

The background of the cover is a deep blue. In the upper left, there are two overlapping rectangular planes, one with a yellow-to-orange gradient and the other with a blue-to-purple gradient. In the center, a complex, three-dimensional structure is formed by several yellow and orange planes, resembling a stylized flower or a geometric sculpture. A thin, light-colored rod or wire passes through the structure, extending from the bottom towards the center. The overall composition is abstract and geometric, suggesting mathematical concepts.

Methods in Applied Mathematics J. Kevorkian, J.D. Cole, 2013-03-09 This book is a revised and updated version including a substantial portion of new material of J D Cole s text Perturbation Methods in Applied Mathematics Ginn Blaisdell 1968 We present the material at a level which assumes some familiarity with the basics of ordinary and partial differential equations Some of the more advanced ideas are reviewed as needed therefore this book can serve as a text in either an advanced undergraduate course or a graduate level course on the subject The applied mathematician attempting to understand or solve a physical problem very often uses a perturbation procedure In doing this he usually draws on a backlog of experience gained from the solution of similar examples rather than on some general theory of perturbations The aim of this book is to survey these perturbation methods especially in connection with differential equations in order to illustrate certain general features common to many examples The basic ideas however are also applicable to integral equations integrodifferential equations and even to difference equations In essence a perturbation procedure consists of constructing the solution for a problem involving a small parameter  $B$  either in the differential equation or the boundary conditions or both when the solution for the limiting case  $B = 0$  is known The main mathematical tool used is asymptotic expansion with respect to a suitable asymptotic sequence of functions of  $B$
