Ottone, 2023-11-22 Plastination is currently considered one of the most innovative forms of conservation of complete bodies sections and organs both human and animal for use in undergraduate and postgraduate teaching as well as morphological research In this sense to develop the various plastination techniques specific equipment and specialized training of academics are required who have the ability to carry out the diversity of protocols that exist depending on the anatomical material to be preserved The decomposition of organic matter is a vital process in nature but it is also an impediment to morphological studies and research This is particularly important in biological specimens that shrink considerably when exposed to normal atmospheric conditions For this reason it has always been a constantly pursued objective for anatomists Plastination in this regard is a true alternative in the conservation of perishable biological tissues complete bodies complete organs such as brains livers lungs kidneys hearts muscles joint preparations cuts in sections of complete corpses or from isolated regions etc reaching a dry and imperishable state through the use of different polymers and special plastics ensuring that the organs limbs and entire bodies do not lose their texture and apparently normal disposition This original book describes in detail and in an updated way the plastination techniques for the conservation of human and animal biological material demonstrating the applications in teaching and research of anatomy morphological sciences and health sciences The didactic chapters present the history and the fundamentals of plastination techniques steps equipment supplies material temperature as well as its

clinical surgical and research applications The work also features biosafety issues and provides Ethical Considerations in Plastination Advances in Plastination Techniques is intended for a cross section of academics technicians and advanced students from all areas of Health Sciences including Physicians and Dentists and Veterinary Sciences **Methods and**

Hart, 2008-02-28 Why do students continue to dissect animals in biology classes Why despite the excellence of teaching resources for veterinary and human medical education that substitute for dissection do those provided for pre college students fall short in convenience flexibility and coordination with the curriculum Why Dissection Animal Use in Education looks beyond the typical yes or no debate about dissection to understand how we came to our current practice of dissection in intermediate and high school biology even as preparation of health professionals has moved away from dissection Despite the many forces that support the continued use of dissection in pedagogy teachers retain much autonomy in how they teach in the classroom and legislation in many states provide specific requirements for what should and should not be taught in separated science and health curricula offering students the option to not engage in dissection Why Dissection walks students teachers and parents through these options to help them make more informed choices regarding their science education options Diffusion MRI Derek K Jones, 2010-11-11 Professor Derek Jones a world authority on diffusion MRI has assembled most of the world's leading scientists and clinicians developing and applying diffusion MRI to produce an authorship list that reads like a Who's Who of the field and an essential resource for those working with diffusion MRI Destined to be a modern classic this definitive and richly illustrated work covers all aspects of diffusion MRI from basic theory to clinical application Oxford Clinical Neuroscience is a comprehensive cross searchable collection of resources offering quick and easy access to eleven of Oxford University Press's prestigious neuroscience texts Joining Oxford Medicine Online these resources offer students specialists and clinical researchers the best quality content in an easy to access format Meshfree Methods G.R.
