Games Patrick Jagoda, 2020-12-07 In our unprecedentedly networked world games have come to occupy an important space in many of our everyday lives Digital games alone engage an estimated 2.5 billion people worldwide as of 2020 and other forms of gaming such as board games role playing escape rooms and puzzles command an ever expanding audience At the same time gamification the application of game mechanics to traditionally nongame spheres such as personal health and fitness shopping habit tracking and more has imposed unprecedented levels of competition repetition and quantification on daily life Drawing from his own experience as a game designer Patrick Jagoda argues that games need not be synonymous with gamification He studies experimental games that intervene in the neoliberal project from the inside out examining a broad variety of mainstream and independent games including StarCraft Candy Crush Saga Stardew Valley Dys4ia Braid and Undertale Beyond a diagnosis of gamification Jagoda imagines ways that games can be experimental not only in the sense of problem solving but also the more nuanced notion of problem making that embraces the complexities of our digital present The result is a game changing book on the sociopolitical potential of this form of mass entertainment Straight Choices

Ben R. Newell, David A. Lagnado, David R. Shanks, 2015-06-12 Should I have this medical treatment or that one Is this computer a better buy than that one Should I invest in shares or keep my money under the bed We all face a perplexing array of decisions every day Thoroughly revised and updated throughout the new edition of Straight Choices provides an integrative account of the psychology of decision making and shows how psychological research can help us understand our uncertain world Straight Choices emphasises the relationship between learning and decision making arguing that the best way to understand how and why decisions are made is in the context of the learning and knowledge acquisition which precedes them and the feedback which follows The mechanisms of learning and the structure of environments in which decisions are made are carefully examined to explore their impact on our choices The authors then consider whether we are all constrained to fall prey to cognitive biases or whether with sufficient exposure we can find optimal decision strategies and

improve our decision making Featuring three completely new chapters this edition also contains student friendly overviews and recommended readings in each chapter It will be of interest to students and researchers in cognitive psychology behavioral economics and the decision sciences as well as anyone interested in the nature of decision making **MEDINFO 2017: Precision Healthcare Through Informatics** A.V. Fréchette,Andrew Schotter,2015-01-02 The Handbook of Experimental Economic Methodology edited by Guillaume R Fr chette and Andrew Schotter aims to confront and debate the issues faced by the growing field of experimental economics For example as experimental work attempts to test theory it raises questions about the proper relationship between theory and experiments As experimental results are used to inform policy the utility of these results outside the lab is questioned and finally as experimental economics tries to integrate ideas from other disciplines like psychology and neuroscience the question of their proper place in the discipline of economics becomes less clear This book contains papers written by some of the most accomplished scholars working at the intersection of experimental behavioral and theoretical economics talking about methodology It is divided into four sections each of which features a set of papers and a set of comments on those papers The intention of the volume is to offer a place where ideas about methodology could be discussed and even argued Some of the papers are contentious a healthy sign of a dynamic discipline while others lay out a vision for how the authors think experimental economics should be pursued This exciting and illuminating collection of papers brings light to a topic at the core of experimental economics Researchers from a broad range of fields will benefit from the exploration of these important questions *Variability in language predictions: Assessing the influence of speaker, text and experimental method* Franziska Kretzschmar,Martine Grice,Phillip M. formation in dynamic market experiments Peter Heemeijer, 2009 Diversity of Experimental Methods in Economics

Toshiji Kawagoe, Hirokazu Takizawa, 2019-02-09 This is the first book that examines the diverse range of experimental methods currently being used in the social sciences gathering contributions by working economists engaged in experimentation as well as by a political scientist psychologists and philosophers of the social sciences Until the mid twentieth century most economists believed that experiments in the economic sciences were impossible But that's hardly the case today as evinced by the fact that Vernon Smith an experimental economist and Daniel Kahneman a behavioral economist won the Nobel Prize in Economics in 2002 However the current use of experimental methods in economics is more diverse than is usually assumed As the concept of experimentation underwent considerable abstraction throughout the twentieth century the areas of the social sciences in which experiments are applied are expanding creating renewed interest in and multifaceted debates on the way experimental methods are used This book sheds new light on the diversity of experimental methodologies used in the social sciences The topics covered include historical insights into the evolution of experimental methods the necessary performativity of experiments i.e. the dynamic interaction with the social contexts in which they are embedded the application of causal inferences in the social sciences a comparison of laboratory field and natural experiments and the recent use of randomized controlled trials RCTs in development economics Several chapters also deal with the latest heated debates such as those concerning the use of the random lottery method in laboratory experiments
