Risk And Society The Interaction Of Science Technology And Public Policy:

Risk and Society: The Interaction of Science, Technology and Public Policy M Waterstone, 2012-12-06 Life in the last quarter of the twentieth century presents a baffling array of complex issues The benefits of technology are arrayed against the risks and hazards of those same technological marvels frequently though not always arising as side effects or by products This confrontation poses very difficult choices for individuals as well as for those charged with making public policy Some of the most challenging of these issues result because of the ability of technological innovation and deployment to outpace the capacity of institutions to assess and evaluate implications In many areas the rate of technological advance has now far outstripped the capabilities of institutional monitoring and control While there are many instances in which technological advance occurs without adverse consequences and in fact yields tremendous benefits frequently the advent of a major innovation brings a wide array of unforeseen and to some undesirable effects This problem is exacerbated as the interval between the initial development of a technology and its deployment is shortened since the opportunity for cautious appraisal is decreased Understanding Regulation Robert Baldwin, Martin Cave, Martin Lodge, 2012 An introduction to the practical and theoretical issues that are central to the study of regulation which a particular focus on contested areas and how they are dealt with **Communication Yearbook 18** Brant R. Bursell, 2012-03-22 Communication Yearbook 18 originally published in 1995 focuses on cognitive approaches to the study of human communication examining topics such as the formation of interaction goals cognitive models of message production mindfulness and mindlessness in message processing and attention to televised messages Sections two and three concentrate on the communicative management of health and environmental risks critical analyses of classical approaches to risk communication and the ways in which people are connected through diverse forms of communicative behavior including supportive relationships electronic mail systems and ideologies Commentaries in each section provide alternative perspectives on the state of research extend issues of significance and help engage the reader with contemporary debates Deliberative Democracy for the Future Genevieve Fuji Johnson, 2008-01-01 The theory of deliberative democracy promotes the creation of systems of governance in which citizens actively exchange ideas engage in debate and create laws that are responsive to their interests and aspirations While deliberative processes are being adopted in an increasing number of cases decision making power remains mostly in the hands of traditional elites In *Democratic Illusion* Genevieve Fuji Johnson examines four representative examples participatory budgeting in the Toronto Community Housing Corporation Deliberative Polling by Nova Scotia Power Incorporated a national consultation process by the Canadian Nuclear Waste Management Organization and public consultations embedded in the development of official languages policies in Nunavut In each case measures that appeared to empower the public failed to challenge the status quo approach to either formulating or implementing policy Illuminating a critical gap between deliberative democratic theory and its applications this timely and important study shows what needs to be done to ensure

deliberative processes offer more than the illusion of democracy Cross-Cultural Risk Perception Ortwin Renn, Bernd Rohrmann, 2000-01-31 Cross Cultural Risk Perception demonstrates the richness and wealth of theoretical insights and practical information that risk perception studies can offer to policy makers risk experts and interested parties The book begins with an extended introduction summarizing the state of the art in risk perception research and core issues of cross cultural comparisons The main body of the book consists of four cross cultural studies on public attitudes towards risk in different countries including the United States Australia New Zealand France Germany Sweden Bulgaria Romania Japan and China The last chapter critically discusses the main findings from these studies and proposes a framework for understanding and investigating cross cultural risk perception Finally implications for communication regulation and management are outlined The two editors sociologist Ortwin Renn Center of Technology Assessment Germany and psychologist Bernd Rohrmann University of Melbourne Australia have been engaged in risk research for the last three decades They both have written extensively on this subject and provided new empirical and theoretical insights into the growing body of international risk perception research **Political Ecology** David Bell, Leesa Fawcett, Roger Keil, Peter Penz, 2005-08-18 Political Ecology addresses environmental issues which Innis was concerned with from a contemporary political economy perspective They explore a wide range of themes and issues including sustainability risk and regulation population growth planetary management impact of humanity on environment role of technology and communication Case studies provide further insight into issues such as industrial racism women and development and collective action by highlighting ethical and political questions and providing critical insights into the issues and debates in political ecology *Future Risks and Risk Management* B. Brehmer, N.E. Sahlin, 2013-04-17 Future Risks and Risk Management provides a broad perspective on risk including basic philosophical issues concerned with values psychological issues such as the perception of risk the factors that generate risks in current and future technological and social systems including both technical and organizational factors No other volume adopts this broad perspective Future Risks and Risk Management will be useful in a variety of contexts both for teaching and as a source book for the risk professional needing to be informed of the broader issues in the field

