Methods in Immunology and Immunochemistry Curtis Williams, 2012-12-02 Methods in Immunology and Immunochemistry Volume I Preparation of Antigens and Antibodies is aimed to bring together detailed procedures in the preparation of antigens and antibodies The text also provides a presentation and discussion of these methods The book covers topics in immunology such as antigens its kinds and the preparation and testing of lipids for immunological study The production of antiserum the preparation of immunogens collecting and handling of serum and immunization procedures are also explained The book also discusses the purification of antibodies methods of labeling antigens and antibodies and the methods used in the studies of the structure of immunoglobulins The text is recommended for immunologists who would like to know the different procedures and methods involved in immunology as well as the principles behind it The book will also serve as a guide for medical staff who prepare products related to immunology Methods in Immunology and Immunochemistry Curtis Alvin Williams, Merrill W. Chase, 1967 **Methods in Immunology and Immunochemistry** Curtis Alvin Williams, Merrill W. Chase, 1967 **Reactions of Antibodies with Soluble Antigens** Curtis A. Williams, Merrill W. Chase, 2014-05-10 Methods in Immunology and Immunochemistry Volume III Reactions of Antibodies with Soluble Antigens provides information pertinent to antigen antibody and hapten antibody reactions in vitro in free solution and in gels This book presents the development of research in immunology and immunochemistry Organized into three chapters this volume begins with an overview of protein antiprotein reactions This text then discusses the inhibitory activity of protein fragments which suggested that antigenic combining sites of proteins were limited regions of the whole antigen molecule Other chapters consider the measurement of inhibitory activity which is still the principal assay to characterize antigenic sites of proteins This book discusses as well the immunological techniques prior to the development of gel diffusion methods The final chapter deals with fluorescence labeling techniques that provide powerful approaches for exploring the thermodynamic and kinetic parameters of antigen antibody interactions This book is a valuable resource for mathematicians and immunologists Physical and Chemical Methods Curtis A. Williams, Merrill W. Chase, 2014-05-12 Methods in Immunology Volume II Physical and Chemical Methods is a collection of papers dealing with electrophoresis analytical ultracentrifugation dialysis ultrafiltration cellulose ion exchangers and chromatographic separation of macromolecules on porous gels Some papers explain the applications of radioisotopes optical analysis and chemical analysis of proteins carbohydrates lipids and nucleic acid One paper describes the theory of electro migration Factors such as electrical charge or frictional coefficients govern the rate of migration of charged particles in an electric field The differences found in their velocities can be used to separate substances or analyze them Mobility is a characteristic property of molecules and can also be influenced by the composition of the medium or solution Dialysis separates solvents too large to diffuse through a barrier from smaller solutes ultrafiltration reverse osmosis forces solvent and solutes up to a certain critical size through the barrier

by a high pressure on one side The book notes that the membrane never becomes plugged in dialysis because of some opposite movement of the solvent Another paper points out that the significance of radioactive tracers in immunochemistry employed to identify and label macromolecules functioning as antigens and antibodies The collection can prove valuable to bio chemists cellular biologists micro biologists developmental biologists and scientists involved in immunological research
