Wright, Jayne Wilkins, Deborah I. Olszewski, 2023-08-17 This handbook showcases an Africa wide compendium of Stone Age archaeological sites and methodological advances that have improved our understanding of hominin lifeways and biogeography in the continent The focal time spans the Pleistocene Epoch c 2 5 million 11 700 years ago during which important human traits such as obligate bipedalism that freed the hands to engage in creative activities a large brain relative to body size language and social complexity developed in the general forms that they are found today The handbook is the first of its kind and it is expected to play a significant role in human evolutionary research by Collating the African Stone Age record which exists in a fragmented state along the lines of national boundaries and colonial experiences Showcasing emerging conceptual and methodological advances in African Pleistocene archaeology Providing reference datasets for teaching and researching African prehistory Making Africa s Stone Age record accessible to researchers and students based in Africa who may not have access to journal publications where most new field discoveries are published The Handbook features 128 chapters of which 116 are site entries grouped by the host countries and presented in an alphabetical order A number of those site related entries examine multiple archaeological localities lumped under specific projects or study areas The rest of the contributions deal with methodological topics such as luminescence and radiocarbon dating field data recovery lithic analysis micromorphology and hominin fossil and zooarchaeological records of Pleistocene Africa The introductory chapter provides an historical overview of the development of Stone Age Paleolithic archaeology in Africa beginning in the mid 19th century and paleoenvironmental and chronological frameworks commonly used to structure the

continent's Pleistocene record By making a good amount of African Stone Age literature accessible to researchers and the public we wish to promote interest in human evolutionary research in the continent and elsewhere Awarded the 2025 The Best Book Award by The Society of Africanist Archaeologists Eastern and Southern Africa Debby Potts, T.A.S. Bowyer-Bower, 2016-02-04 A unique and comprehensive introduction to contemporary development issues in East and Southern Africa and represents a significant departure from the often descriptive approach adopted by existing regional and development texts on African regions Each contribution is carefully chosen to highlight the theoretical basis to development issues and the practical problems of implementing development plans in this vital subregion Overall this produces comprehensive and balanced coverage of historical economic political and social issues The twin issues of globalisation and modernisation give the book a clear focus **Lakes of Africa** Mostafa El-Sheekh, Hosam Easa Elsaied, 2023-02-15 Lakes of Africa Microbial Diversity and Sustainability examines microbial ecosystems in African lakes including the history and formation of African lakes The book describes how environmental stressors including seasonal variations climate change and anthropogenic activities affect microbial ecosystem dynamics in African lakes and the microbial responses to these stressors The book explores and evaluates extremophiles in African lakes including industrial biotechnology applications The book highlights challenges facing microbial ecology in African lakes as well as the design of models for solving these problems and predicting the future of lake microbial ecosystem sustainability Includes unique case studies on both African lakes and brine lakes providing real life examples of the topics discussed Provides a foundational background to the topic Presents definitions throughout whenever a new term is introduced for a seamless reading experience and background information **Quest for the African Dinosaurs** Louis Jacobs, 2000-08-28 The story of one paleontologist's fossil digs in Africa and his unexpected findings Winner of the Colbert Award for the best adult book about dinosaurs Winner of the Colbert Award for the best adult book about dinosaurs Louis Jacobs reopened paleontologists' eyes to the African continent when he uncovered a major fossil site in the hills of Malawi in the 1980s During five digging seasons in Malawi and three in Cameroon Jacobs found the remains of two meat eating theropods two herbivorous sauropods an odd crocodile about the size of a Chihuahua and rare early mammals Now in paperback Quest for the African Dinosaurs includes Jacobs' new introduction which discusses recent developments in paleontological research in Africa GIWA Regional Assessments: East African Rift Valley Lakes, 2006 Geomorphology Mateo Gutierrez, 2012-12-07 This book provides a detailed coverage of the landforms of Planet Earth and the processes that shaped them The study of these morphologies some of which formed during past geological periods under environmental conditions very different from those of today makes it possible to reconstruct the evolution of relief and to infer environmental changes that have involved geological media the climate or human activity A major advance of Geomorphology in recent decades is the development of techniques that make it possible to quantify morphogenetic processes and rates at which forms change under different environmental conditions The development of Geochronology or

absolute dating methods is helping us correct the limitations of relative dating that have prevailed in Geomorphology for many years. The ability to assign numerical ages to both landforms and deposits opens up multiple possibilities for reconstructing the evolution of relief, making correlations, calculating rates and estimating recurrence periods. A theme of major concern facing people today is the possible warming of the planet due to the release of greenhouse gases into the environment. Investigations conducted by the scientific community show that this temperature increase is at least partially anthropogenic. Given this more than probable cause and effect relationship, the most sensible and prudent path is to design and apply mitigation measures to alleviate this heating that can negatively affect both the natural environment and human society. The information that Geomorphology can provide on the recent past. Historical Geomorphology may be very useful in making predictions on the activity of these potentially dangerous processes in the future and on the possible effects of environmental changes. The aim of this book is to provide a general vision of the multiple aspects of Geomorphology and to provide a methodological foundation to approach the study of various branches of geomorphology. To this end, the book contains a basic bibliography that can be used for future research. In addition, applied aspects of Geomorphology are covered at the end of each chapter to provide knowledge of the activities of geomorphologists in the professional world. **PTE**

Revision Social Studies , The Gregory Rift Valley and Neogene-recent Volcanoes of Northern Tanzania John Barry Dawson, 2008. The structure and volcanic activity of the northern Tanzania sector of the Gregory Rift Valley have hitherto been less well described than those in Ethiopia and Kenya. This book focuses on northern Tanzania where, although the volcanic area is smaller than those to the north, there are major features such as Kilimanjaro, the highest mountain on the African continent; Ngorongoro, one of the largest calderas on Earth; and Oldoinyo Lengai, the world's only active carbonatite volcano. Following an account of the discovery and early exploration of the rift valley, there are descriptions of the individual volcanoes. These are set within the context of the regional geology and geophysics of the rift valley and in relation to the structural evolution of the rift and its associated sedimentary basins, which include Olduvai, an important site in the history of human evolution. The volume concludes with a discussion of the volcanism as related to the plume-related African Superswell.

