Risques Et Catastrophes Observer Spatialiser Comprendre Gerer:

Risques et catastrophes André Dauphiné, Damien Provitolo, 2013-08-07 Les termes risque et catastrophe signifient une potentialité et une réalité qui ne se recouvrent pas Le risque persistant et étendu dans l'espace se différencie de la catastrophe souvent brève et de formes irrégulières Cet ouvrage entièrement revu vient faire le point sur ces notions complexes La première partie Observer insiste sur les concepts et les nouvelles approches Elle présente la résilience comme un nouveau mode de gestion des risques et efface les distinctions qui séparent le domaine physique du champ social Elle est galement consacrée aux représentations et perceptions des risques et catastrophes Dans la deuxième partie Spatialiser les risques et les catastrophes sont examinés sous différentes échelles celles des zones et des aires de civilisation des milieux littoraux et montagnards et plus encore des villes La troisième partie Comprendre propose des analyses comparatives variées qui permettent de rapprocher des risques perçus comme différents Puis les nouvelles théories générales de la complexité sont invoquées pour comprendre des catastrophes aussi différentes que les séismes les pandémies ou les violences urbaines Ces comparaisons sont enfin privilégiées dans la quatrième partie Gérer qui analyse les politiques de gestion lors des phases de prévision de prévention de secours puis de reconstruction en intégrant les mesures les plus récentes au niveau français et européen En conclusion des actions sont proposées pour améliorer le dispositif de lutte contre les catastrophes en France

Territorial Crisis Management Richard Laganier, Yvette Veyret, 2022-09-14 Our societies have become very crisis prone This book explores crises and the methods of anticipation management and reconstruction and considers a risk crisis territorial development continuum The aim is to better understand a widely used concept and clarify the methods of action in the field of crisis management The different forms of learning proposed to better face future crises are also questioned This book invites us to analyze the resources available to support crisis management and reconstruction and consider the unequal access to these resources in different territories in order to design future territorial strategies This often results in a form of territorial inertia after the crises However some innovators imagine renewed territories prepare for reconstruction or even recompose territories now in order to make them more resilient The crisis can then be the driving force or the accelerator of these changes and contribute to the emergence of new practices or even new urban and territorial utopias Landslides: Evaluation and Stabilization/Glisement de Terrain: Evaluation et Stabilisation, Set of 2 Volumes W. Lacerda, Mauricio Ehrlich, S.A.B. Fontoura, A.S.F. Sayao, 2004-06-15 These volumes comprise the Proceedings of the Ninth International Symposium on Landslides held in Rio de Janeiro Brazil from June 28 to July 2 2004 Information on the latest developments in Landslide Studies is presented by invited lecture reports specialized panel contributions and over two hundred and forty technical papers grouped in the following themes Mapping and geological models in landslide hazard assessment Advances in rock and mine slopes design Field instrumentation and laboratory investigations Pre failure mechanics of landslides in soil and rock Mechanisms of slow active landslides Post failure mechanics of landslides Stabilization methods and risk reduction

measures A wealth of the latest information on all aspects of landslide hazard encompassing geological modelling and soil and rock mechanics landslide processes causes and effects and damage avoidance and limitation strategies Glissement de Terrain : Evaluation Et Stabilisation Willy Alvarenga Lacerda,2004

Geo-information for Disaster Management Peter van Oosterom,Siyka Zlatanova,Elfriede Fendel,2006-02-28 Geo information technology offers an opportunity to support disaster management industrial accidents road collisions complex emergencies earthquakes fires floods and similar catastrophes for example the recent huge disaster with the Tsunami in South East Asia on 26 December 2004 Access to needed information facilitation of the interoperability of emergency services and provision of high quality care to the public are a number of the key requirements Such requirements pose significant challenges for data management discovery translation integration visualization and communication based on the semantics of the heterogeneous geo information sources with differences in many aspects scale resolution dimension 2D or 3D classification and attribute schemes temporal aspects up to date ness history predictions of the future spatial reference system used etc The book provides a broad overview of the geo information technology software systems needed used and to be developed for disaster management The book provokes a wide discussion on systems and requirements for use of geo information under time and stress constraints and unfamiliar situations environments and circumstances

