Dam Safety Risk Assessment Modeling with Uncertainty Analysis Sanjay Singh Chauhan, 1999 [Dam Safety Management / Gestion de la Sécurité des Barrages](#) Cigb Icold, 2021-06-11 Dam Safety Management is a major concern during the entire lifetime cycle of a dam scheme This is particularly true for the operational phase of the scheme that represents by far the longest period in its lifetime cycle Bulletin 154 presented a general approach and concepts to be applied to dam operation The current Bulletin 175 extends the developed concepts to all phases preceding the operational phase Many risks associated with the operation of existing dams have their origins in other phases preceding the actual operation Although there are numerous ICOLD Bulletins addressing technical aspects of planning design construction and commissioning of dams there is not a single Bulletin which covers the subject in a comprehensive manner The current document is a first attempt to capture all relevant dam safety aspects in all preoperational phases by systematically characterizing the actors involved their roles the activities and complex interactions present in different phases of the dam lifecycle An Overarching Safety Management System is specifically developed that can be applied to all actors involved La gestion de la s curit des barrages est une pr occupation majeure pendant tout le cycle de vie d un projet de barrage Cela est particuli rement vrai pour la phase op rationnelle du syst me qui repr sente de loin la p riode la plus longue de son cycle de vie Le Bulletin 154 pr sente une approche g n rale et des concepts appliquer l exploitation des barrages Le Bulletin 175 actuel tend les concepts d velopp s toutes les phases pr c dant la phase d exploitation De nombreux risques associ s l exploitation des barrages existants ont leur

origine dans d'autres phases précédant l'exploitation proprement dite. Bien qu'il existe de nombreux bulletins ICOLD traitant des aspects techniques de la planification, de la conception, de la construction et de la mise en service des barrages, il n'existe pas un seul bulletin qui couvre le sujet de manière exhaustive. Le document actuel est une première tentative de capturer tous les aspects pertinents de la sécurité des barrages dans toutes les phases opérationnelles en caractérisant systématiquement les acteurs impliqués, leurs rôles, les activités et les interactions complexes présentes dans les différentes phases du cycle de vie du barrage. Un système global de gestion de la sécurité est spécifiquement développé et peut être appliqué à tous les acteurs impliqués.

Geotechnical Risk and Safety Yusuke Honjo, Makoto Suzuki, Takashi Hara, Feng Zhang, 2009-06-01. Communication of risks within a transparent and accountable framework is essential in view of increasing mobility and the complexity of the modern society and the field of geotechnical engineering does not form an exception. As a result, modern risk assessment and management are required in all aspects of geotechnical issues such as planning, design, construction of geotechnical structures, mitigation of geo-hazards, management of large construction projects, maintenance of structures and life cycle cost evaluation. This volume discusses: 1. Evaluation and control of uncertainties through investigation, design and construction of geotechnical structures; 2. Performance based specifications, reliability based design and limit state design of geotechnical structures and design code developments; 3. Risk assessment and management of geo-hazards such as landslides, earthquakes, debris flow etc; 4. Risk management issues concerning large geotechnical construction projects; 5. Repair and maintenance strategies of geotechnical structures. Intended for researchers and practitioners in geotechnical, geological infrastructure and construction engineering.

Modelling Under Risk and Uncertainty Etienne de Rocquigny, 2012-04-30

Modelling has permeated virtually all areas of industrial environmental economic bio medical or civil engineering yet the use of models for decision making raises a number of issues to which this book is dedicated How uncertain is my model Is it truly valuable to support decision making What kind of decision can be truly supported and how can I handle residual uncertainty How much refined should the mathematical description be given the true data limitations Could the uncertainty be reduced through more data increased modeling investment or computational budget Should it be reduced now or later How robust is the analysis or the computational methods involved Should could those methods be more robust Does it make sense to handle uncertainty risk lack of knowledge variability or errors altogether How reasonable is the choice of probabilistic modeling for rare events How rare are the events to be considered How far does it make sense to handle extreme events and elaborate confidence figures Can I take advantage of expert phenomenological knowledge to tighten the probabilistic figures Are there connex domains that could provide models or inspiration for my problem Written by a leader at the crossroads of industry academia and engineering and based on decades of multi disciplinary field experience *Modelling Under Risk and Uncertainty* gives a self consistent introduction to the methods involved by any type of modeling development acknowledging the inevitable uncertainty and associated risks It goes beyond the black box view that some analysts modelers risk experts or statisticians develop on the underlying phenomenology of the environmental or industrial processes without valuing enough their physical properties and inner modelling potential nor challenging the practical plausibility of mathematical hypotheses conversely it is also to attract environmental or engineering modellers to better handle model confidence issues through finer statistical and risk analysis

material taking advantage of advanced scientific computing to face new regulations departing from deterministic design or support robust decision making Modelling Under Risk and Uncertainty Addresses a concern of growing interest for large industries environmentalists or analysts robust modeling for decision making in complex systems Gives new insights into the peculiar mathematical and computational challenges generated by recent industrial safety or environmental control analysis for rare events Implements decision theory choices differentiating or aggregating the dimensions of risk aleatory and epistemic uncertainty through a consistent multi disciplinary set of statistical estimation physical modelling robust computation and risk analysis Provides an original review of the advanced inverse probabilistic approaches for model identification calibration or data assimilation key to digest fast growing multi physical data acquisition Illustrated with one favourite pedagogical example crossing natural risk engineering and economics developed throughout the book to facilitate the reading and understanding Supports Master PhD level course as well as advanced tutorials for professional training Analysts and researchers in numerical modeling applied statistics scientific computing reliability advanced engineering natural risk or environmental science will benefit from this book *The International Journal on Hydropower & Dams* ,2005

Vasiliev,P.H.A.J.M.van Gelder,E.J. Plate,M.V. Bolgov,2007-06-17 This proceedings contains the papers which were presented at the NATO Advanced Research Workshop ARW on Extreme Hydrological Events New Concepts for Security which was held in Novosibirsk Russia

from July 11 15 2005 The workshop fell within the NATO priority research topic on Environmental Security Disaster Forecast and Prevention At the present time the necessity of considerable deepening of our understanding about the nature of extreme and catastrophic natural and man induced events in particular hydrologic ones becomes very topical as well as the development of advanced methods for their prediction including estimating probability of their occurrence and a risk related to them Another aspect of this hydrological problem is reducing of vulnerability of social economic and engineering systems to the extreme hydrologic events EHE and decreasing of a degree of their effect on such systems Dealing with these problems needs further refining existing tools for prediction and forecasting of EHE It can be done essentially through revealing mechanisms of their generation and with use of new approaches and methodologies in related branches of hydrology This ARW is targeted to contribute to the critical analysis and assessment of current knowledge on a number of the key issues of hydrology such as extreme hydrological phenomena problems of floods low flows and droughts In view of significant economic losses and actually wide geographical occurrence investigation of these hydrological phenomena is of great scientific and practical importance
