Characters in Low-Dimensional Topology Olivier Collin, Stefan Friedl, Cameron Gordon, Stephan Tillmann, Liam

Watson, 2020-12-14 This volume contains the proceedings of a conference celebrating the work of Steven Boyer held from June 26 2018 at Universit du Qu bec Montr al Montr al Qu bec Canada Boyer's contributions to research in low dimensional geometry and topology and to the Canadian mathematical community were recognized during the conference The articles cover a broad range of topics related but not limited to the topology and geometry of 3 manifolds properties of their fundamental groups and associated representation varieties In the Tradition of Thurston II Ken'ichi Ohshika, Athanase

Papadopoulos, 2022-08-02 The purpose of this volume and of the other volumes in the same series is to provide a collection of surveys that allows the reader to learn the important aspects of William Thurston's heritage Thurston's ideas have altered the course of twentieth century mathematics and they continue to have a significant influence on succeeding generations of mathematicians The topics covered in the present volume include complex hyperbolic Kleinian groups Mbius structures hyperbolic ends cone 3 manifolds Thurston's norm surgeries in representation varieties triangulations spaces of polygonal decompositions and of singular flat structures on surfaces combination theorems in the theories of Kleinian groups hyperbolic groups and holomorphic dynamics the dynamics and iteration of rational maps automatic groups and the combinatorics of right angled Artin groups *Spaces of Kleinian Groups* Yair N. Minsky, Makoto Sakuma, Caroline

Series, 2006-06-19 The subject of Kleinian groups and hyperbolic 3 manifolds is currently undergoing explosively fast development the last few years having seen the resolution of many longstanding conjectures This volume contains important expositions and original work by some of the main contributors on topics such as topology and geometry of 3 manifolds curve complexes classical Ahlfors Bers theory computer explorations and projective structures Researchers in these and related areas will find much of interest here *Geometric Group Theory* Cornelia Druţu, Michael Kapovich, 2018-03-28 The key idea

in geometric group theory is to study infinite groups by endowing them with a metric and treating them as geometric spaces This applies to many groups naturally appearing in topology geometry and algebra such as fundamental groups of manifolds groups of matrices with integer coefficients etc The primary focus of this book is to cover the foundations of geometric group theory including coarse topology ultralimits and asymptotic cones hyperbolic groups isoperimetric inequalities growth of groups amenability Kazhdan's Property T and the Haagerup property as well as their characterizations in terms of group actions on median spaces and spaces with walls The book contains proofs of several fundamental results of geometric group theory such as Gromov's theorem on groups of polynomial growth Tits's alternative Stallings's theorem on ends of groups Dunwoody's accessibility theorem the Mostow Rigidity Theorem and quasiisometric rigidity theorems of Tukia and Schwartz This is the first book in which geometric group theory is presented in a form accessible to advanced graduate students and young research mathematicians It fills a big gap in the literature and will be used by researchers in geometric group theory and its applications Bounded Cohomology and Simplicial Volume Caterina Campagnolo, Francesco

Fournier-Facio, Nicolaus Heuer, Marco Moraschini, 2022-11-17 An overview of bounded cohomology and simplicial volume covering the basics of the subject and recent research directions *On the Algebraic Foundations of Bounded Cohomology*

Theo Bühler, 2011 It is a widespread opinion among experts that continuous bounded cohomology cannot be interpreted as a derived functor and that triangulated methods break down The author proves that this is wrong He uses the formalism of exact categories and their derived categories in order to construct a classical derived functor on the category of Banach G modules with values in Waelbroeck's abelian category This gives us an axiomatic characterization of this theory for free and it is a simple matter to reconstruct the classical semi normed cohomology spaces out of Waelbroeck's category The author proves that the derived categories of right bounded and of left bounded complexes of Banach G modules are equivalent to the derived category of two abelian categories one for each boundedness condition a consequence of the theory of abstract truncation and hearts of t structures Moreover he proves that the derived categories of Banach G modules can be constructed as the homotopy categories of model structures on the categories of chain complexes of Banach G modules thus proving that the theory fits into yet another standard framework of homological and homotopical algebra **On Knots** Louis H. Kauffman, 1987 *On Knots* is a journey through the theory of knots starting from the simplest combinatorial ideas ideas arising from the representation of weaving patterns From this beginning topological invariants are constructed directly first linking numbers then the Conway polynomial and skein theory This paves the way for later discussion of the recently discovered Jones and generalized polynomials The central chapter Chapter Six is a miscellany of topics and recreations Here the reader will find the quaternions and the belt trick a devilish rope trick Alhambra mosaics Fibonacci trees the topology of DNA and the author's geometric interpretation of the generalized Jones Polynomial Then come branched covering spaces the Alexander polynomial signature theorems the work of Casson and Gordon on slice knots and a chapter on knots and algebraic singularities The book concludes with an appendix about generalized polynomials *Splitting Deformations of Degenerations of Complex Curves* Shigeru Takamura, 2006-07-26 The author develops a deformation theory for degenerations of complex curves specifically he treats deformations which induce splittings of the singular fiber of a degeneration He constructs a deformation of the degeneration in such a way that a subdivider is barked peeled off from the singular fiber These barking deformations are related to deformations of surface singularities in particular cyclic quotient singularities as well as the mapping class groups of Riemann surfaces complex curves via monodromies Important applications such as the classification of atomic degenerations are also explained **Iteration of Rational Functions** Alan F. Beardon, 2000-09-27 This book focuses on complex analytic dynamics which dates from 1916 and is currently attracting considerable interest The text provides a comprehensive well organized treatment of the foundations of the theory of iteration of rational functions of a complex variable The coverage extends from early memoirs of Fatou and Julia to important recent results and methods of Sullivan and Shishikura Many details of the proofs have not appeared in print before