Climate Change Adaptation in Practice Philipp Schmidt-Thome,Johannes Klein,2013-04-17 Climate change adaptation is increasingly recognized as complementary part to climate change mitigation Climate change affects sea level the extent of flood prone areas and precipitation patterns among many others To adapt to these changes the tasks of municipalities and cities are to implement policies and strategies for changes in land use and coastal management as part of their future development It is of vital importance to address the uncertainties of climate change scenarios when proposing adaptation measures that are socially viable and economically reasonable The decision making process promoted here is based on scientific excellence as well on an integrated communication process This book provides a comprehensive overview of key elements required for effective analysis and assessment of climate change impacts economic cost benefit analysis communication processes and creation and transfer of knowledge governance issues and implementation of related policies It describes the results achieved by the BaltCICA www.baltcica.org project whose contributors come from the scientific and public administration communities The regional cooperation has led to the implementation of climate change adaptation in several case studies The BaltCICA project developed concepts methodologies and tools for climate change adaptation that can be translated across other global regions Scientists and students working on the development of climate change and adaptation strategies public administrators in the related fields on local regional and state level including environment water management civil defense as well as professionals working with adaptation technologies including engineering technological solutions urban planning agencies and construction will value this innovative book

Resilience and Urban Risk Management Damien Serre,Bruno

Barroca, Richard Laganier, 2012-10-08 Resilience and Urban Risk Management presents the latest progress made in designing resilient towns and identifies leads to be explored for attaining the objective of systematically integrating risks into urban environments The aim of the book is to provide guidance in designing and planning future cities and to create a new form of risk management

Vernacular Architecture Hassane Kharmich, 2025-02-25 Vernacular architecture refers to regional buildings It utilizes resources from the region in which the buildings are situated This type of architecture reveals a collective heritage embodying the diversity and richness of natural human and socio cultural contexts Vernacular architecture thus is the result of ancestral knowledge in the use of local materials and pure craft techniques The book focuses on four topics 1 Richness and diversity of forms of expression 2 Restoration issues and revitalization challenges 3 Natural risks and resilience and 4 Vernacular architecture as a source of inspiration and a lever for development Keywords Coastal Vernacular Architecture Climatic and Cultural Challenges Intellectual Representations Traditional Earthen Architecture Environment and Restoration Thermal Storage Materials Arid Environments Heritage Preservation Biopolymer Composite Materials Hydrography Tented Living Seismic Hazards Seismic Resilience Bio Sourced Materials Geophysical Characterization Sustainable Territorial Design Solar Collector Thermal Storage Rammed Earth Buildings Resilient Architecture Energy Efficient Buildings Hydraulic Networks

Disaster Prevention Policies Patrick Pigeon, Julien Rebotier, 2016-11-08 This book addresses disaster risk reduction DRR policies focusing on reducing the paradox that exists between the compulsory implementation of DRR policies and continuing limitations The authors use their knowledge of the ever evolving threats associated with disasters and their prevention to investigate this famous paradox and propose solutions that will help readers understand and reconsider its existence The authors also discuss conditionings behind this paradox helping readers understand the existing solutions also suggesting how to reduce the limitations of DRR policies Offers a fresh perspective on the assessments currently available on disaster and DRR policies Provides insight based on examples of DRR policies taken from Latin American Asian and European cases Focuses on reducing the paradox that exists between the compulsory implementation of DRR policies and continuing limitations

