Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research. Written by experts in their specialist fields, the series creates a unique service for the active research chemist, supplying regular critical in-depth accounts of progress in particular areas of chemistry. For over 80 years, the Royal Society of Chemistry and its predecessor, the Chemical Society, have been publishing reports charting developments in chemistry, which originally took the form of Annual Reports. However, by 1967, the whole spectrum of chemistry could no longer be contained within one volume, and the series Specialist Periodical Reports was born. The Annual Reports themselves still existed but were divided into two, and subsequently three volumes covering Inorganic, Organic, and Physical Chemistry. For more general coverage of the highlights in chemistry, they remain a must. Since that time, the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry. Some titles have remained unchanged, while others have altered their emphasis along with their titles; some have been combined under a new name, whereas others have had to be discontinued. The current list of Specialist Periodical Reports can be seen on the inside flap of this volume.

Hormonal Regulation of Spermatogenesis Frank French,2012-12-06. The conference represented by this book was made possible by support from NICHD and a planning committee headed by Dr Richard Sherins. Two general areas of research are included: the first encompasses steroid hormone synthesis, metabolism, and transport in the testis, and the second relates to hormonal regulation of the seminiferous tubule, with special emphasis on the control of Sertoli cell function. In addition, there are sections on the purification of unique testicular proteins and morphological studies with particular emphasis on the Sertoli cell. We would like to express our sincere thanks to Dr Sherins and his staff at NICHD and to all of the people at the University of North Carolina who participated in the Conference arrangements: to Dr Judson J. Van Wyk, Chief of the Pediatric Endocrinology Division, and Dr H. Stanley Bennett, Director of the Laboratories for Reproductive Biology. Our very special thanks to Mrs Carolyn Jaros for her help in handling the local arrangements, Mrs Martha Byrd, and Mrs Linda Rollins, who typed the manuscripts. Miss Leslie Wells and Mr Albert Smith kindly assisted in proof-reading, and Dr Elizabeth Wilson gave much help with the final editing process. To all of these people, we are most grateful. *Cumulative Subject Index [to Methods in Enzymology] Volumes 1-30* Martha G. Dennis, Edward A. Technology, Volume 20 Kirk-Othmer,2006-04-07. The fifth edition of the Kirk-Othmer Encyclopedia of Chemical Technology builds upon the solid foundation of the previous editions, which have proven to be a mainstay for chemists, biochemists, and engineers at academic, industrial, and government institutions since publication of the first edition in 1949. The new edition includes necessary adjustments and modernisation of the content to reflect changes and developments in chemical

technology Presenting a wide scope of articles on chemical substances properties manufacturing and uses on industrial processes unit operations in chemical engineering and on fundamentals and scientific subjects related to the field The Encyclopedia describes established technology along with cutting edge topics of interest in the wide field of chemical technology whilst uniquely providing the necessary perspective and insight into pertinent aspects rather than merely presenting information Set began publication in January 2004 Over 1 000 articles More than 600 new or updated articles 27 volumes

Immobilization of Enzymes and Cells José M. Guisán, 2008-02-05 Enzymes and whole cells are able to catalyze the most complex chemical processes under the most benign experimental and environmental conditions In this way enzymes and cells could be excellent catalysts for a much more sustainable chemical industry However enzymes and cells also have some limitations for nonbiological applications fine chemistry food chemistry analysis therapeutics and so on Enzymes and cells may be unstable difficult to handle under nonconventional conditions poorly selective toward synthetic substrates and so forth From this point of view the transformation from the laboratory to industry of chemical processes catalyzed by enzymes and cells may be one of the most complex and exciting goals in biotechnology For many industrial applications enzymes and cells have to be immobilized via very simple and cost effective protocols in order to be re used over very long periods of time From this point of view immobilization simplicity and stabilization have to be strongly related concepts Over the last 30 years a number of protocols for the immobilization of cells and enzymes have been reported in scientific literature However only very few protocols are simple and useful enough to greatly improve the functional properties of enzymes and cells activity stability selectivity and related properties