Counting Civilian Casualties Taylor B. Seybolt, Jay D. Aronson, Baruch

Fischhoff, 2013-05-14 A popular myth emerged in the late 1990s in 1900 wars killed one civilian for every eight soldiers while contemporary wars were killing eight civilians for every one soldier The neat reversal of numbers was memorable and academic publications and UN documents regularly cited it The more it was cited the more trusted it became In fact however subsequent research found no empirical evidence for the idea that the ratio of civilians to soldiers killed in war has changed dramatically But while the ratios may not have changed the political significance of civilian casualties has risen tremendously Over the past century civilians in war have gone from having no particular rights to having legal protections and rights that begin to rival those accorded to states The concern for civilians in conflict has become so strong that governments occasionally undertake humanitarian interventions at great risk and substantial cost to protect strangers in distant lands In the early 1990s the UN Security Council authorized military interventions to help feed and protect civilians in the Kurdish area of Iraq Somalia and Bosnia And in May 2011 Barack Obama's National Security Advisor explained the United States decision to support NATO's military intervention in these terms When the president made this decision there was an immediate threat to 700 000 Libyan civilians in the town of Benghazi We've had a success here in terms of being able to protect those civilians Counting Civilian Casualties aims to promote open scientific dialogue by highlighting the strengths and weaknesses of the most commonly used casualty recording and estimation techniques in an understandable format Its thirteen chapters each authoritative but accessible to nonspecialists explore a variety of approaches from direct recording to statistical estimation and sampling to collecting data on civilian deaths caused by conflict The contributors also discuss their

respective advantages and disadvantages and analyze how figures are used and misused by governments rebels human rights advocates war crimes tribunals and others In addition to providing analysts with a broad range of tools to produce accurate data this will be an invaluable resource for policymakers military officials journalists human rights activists courts and ordinary people who want to be more informed and skeptical consumers of casualty counts *Managing the Global Commons Decision Making and Conflict Resolution in Response to Climate Change* Steve Rayner,1990 Intercultural Interactions in the Multicultural Workplace Małgorzata Rozkwitalska,Łukasz Sułkowski,Slawomir Magala,2016-10-01 This volume explores the work environment in multinational corporations To do so it integrates studies on the organizational sciences cross cultural management positive psychology and sociology within a single comprehensive framework Twenty two authors from six countries identify the challenges in multicultural workplaces the positives of interactions cultural clashes and their organizational preconditions They add inter organizational institutional and critical perspectives to the analysis within the framework of multinationals and complex hybrid cultural environments The book addresses the needs of researchers in the areas of intercultural management and those of practitioners in international human resource management **Science, Technology and Society** Wenceslao J. González,2005 The emphasis on the realm of Science Technology and Society or Science and Technology Studies may have the same degree of relevance that the historical turn had in the past It is a social turn which affects philosophy of science as well as philosophy of technology It includes a new vision of the aims processes and results of scientific activities and technological doings because the focus of attention is on several aspects of science and technology which used to be considered as secondary or even irrelevant This turn highlights science and technology as social undertakings rather than intellectual contents According to this new vision there are several important changes as to what should be studied the objects of research how it should be studied the method and what the consequences for those studies are The new focus of attention can be seen in many changes and among them are several of special interest a from what science and technology are in themselves mainly epistemic contents to how science and technology are made largely social constructions b from the language and structure of basic science to the characteristics of applied science and the applications of science c from technology as a feature through which human beings control their natural surroundings a step beyond technics due to the contribution of science to technology as a social practice and an instrument of power and d from the role of internal values necessary for mature science and innovative technology to the role of contextual or external values cultural political economic of science and technology Wenceslao J Gonzalez is professor of logic and philosophy of science at the University of A Coruña Spain He has been vicedean of the School of Humanities and president of the Committee of Doctoral Programs at the University He has been a visiting researcher at the Universities of St Andrews Münster and London London School of Economics as well as Visiting fellow at the Center for Philosophy of Science University of Pittsburgh He has given lectures at the Universities of Pittsburgh Stanford Quebec and Helsinki The