DayWater Daniel R. Thevenot, 2008-03-15 The European DayWater project has developed a prototype of an Adaptive Decision Support System ADSS related to urban stormwater pollution source control The DayWater ADSS greatly facilitates decision making for stormwater source control which is currently impeded by the large number of stakeholders involved and by the necessary multidisciplinary knowledge This book presents the results of this project providing new insights into both technical and management issues The main objectives of its technical chapters are pollution source control modelling risk and impact assessment and evaluation and comparison of best management practices It also covers management aspects such as the analysis of the decision making processes in stormwater source control at a European scale and stormwater management strategies in general The combination of scientific technical and socio managerial knowledge with the strong cooperation of numerous end users

reflects the innovative character of this book which includes actual applications of the ADSS prototype in significant case studies DayWater an Adaptive Decision Support System for Urban Stormwater Management contains 26 chapters collectively prepared by DayWater scientific partners and end users associated with this European Research and Development project It includes A general presentation of the DayWater Adaptive Decision Support System ADSS structure and operation modes A detailed description of the major components of this ADSS prototype The assessment of its components in significant case studies in France Germany and Sweden The proceedings of the International Conference on Decision Support Systems for Integrated Urban Water Management held in Paris on 3 4 November 2005 The book presents the ADSS prototype including a combination of freely accessible on line databases guidance documents road maps and modelling or multi criteria analysis tools As demonstrated in several significant case studies the challenge for stormwater managers is to make the benefits of urban stormwater management visible to society resulting in active co operation of a diversity of stakeholders Only then will sustainable management succeed DayWater an Adaptive Decision Support System for Urban Stormwater Management advances this cause of sustainable urban management through Urban stormwater management and makes achievable by means of risk and vulnerability tools which are included the goal of integrated urban water management IUWM

Vulnerability of Coastal Ecosystems and Adaptation André Monaco, Patrick Prouzet, 2014-12-15 The vulnerability of socio ecosystem combines the probability of exposure to natural or anthropogenic pressure sensitivity and resilience This book presents a systemic view of the diversity of pressures and impacts produced by climate change and human actions Erosion of biodiversity by changing ocean chemistry the intensification of global change raises the problem of the adaptation of living resources

Computational Science and its Applications A. H. Siddiqi, R. C. Singh, G. D. Veerappa Gowda, 2020-10-21 Computational science is a rapidly growing multidisciplinary field concerned with the design implementation and use of mathematical models to analyze and solve real world problems It is an area of science that spans many disciplines and which involves the development of models and allows the use of computers to perform simulations or numerical analysis to understand problems that are computational and theoretical Computational Science and its Applications provides an opportunity for readers to develop abilities to pose and solve problems that combine insights from one or more disciplines from the natural sciences with mathematical tools and computational skills This requires a unique combination of applied and theoretical knowledge and skills The topics covered in this edited book are applications of wavelet and fractals modeling by partial differential equations on flat structure as well as on graphs and networks computational linguistics prediction of natural calamities and diseases like epilepsy seizure heart attack stroke biometrics modeling through inverse problems interdisciplinary topics of physics mathematics and medical science and modeling of terrorist attacks and human behavior The focus of this book is not to educate computer specialists but to provide readers with a solid understanding of basic science as well as an integrated knowledge on how to use essential methods from computational science Features Modeling

of complex systems Cognitive computing systems for real world problems Presentation of inverse problems in medical science and their numerical solutions Challenging research problems in many areas of computational science This book could be used as a reference book for researchers working in theoretical research as well as those who are doing modeling and simulation in such disciplines as physics biology geoscience and mathematics and those who have a background in computational science

From System Complexity to Emergent Properties Moulay Aziz-Alaoui, Cyrille Bertelle, 2009-08-07 Emergence and complexity refer to the appearance of higher level properties and behaviours of a system that obviously comes from the collective dynamics of that system's components These properties are not directly deducible from the lower level motion of that system Emergent properties are properties of the whole that are not possessed by any of the individual parts making up that whole Such phenomena exist in various domains and can be described using complexity concepts and thematic knowledges This book highlights complexity modelling through dynamical or behavioral systems The pluridisciplinary purposes developed along the chapters are able to design links between a wide range of fundamental and applicative Sciences Developing such links instead of focusing on specific and narrow researches is characteristic of the Science of Complexity that we try to promote by this contribution

