Governments have the challenging task of deciding which companies should be awarded exclusive rights to explore, develop, and produce their petroleum resources, and on what conditions such rights should be awarded. This paper analyzes the available evidence on the advantages and disadvantages of various systems used by petroleum-producing countries to allocate petroleum exploration, development, and production rights, and considers the policy implications of each system. The experience of six petroleum-producing countries is presented in detail, and numerous other examples are provided to derive lessons of wider applicability. The paper presents various conclusions for policy makers about the optimal design of allocation systems. **product guide SUMMER 2008** ,

Decision and Prediction Analysis Powered With Operations Research Bubevski, Vojo, 2024-07-16 Organizations today face complex decisions and uncertainties that can have a profound impact on their financial stability and strategic direction. Traditional decision-making methods often fall short when it comes to addressing multifaceted issues like financing, product manufacturing, and facility location. These challenges demand a robust framework that quantifies factors, assesses risks, and provides optimal solutions. Without advanced tools and techniques, businesses are at risk of making uninformed decisions that could lead to significant financial losses and missed opportunities. The urgency to equip yourself with these tools is clear. Decision and Prediction Analysis Powered With Operations Research offers a comprehensive solution to these challenges. This book integrates operations research techniques to reframe and solve complex business problems. It provides a detailed exploration of decision analysis tools such as influence diagrams and decision trees, which help visualize and assess various

decision scenarios By applying these tools organizations can better understand uncertainties evaluate risks and make decisions that maximize expected utility and achieve strategic objectives *Extracting Innovations* Martin J. Clifford, Robert K. Perrons, Saleem H. Ali, Tim A. management of risk in all fields **Understanding Oil and Gas Shows and Seals in the Search for Hydrocarbons** John Dolson, 2016-06-15 This book explains in detail how to use oil and gas show information to find hydrocarbons. It covers the basics of exploration methodologies, drilling and mud systems, cuttings and mud gas show evaluation, fundamental log analysis, the pitfalls of log calculated water saturations, and a complete overview of the use of pressures to understand traps and migration, hydrodynamics, and seal and reservoir quantification using capillary pressure. Also included are techniques for quickly generating pseudo capillary pressure curves from simple porosity permeability data, with examples of how to build spreadsheets in Excel and a complete treatment of fluid inclusion analysis and fluid inclusion stratigraphy to map migration pathways. In addition, petroleum systems modeling and fundamental source rock geochemistry are discussed in depth, particularly in the context of unconventional source rock evaluation and screening tools for entering new plays. The book is heavily illustrated with numerous examples and case histories from the author's 37 years of exploration experience. The topics covered in this book will give any young geoscientist a quick start on a successful career and serve as a refresher for the more experienced explorer.

Reservoir Management Steve Cannon, 2021-03-22 Reservoir management is fundamental to the efficient and responsible means of extracting hydrocarbons and maximising the economic benefit to the operator, licence holders, and central government. All stakeholders have a social responsibility to protect the local population and environment. The process of managing an oil or gas reservoir begins after discovery and continues through appraisal, development, production, and abandonment; there is cost associated with each phase, and a series of decision gates should be in place to ensure that an economic benefit exists before progress is made. To correctly establish potential value at each stage, it is necessary to acquire and analyse data from the subsurface, the planned surface facilities, and the contractual obligations to the end user of the hydrocarbons produced. This is especially true of any improved recovery methods proposed or plans to extend field life. To achieve all the above requires a multi-skilled team of professionals working together with a clear set of objectives and associated rewards. The team's make-up will change over time as different skills are required, as will the management of the team, with geoscientists, engineers, and commercial analysts needed to address the issues as they arise. This book is designed as a guide for non-specialists involved in the process of reservoir management, which is often treated as a task for reservoir engineers alone; it is a task for all the disciplines involved in turning an exploration success into a commercial asset. Most explorers earn their bonus based on the initial estimates of in-place hydrocarbons, regardless of the ultimate cost of production; the explorers have usually moved on to a new basin before the first oil or gas is produced. This book is not a deeply academic tome; rather, the description of a process enlivened by a number of stories and case studies from the author's forty years of experience in the oil patch.
