Mitochondria Physiology in Green Organisms Cornelia Spetea, Ildikò Szabò, Hans-Henning Kunz, 2017-03-14 Chloroplasts and mitochondria both have a prokaryotic origin carry essential genes on their own highly reduced genome and generate energy in the form of ATP for the plant cell The ion composition and concentration in these bioenergetic organelles impact photosynthesis respiration and stress responses in plants Early electrophysiological and biochemical studies provided strong evidence for the presence of ion channels and ion transporters in chloroplast and mitochondrial membranes However it wasn't until the last decade that the development of model organisms such as *Arabidopsis thaliana* and *Chlamydomonas reinhardtii* along with improved genetic tools to study cell physiology have led to the discovery of several genes encoding for ion transport proteins in chloroplasts and mitochondria For the first time these discoveries have enabled detailed studies on the essential physiological function of the organellar ion flux This Research Topic welcomed updated overviews and comprehensive investigations on already identified and novel ion transport components involved in physiology of chloroplasts and mitochondria in green organisms

Patch Clamp Technique Fatima Shad Kaneez, 2012-03-23 This book is a stimulating and interesting addition to the collected works on Patch clamp technique Patch Clamping is an electrophysiological technique which measures the electric current generated by a living cell due to the movement of ions through the protein channels present in the cell membrane The technique was developed by two German scientists Erwin Neher and Bert Sakmann who received the Nobel Prize in 1991 in Physiology for this innovative work Patch clamp technique is used for measuring drug effect against a series of diseases and to find out the mechanism of diseases in animals and plants It is also most useful in finding out the structure function activities of compounds and drugs and most leading pharmaceutical companies used this technique for their drugs before bringing them for clinical trial This book deals with the understanding of endogenous mechanisms of cells and their receptors as well as advantages of using this technique It covers the basic principles and preparation types and also deals with the latest developments in the traditional patch clamp technique Some

chapters in this book take the technique to a next level of modulation and novel approach This book will be of good value for students of physiology neuroscience cell biology and biophysics