How Information Systems Can Help in Alarm/Alert Detection Florence Sedes, 2018-11-12 Alarm or alert detection remains an issue in various areas from nature i.e. flooding animals or earthquake to software systems Liveness dynamicity reactivity of alarm systems how to ensure the warning information reach the right destination at the right moment and in the right location still being relevant for the recipient in spite of the various and successive filters of confidentiality privacy firewall policies etc Also relevant in this context are to technical contingency issues material failure defect of connection break of channels independence of information routes and sources Alarms with crowd media mis information vs rumours how to make the distinction The prediction of natural disasters floods avalanches etc health surveillance affectionate fevers of cattle pollution by pesticides etc air sea and land transport or space surveillance to prevent Risks of collisions between orbital objects involve more and more actors within Information Systems one of whose purposes is the dissemination of alerts By expanding the capabilities and functionality of such national or international systems social networks are playing a growing role in dissemination and sharing eg with the support of systems like the Google Alert <https://www.google.fr/alerts> which concerns the publication of contents online Recently the Twitter microblogging platform announced a broadcast service designed to help government organizations with alerts to the public The proper functioning of such systems depends on fundamental properties such as resilience liveliness and responsiveness any alert must absolutely reach the right recipient at the right time and in the right place while remaining relevant to him despite the various constraints on the one hand to external events such as hardware failures connection faults breaks in communication channels on the other hand to confidentiality such as the collection and use of personal data with or without the consent of the user or the disparity of access policies generation according to industrial technological

security constraints management of internal external policies etc between actors This book opens the discussion on the procrastination the dynamics and the reactivity of the alert systems but also the problems of confidentiality filtering of information and the means of distinguishing information and rumor Presents alarm or alert detection in all its aspects Finds a solution so that the alert information reaches the right destination Find relevance to various technical issues

Ecosystem and Territorial Resilience Emmanuel Garbolino,Christine Voiron-Canicio,2020-09-15 Ecosystem and Territorial Resilience A Geoprospective Approach provides a full review of the geoprospective approach and how it can be used in planning for and implementing environmental and territorial resilience measures The geoprospective approach is a way to predict and assess for future risks and is a comprehensive method for identifying and addressing potential change impacts In addition to the main concepts and methods of this approach the book presents applications and case studies for different spatio temporal scales and problems related to the degradation of socio ecosystems as well as applying the geoprospective approach to environmental and urban planning The book offers an interdisciplinary perspective tying in concepts and techniques from geography including spatial analysis methods modelling and GIS to address issues of ecological impacts of climate change urban risk and resilience land use changes coastal impacts and sustainable development and potential of adaptability This book is a unique and integral resource for policy makers environmental and territorial managers scientists engineers consultants and graduate students interested in anticipating future change in socio ecosystems Introduces the geoprospective approach to assess the impact of global changes on socio ecosystems and potential risk situations for ecosystems and society Includes geographical techniques such as spatial analysis methods modeling and GIS to address various climate change issues and to detect vulnerabilities vs adaptive capacities of spatial systems Provides case studies as well as interviews with planners and policy makers regarding their views on territorial planning and expectations of the geoprospective

Fractal Geography André Dauphiné,2013-01-09 Our daily universe is rough and infinitely diverse The fractal approach clarifies and orders these disparities It helps us to envisage new explanations of geographical phenomena which are however considered as definitely understood Written for use by geographers and researchers from similar disciplines such as ecologists economists historians and sociologists this book presents the algorithms best adapted to the phenomena encountered and proposes case studies illustrating their applications in concrete situations An appendix is also provided that develops programs written in Mathematica

