Fatty Acid Metabolism and its Regulation, 1984-01-01 **Fatty Acid Metabolism and its Regulation** **Natural Products Isolation** G.H. Wagman, R. Cooper, 1988-12-01 This new book encompasses in great detail the most recent progress made in the isolation and separation of natural products. It covers antibiotics, marine and plant derived substances, enzyme inhibitors and interferons. The most recent separation methodology is described. Although there is a bias toward antibiotics, it was done because this is still the largest natural products area of research. The fourteen chapters are written by experts in their respective fields. The first two chapters are largely devoted to new methodology applied to purification of a variety of compounds. They include an extensive review and new applications of counter current chromatography and the newly emerging HPLC photodiode array technology. Chapter 3 provides a review of affinity chromatography applied to the separation of antibiotics for the first time. Next are chapters on antimicrobials with an update on all the most recent lactam after 1976 discoveries. A comprehensive review of a very important class of antiparasitic agents, the avermectins, follows. An update of isolation and purification of a variety of marine derived compounds is next. The succeeding chapter is a comprehensive review of the most recent developments in isolation and purification of interferons. This is followed by a discussion of enzyme inhibitors and their isolation and purification and ties in with a chapter on plant derived natural products, some of which are also in this same category. The final chapter is a futuristic essay indicating the isolation of minute amounts of natural products and the fascinating biological properties which they possess. The book has extensive isolation schemes, tables, figures and chemical structures. In many instances, a short summary of the producing organism, brief chemical description and structure and biological activity of the compounds is presented. Detailed information of extraction, separation and purification techniques follow. Each chapter has an extensive bibliography and where applicable, an appendix showing sources of materials and equipment. A detailed index to the subject matter is included at the end of the book. The book thus offers the reader up to date reviews including 1988 of specific topics in the natural products field not to be found elsewhere. Information on new chromatographic methods and techniques described in sufficient detail to be utilized by investigators in this area of research and extensive references to enable the serious researcher to pursue particular information. It will appeal to pharmaceutical and natural products researchers and is a valuable acquisition for university chemistry and biochemistry departments.

Humoral Factors in Host Defense Yuichi Yamamura, 2012-12-02 **Humoral Factors in Host Defense** contains the proceedings of the First Takeda Science Foundation Symposium on Bioscience held on October 28-30, 1982 in Kyoto, Japan. The symposium focused on the humoral factors regulating immune responses with emphasis on T cell derived immunoregulatory molecules, molecular mechanisms of interferons, factors involved in differentiation and activation of immunocytes and the use of the molecular genetics approach to host defense factors. Organized into four parts encompassing 22 chapters, this volume begins with an overview of interleukin 2 and T cell replacing factors along with their immunological

functions and biochemical features It then discusses antigen specific T cell factors immunoregulatory molecules from human monoclonal T cells physiological and pathological roles of lymphokines regulation of the immune system by monoclonal T cell peptides production of a glycosylated human protein by recombinant DNA technology and molecular genetics of immunoglobulin genes and the major histocompatibility antigen Geneticists and biologists will find this book extremely useful

Tissue Culture of Epithelial Cells Mary Taub, 2013-06-29 Epithelial cells are present in many different tissues in the body and possess a diverse number of functional properties However all epithelial cells share some common characteristics The cells possess a morphological polarity an apical and basolateral surface and are interconnected by tight junctions The epithelial cells also possess the capacity to transport select solutes across the monolayer Transport systems localized on either the apical or basolateral surface are responsible for this vectorial transport Such characteristics of epithelial cells can be examined in the tissue culture situation This volume discusses the use of cell culture techniques to study these fundamental properties of epithelial cells Major questions concerning epithelia which may be examined in culture are addressed The approaches which are taken to answer these questions are described in detail with regards to kidney cell cultures Similar investigations may be done with epithelial cell cultures derived from other tissues following the kidney cell culture paradigm

Voller, A. Bartlett, D. Bidwell, 2012-12-06 Analyses for naturally occurring biological substances or administered materials have been with us for many years These were usually based on the physical or chemical characteristics of the substances to be measured However in recent years there has been an explosion of interest in analytical methods which made use of the high specificity and sensitivity of immunological reactions These methods can be very simple in terms of technical procedures and can usually be performed on minute samples of biological fluids factors which have ensured their ready acceptance in most laboratories Recently there have been numerous meetings on technical aspects of particular immunoassays and on their application in specific diseases We felt however that the time was ripe for an overview of the whole field To this end a conference on Immunoassays for the 80s was held at the Zoological Society of London in 1980 and this book is largely based on that meeting Both the immunoassay techniques and their numerous applications were discussed and are dealt with at length in this volume The editors wish to thank all the contributors for their chapters and to acknowledge the debt they owe to Jean Ryan NLCM without whose organization and assistance this volume would not have been completed A V D B A B