Pandemic Communication and Resilience David M. Berube,2021-08-07 This book examines how we design and deliver health communication messages relating to outbreaks epidemics and pandemics We have experienced major changes to how the public receives and searches for information about health crises over the last twelve decades with the ongoing shift from text broadcast based to digital messaging and social media Both health theories and practices are examined as it applies to testing tracking hoarding therapeutics and vaccines with case studies Challenges to communicate about health to diverse audiences including the science illiterate and across both Western and developing economies have been complicated by politics norms and mores personal heuristics and biases such as mortality salience news avoidance and quarantine fatigue Issues of economic development and land use trade and transportation and even climate change have increased the exposure of human populations to infectious diseases making risk and resilience more pressing The book has been designed to support health communicators and public health management professionals students and interested stakeholders and university libraries

Quotas in International Environmental Agreements Amanda Wolf,2014-04-23 Quotas have been used in international environmental agreements for at least a century and in tandem with incentive approaches should continue to be crucial to realizing a sustainable environment This text is a critical examination of quotas both as regulatory tools and as products of negotiation It reviews the main features of environmental problems the regulatory options and criteria used to judge them and the various ways of explaining negotiated outcomes Quotas in the management of fisheries other resources freshwater and marine pollution and air pollution are also described Selected examples are considered in detail to provide an understanding of how quotas were developed in scientific political economic and social context An assessment of the key features of quotas in practice leads to the identification of an emerging approach the negotiation of constrained local quotas The approach is a practical way to balance efficiency and fairness in complex negotiations without sacrificing environmental effectiveness

Learning for sustainability in times of accelerating change Arjen E.J. Wals,Peter Blaze Corcoran,2023-09-04 We live in turbulent times our world is changing at accelerating speed Information is everywhere but wisdom appears in short supply when trying to address key inter related challenges of our time such as runaway climate change the loss of

biodiversity the depletion of natural resources the on going homogenization of culture and rising inequity Living in such times has implications for education and learning This book explores the possibilities of designing and facilitating learning based change and transitions towards sustainability In 31 chapters contributors from across the world discuss re emerging forms of learning that not only assist in breaking down unsustainable routines forms of governance production and consumption but also can help create ones that are more sustainable The book has been divided into three parts re orienting science and society re connecting people and planet and re imagining education and learning This is essential reading for educators educational designers change agents researchers students policymakers and entrepreneurs alike who are concerned about the well being of the planet and convinced of our ability to do better The content and related issues can be discussed on the blog by editor Arjen Wals Transformative learning We are living in times of incertitude complexity and contestation but also of connectivity responsibility and new opportunities This book analyses the consequences of these times for learning in formal non formal and informal education It explores the possibilities offered by the concept of sustainability as a central category of a holistic paradigm which harmonizes human beings with Earth To change people and to change the world are interdependent processes this book contributes to both Moacir Gadotti Director of Paulo Freire Institute S o Paulo Brazil I hope you share my excitement about the innovations for sustainability that this book catalogues and analyses While the ecological news is grim the human news is not Even in a time of accelerating change people are showing their enormous capacities to learn adapt restore and protect From the Foreword by Juliet Schor author of True Wealth how and why millions of Americans are creating a time rich ecologically light small scale high satisfaction economy This book implies a culture of critical commitment in educational thinking and practice engaged enough to make a real difference to social ecological resilience and sustainability but reflexively critical enough to learn constantly from experience and to keep options open in working for a sustainability transformation From the Afterword by Stephen Sterling Professor of Sustainability Education Centre for Sustainable Futures Plymouth University United Kingdom
