend in search of a future beyond their imagination **The Transvection Machine** Edward D. Hoch, 2013-11-26 When a government official dies on the operating table the president calls in the computer cops On Venus a radical exile escapes from a maximum security prison pledging to return to Washington and assassinate the president Transport between Earth and the solar colonies is tightly regulated but the exile knows a shortcut the top secret transvection machine an experimental device that could theoretically be used to teleport men from planet to planet Vander Defoe the tool's creator is busy securing it when he feels a pain in his stomach His appendix is about to explode Defoe dies in the operating room during routine computerized

surgery and the case falls in the lap of the Computer Investigation Bureau which has jurisdiction over all computer related crimes As the team tries to determine who corrupted the system that killed Defoe it finds that in this case all roads lead to Venus The Transvection Machine is the first book in the Carl Crader Mysteries but you may enjoy reading the series in any order

New Romantic Cyborgs Mark Coeckelbergh, 2017-02-24 An account of the complex relationship between technology and romanticism that links nineteenth century monsters automata and mesmerism with twenty first century technology s magic devices and romantic cyborgs Romanticism and technology are widely assumed to be opposed to each other Romanticism understood as a reaction against rationalism and objectivity is perhaps the last thing users and developers of information and communication technology ICT think about when they engage with computer programs and electronic devices And yet as Mark Coeckelbergh argues in this book this way of thinking about technology is itself shaped by romanticism and obscures a better and deeper understanding of our relationship to technology Coeckelbergh describes the complex relationship between technology and romanticism that links nineteenth century monsters automata and mesmerism with twenty first century technology s magic devices and romantic cyborgs Coeckelbergh argues that current uses of ICT can be interpreted as attempting a marriage of Enlightenment rationalism and romanticism He describes the romantic dialectic when this new kind of material romanticism particularly in the form of the cyborg as romantic figure seems to turn into its opposite He shows that both material romanticism and the objections to it are still part of modern thinking and part of the romantic dialectic Reflecting on what he calls the end of the machine Coeckelbergh argues that to achieve a more profound critique of contemporary technologies and culture we need to explore not only different ways of thinking but also different technologies and that to accomplish the former we require the latter

Extending Mechanics to Minds Jon Doyle, 2006-05-22 This book deploys the mathematical axioms of modern rational mechanics to understand minds as mechanical systems that exhibit actual not metaphorical forces inertia and motion Using precise mental models developed in artificial intelligence the author analyzes motivation attention reasoning learning and communication in mechanical terms These analyses provide psychology and economics with new characterizations of bounded rationality provide mechanics with new types of materials exhibiting the constitutive kinematic and dynamic properties characteristic of different kinds of minds and provide philosophy with a rigorous theory of hybrid systems combining discrete and continuous mechanical quantities The resulting mechanical reintegration of the physical sciences that characterize human bodies and the mental sciences that characterize human minds opens traditional philosophical and modern computational questions to new paths of technical analysis

Department of the Army Pamphlet ,1980 *The Mental Health of Gifted Intelligent Machines* John Senior, Éva Gyarmathy, 2024-02-13 The Mental Health of Gifted Intelligent Machines explores the increasingly sophisticated behaviours of developing AI and how we can ensure it will have emotional resilience ethical strength and an ability to think in a new and enhanced way Its primary aim is to change how we understand the world by investigating humanity as an

intelligent being examining and contrasting human and artificial intelligence The book considers what we can learn from the likely mental health issues that will occur with increasingly sophisticated aspects of machine intelligence and how they will reflect the human condition It asks questions about our identity in a deeply uncertain and disruptive ever changing world how we will improve and enhance our psychological intelligence to meet the increasing complications and demands of the future and what we need to do now to be psychologically intelligent enough to live a full meaningful life in a new world evolving around us The book argues that changes in our understanding of mental health psychology and our view of intelligence will challenge huge aspects of our fundamental beliefs and assumptions and that it is essential we explore new arenas to further understand both our own human psychological issues and mental health as we develop gifted intelligent machines It is a must read for all students researchers and professionals involved with AI gifted education consciousness and mental health

The War of the Ghosts and Machines Mike Hockney, 2015-09 Are you a ghost or a machine You don't need to be a superstitious believer to support the side of the ghosts Machine people reduce everything to lifeless mindless purposeless atoms of matter the ultimate little machines For ghost people reality reduces to dimensionless mathematical singularities which are none other than the hyperrational monadic souls posited by Pythagoras and Leibniz Ghost people subscribe to atoms minds with atomic number zero i.e. minds souls are made of massless dimensionless photons Machine people start with hydrogen atoms with atomic number one All ghost entities are associated with zero and infinity All machine people deny the existence of zero and infinity Mathematically these are the two numbers where the ghosts and the machines collide head on This book is all about demonstrating that there are indeed ghosts in the machines

Automation 4.0: Object-oriented Development Of Modular Machines For Digital Production Thomas Schmertosh, Markus Krabbes, Christian Zinke-wehlmann, 2025-02-25 The fourth industrial revolution places a number of additional demands on the design and automation of processing machines Digitalization and automation are making products and their manufacturing processes not only more sophisticated but also more individual Growing demands on availability logistics quality and extreme price sensitivity are not leaving the production environment unscathed This book analyses the challenges and provides meaningful examples of solution scenarios for effective production in the age of Industry 4.0 Automation 4.0 shows readers how the requirements of Industry 4.0 may be projected onto known design principles The resulting functions are illustrated using real life examples from industry to create a roadmap for drawing up a specification sheet for the design of a versatile processing machine Numerous practical examples illustrate the modular function and object oriented design of individual machines and systems as a solution for increasing efficiency throughout their entire life cycle To this end a procedure for the design of versatile machines based on object and function oriented modularization is presented and illustrated and elaborated step by step on the basis of the requirements This book presents solution strategies that address the additional demands of modularization on the structure and component selection of automation systems

flexibly sustainably and with minimal engineering effort These include aspects of real time capability as well as machine safety and the selection of a suitable fieldbus human machine communication and the ability to interact in digital production Finally the topics of AI supported quality assurance simulation and digital twins are also addressed and the current state of research on the interaction of Industry 4 0 components is conveyed The book offers a comprehensive overview of the development of sustainable machines particularly in terms of cost effectiveness for very small batch sizes It is not only for students of automation technology and mechatronics but also for industrial development and design engineers **Crowds**

Machine Art in the Twentieth Century Andreas Broeckmann, 2016-12-23 An investigation of artists engagement with technical systems tracing art historical lineages that connect works of different periods Machine art is neither a movement nor a genre but encompasses diverse ways in which artists engage with technical systems In this book Andreas Broeckmann examines a variety of twentieth and early twenty first century artworks that articulate people's relationships with machines In the course of his investigation Broeckmann traces historical lineages that connect art of different periods looking for continuities that link works from the end of the century to developments in the 1950s and 1960s and to works by avant garde artists in the 1910s and 1920s An art historical perspective he argues might change our views of recent works that seem to

be driven by new media technologies but that in fact continue a century old artistic exploration Broeckmann investigates critical aspects of machine aesthetics that characterized machine art until the 1960s and then turns to specific domains of artistic engagement with technology algorithms and machine autonomy looking in particular at the work of the Canadian artist David Rokeby vision and image and the advent of technical imaging and the human body using the work of the Australian artist Stelarc as an entry point to art that couples the machine to the body mechanically or cybernetically Finally Broeckmann argues that systems thinking and ecology have brought about a fundamental shift in the meaning of technology which has brought with it a rethinking of human subjectivity He examines a range of artworks including those by the Japanese artist Seiko Mikami whose work exemplifies the shift