The Afar Volcanic Province Within the East African Rift System G. Yirgu, Cindy J. Ebinger, P. K. H. Maguire, 2006. The seismically and volcanically active East African Rift System is an ideal laboratory for continental break-up processes; it encompasses all stages of rift development. Its northernmost sectors within the Afar volcanic province include failed rifts, nascent sea floor spreading and youthful passive continental margins associated with one or more mantle plumes. A number of models have been proposed to explain the success and failure of continental rift zones, but there remains no consensus on how strain localizes to achieve rupture of initially 125–250 km thick plates or on the interaction between the plates and asthenospheric processes. This collection of papers provides new structural, stratigraphic, geochemical and geophysical data and numerical models needed to resolve fundamental questions concerning continental break-up and mantle plume processes.

The focus is on how mantle melt intrudes and is distributed through the plate and how this magma intrusion process controls along axis segmentation and facilitates break up

Geodynamics of Rifting P.A. Ziegler, 2015-12-04 This volume contains papers giving an interdisciplinary review of 12 major rift systems from North and South America Africa Europe and Asia These papers are written by an international group of academic and industrial specialists each of whom is most knowledgeable about the respective rift The analyzed rifts were selected on the basis of availability of an as complete as possible geological and geophysical data base Thirteen papers deal with geodynamic processes governing the evolution of rifts A comprehensive digest of the available stratigraphic structural geophysical and petrological data together with an extensive list of references is provided for each of the analyzed rift systems The megatectonic setting and dynamics of evolution of each basin is discussed Geodynamic models are tested against the record of the analyzed rifts The question of active as against passive rifting is addressed The rifts analyzed range in age from Precambrian to Recent and cover a wide spectrum of megatectonic settings There is discussion of the evolution of rifts in a plate tectonic frame The case histories are followed by discussions addressing the global setting of rifts and geodynamic processes active during the development of rifted basins

Fluorosis Research Strategies Sopiato Likimani,1984 **Climatic Geomorphology** M. Gutierrez Elorza,2005-12-29

During the past few decades climatic geomorphology has been substantially enlarged in knowledge thanks to numerous detailed investigations the application of a large number of techniques and the acquisition of abundant absolute dates The challenge of predicting the effects of the prophesied future global warming on morphogenetic processes and landforms has encouraged geomorphologists to study the Late Pleistocene and Holocene climatic changes from the geomorphological and geological record The advances achieved in the field of climatic geomorphology during the past years are reflected by the publication of several specific monographs about the different morphoclimatic zones The aim of this book is to provide an up to date general view of this branch of geomorphology It includes a chapter on applied geomorphology for each morphoclimatic zone providing an approximation of the main environmental problems Geoscientists geomorphologists

Geology of National Parks of Central/Southern Kenya and Northern Tanzania Roger N. Scoon,2018-04-09 This book describes the interrelationship between the spectacular geology of an area of East Africa that includes a branch of the rift valley as well as giant freestanding ice capped mountains and extraordinarily toxic alkaline lakes and some of the greatest concentrations of wildlife on Earth It suggests that geological processes that have shaped the iconic landforms including active volcanoes may also be responsible for the unusually diverse speciation which characterises the region Moreover it is not a coincidence that important palaeoanthropological discoveries have been unearthed in the region National parks and conservation areas have tremendous potential for geotourism and the book assists both tour guides and visitors in this regard In addition the book may provide a better understanding to management of the importance of geology for sustaining wildlife **Geography** ,1982 Includes section Reviews and other bibliographical material **Continental**

Rifts: Evolution, Structure, Tectonics K.H. Olsen,1995-11-24 This multi author book has been prepared by an international group of geoscientists that have been active in rift research since the late 1960s In 1984 an informal grass roots study group was initiated to compare individual research results and to explore in greater depth the apparent differences and similarities in the interpretations from various rift systems The group became known as the CREST working group an acronym of Continental Rifts Evolution Structure and Tectonics which not surprisingly became the title of this book Continental Rifts Evolution Structure Tectonics presents an overview of the present state of understanding and knowledge of the processes of continental rifting from a multidisciplinary lithospheric scale perspective The chapters have been structured on each rift system in approximately the same synoptic sequence so as to facilitate comparisons of rifts by the reader The book complements its predecessors by presenting a more unified picture It succeeds in presenting the status of a

representative majority of the continental rift systems that have been at the forefront of recent research For students and experienced researchers alike this book will be of significant value in assessing the current state of knowledge and in serving as a framework for future research **Geoscientific Research in Northeast Africa** Heinz Schandelmeier,Ulf

Thorweihe,2017-12-14 This volume focuses on approaches towards a better understanding of the geological hydrogeological and paleoclimatic evolution of Northeast Africa Among the topics discussed are Phanerozoic interplate dynamics sedimentology and stratigraphy and mineral deposits and metallogeny *Fluvial Megafans on Earth and Mars* Justin

Wilkinson,Yanni Gunnell,2023-05-18 An inventory of nearly 300 megafans across five continents describing the major morphological attributes of megafans and multi megafan landscapes It examines the controls on megafan development and discusses the application of megafan research to aquifers as well as economic and planetary geology including layered deposits on Mars