Crystallization of Nucleic Acids and Proteins Arnaud Ducruix, Richard Giegé, 1999 Crystallography is the major method of determining structures of biological macromolecules yet crystallization techniques are still regarded as difficult to perform This new edition of Crystallization of Nucleic Acids and Proteins A Practical Approach continues in the vein of the first edition by providing a detailed and rational guide to producing crystals of proteins and nucleic acids of sufficient quantity and quality for diffraction studies It has been thoroughly updated to include all the major new techniques such as the uses of molecular biology in structural biology maximizing expression systems sequence modifications to enable crystallization and the introduction of anomalous scatterers diagnostic analysis of prenucleation and nucleation by spectroscopic methods and the two dimensional electron crystallography of soluble proteins on planar lipid films As well as an introduction to crystallogenesis the other topics covered are Handling macromolecular solutions experimental design seeding proceeding from solutions to crystals Crystallization in gels Crystallization of nucleic acid complexes and membrane proteins Soaking techniques Preliminary characterization of crystals in order to tell whether they are suitable for diffraction studies As with all Practical Approach books the protocols have been written by experienced researchers and are tried and tested methods The underlying theory is brought together with the laboratory protocols to provide researchers with the conceptual and methodological tools

necessary to exploit these powerful techniques Crystallization of Nucleic Acids and Proteins A Practical Approach 2e will be an invaluable manual of practical crystallization methods to researchers in molecular biology crystallography protein engineering and biological chemistry **Analysis of Biogenic Amines and Their Related Enzymes** David Glick, 2009-09-25 Biochemical analysis is a rapidly expanding field and is a key component of modern drug discovery and research Methods of Biochemical Analysis provides a periodic and authoritative review of the latest achievements in biochemical analysis Founded in 1954 by Professor David Glick Methods of Biochemical Analysis provides a timely review of the latest developments in the field **Branched-Chain Amino Acids, Part B**, 2000-09-06 Volume 324 of Methods in Enzymology supplements Volume 166 It includes genetic information cloning gene expression and information on human genetic diseases not available when Volume 166 was published General Description of the Series The critically acclaimed laboratory standard for more than forty years Methods in Enzymology is one of the most highly respected publications in the field of biochemistry Since 1955 each volume has been eagerly awaited frequently consulted and praised by researchers and reviewers alike Now with more than 300 volumes all of them still in print the series contains much material still relevant today truly an essential publication for researchers in all fields of life sciences Preparation of substrates and assay of enzymes Cloning expression and purification of enzymes Detection and consequences of genetic defects Regulation and expression of enzymes **Ecto-ATPases** Liselotte Plesner, Terence L. Korn,2013-11-21 The contributions of electron microscopy to membrane biology have been indispensable and at the same time disappointing Membranes were known to exist before the advent of electron microscopy and general principles of their composition and molecular organization had been deduced from permeability and electrical conductivity measurements polarized light microscopy and X ray diffraction

On the other hand the complexities of the many intracellular membranes and membranous organelles were really not suspected until they were observed by the electron microscopist. One then had further hopes that the high resolution of the electron microscope theoretically it can resolve atomic distances would allow the visualization of the molecular architecture of membranes and lead directly to an understanding of structure and function at the molecular level. This expectation has been largely unrealized. Because of the great difficulties encountered in the preparation of biological material because of the uncertainty of the chemistry of staining and because of numerous electron optical artifacts it has been a major challenge just to rationalize the observed images in terms of the known facts let alone to utilize the images to expand our knowledge of the molecular structure of biological membranes. The many differences among membranes with respect to function and composition are lost in the universal trilamellar image. Perhaps the one major exception to this and the major structural contribution of electron microscopy at the molecular level has come from freeze etch electron microscopy.

Affinity Chromatography O. Hoffmann-Ostenhof, M. Breitenbach, F. Koller, 2016-01-22 *Affinity Chromatography* is a collection of papers that presents the advancement in various areas of affinity chromatography. The title particularly covers the development in affinity chromatography in the context of biochemistry and immunochemistry. The text first details gel matrices coupling methods and charge transfer chromatography. Next the selection tackles the affinity chromatography of enzymes and hydrophobic interaction chromatography. The text also discusses matrix bound antigens and antibodies along with matrix bound lectins and affinity chromatography of cells. Part VI deals with affinity chromatography of hormone receptors while part VII talks about affinity techniques in the isolation of DNA, RNA and polysomes. The book will be of great use to students, researchers and practitioners of biochemistry.