Spatio-temporal Approaches Hélène Mathian,Lena Sanders,2014-12-03 Spatio temporal Approaches presents a well built set of concepts methods and approaches in order to represent and understand the evolution of social and environmental phenomena within the space It is based on examples in human geography and archeology which will enable us to explore questions regarding various temporalities and tackles social and environmental phenomena Chapter 1 discusses how to apprehend change objects attributes relations processes Chapter 2 introduces multiple points of view about modeling and the authors try to shed a new light on the different but

complementary approaches of geomaticians and thematicians Chapter 3 is devoted to the construction of spatio temporal indicators to various measurements of the change while highlighting the advantage of an approach crossing several points of view in order to understand the phenomenon at hand Chapter 4 presents different categories of simulation model in line with complexity sciences These models rely notably on the concepts of emergence and self organization and allow us to highlight the roles of interaction within change Chapter 5 provides ideas on research concerning the various construction approaches of hybrid objects and model couplings

Floods Freddy Vinet, 2017-09-27 In the past thirty years knowledge on flooding has greatly increased by moving away from purely hydrological and hydraulic science and opening up to other disciplines such as economics or human and geographical sciences It is as part of this multidisciplinary approach that this book proposes a review of current knowledge on flood risk It starts with the ever increasing impact of flooding in order to conceptualize and understand the constituents of risk Although risk knowledge in modeling methods or naturalist approaches remains essential it is further developed by the fields of economics human sciences geography environmental psychology and history This integrated approach to flood risk contextualizes current conclusions on the eventual effects of climate change by showing that human factors are of paramount importance in understanding the process of risk production The book sets a state of art around the flood issue from the description of the phenomena to the management of risk dikes dams reducing vulnerability management of crisis The chapters are written by specialists but are accessible to the mainstream scientist Each chapter exposes knowledge methodologies scientific locks and the prospects of each discipline on the theme of floods

The Land/Ocean Interactions in the Coastal Zone of West and Central Africa Salif Diop, Jean-Paul Barousseau, Cyr Descamps, 2014-06-02 Although the main focus of this book is on the estuaries its scope goes well beyond this particular coastal feature Indeed the estuary can only be considered as part of the life cycle of the entire river and the marine area it feeds into an area particularly subject to human and natural pressures The main estuaries and deltas of West and Central Africa region provide a variety of goods and services to its coastal population The most important of them are related to critical fish habitat wood and charcoal from mangroves as well as space for agriculture aquaculture urban development tourism and transport Particular emphasis has been made in this book on mangroves that play a significant role in terms of flood control groundwater replenishment coastline stabilization and protection against storms They also retain sediments and nutrients purify water and provide critical carbon storage Such hydrological and ecological functions explain the focus on serving mangrove ecosystems and the nearby communities which draw significant income from fishing rice production tourism salt extraction and other activities such as harvesting honey and medicinal plants hence the need for preserving mangrove ecosystems to ensure sustainability of the estuaries and deltas of West and Central Africa region The book has a foreword by Mr Achim Steiner United Nations Under Secretary General and Executive Director of UNEP who is stating that credible and up to date information is essential for the public at large but more specifically for scientists researchers

managers decision makers all working together in order to safeguard protect and sustainably manage estuaries deltas and lagoons and the coastal and ocean waters of Western and Central Africa Resilience Imperative Magali Reghezza-Zitt, Samuel Rufat, 2015-10-06 We have to adapt to the impacts that unfortunately we can no longer avoid said President Obama at the UN Climate Summit in September 2014 Adaptation and resilience are now a must in both academic research and international bodies A fashionable concept resilience s polysemy sparks many debates on its uses and operational relevance This book bridges the increasing divide between academic research and the latest planning innovations offering practical and conceptual insights for practitioners researchers and students Magali Reghezza Zitt and Samuel Rufat present a cross disciplinary state of the art debate and critical analysis of the social spatial practical and political implications of resilience Offers a critical approach of resilience based on a wide range of case studies Provides insights ranging from the most recent theoretical issues to the most practical engineering innovations Links the latest cross disciplinary academic insights with the up to date practical innovations
