Medication Madness Peter R. Breggin, 2009-05-26. Medications for everything from depression and anxiety to ADHD and insomnia are being prescribed in alarming numbers across the country, but the cure is often worse than the original problem. Medication Madness is a fascinating, frightening, and dramatic look at the role that psychiatric medications have played in fifty cases of suicide, murder, and other violent criminal and bizarre behaviors. As a psychiatrist who believes in holding people responsible for their conduct, the weight of scientific evidence and years of clinical experience eventually convinced Dr. Breggin that psychiatric drugs frequently cause individuals to lose their judgment and their ability to control their emotions and actions. Medication Madness raises and examines the issues surrounding personal responsibility when behavior seems driven by drug-induced adverse reactions and intoxication. Dr. Breggin personally evaluated the cases in the book in his role as a treating psychiatrist, consultant, or medical expert. He interviewed survivors and witnesses and reviewed extensive medical, occupational, educational, and police records. The great majority of individuals lived exemplary lives and committed no criminal or bizarre actions prior to taking the psychiatric medications. Medication Madness reads like a medical thriller, true crime story, and courtroom drama, but it is firmly based in the latest scientific research and dozens of case studies. The lives of the children and adults in these stories, as well as the lives of their families and their victims, were thrown into turmoil and sometimes destroyed by the unanticipated effects of psychiatric drugs. In some cases, our entire society was transformed by the tragic outcomes. Many categories of psychiatric drugs can cause potentially horrendous reactions: Prozac, Paxil, Zoloft, Adderall, Ritalin, Concerta, Xanax, lithium, Zyprexa, and other psychiatric medications may spellbind patients into believing they are improved when, too often, they are becoming worse. Psychiatric drugs drive some people into psychosis, mania, depression, suicide, agitation, compulsive violence, and loss of self-control without the individuals realizing that their medications have deformed their way of thinking and feeling. This book documents how the FDA, the medical establishment, and the pharmaceutical industry have oversold the value of psychiatric

drugs It serves as a cautionary tale about our reliance on potentially dangerous psychoactive chemicals to relieve our emotional problems and provides a positive approach to taking personal charge of our lives Meyler's Side Effects of Drugs Leopold Meyler, Maurice Nelson Graham Dukes, 1980 Medication Madness Peter Roger Breggin, 2009-05-26 Dr Breggin presents this fascinating frightening and dramatic look at people driven to suicide murder and other violent behaviors by the psychotropic medications that were meant to help them *Pharmacokinetics and Adverse Effects of Drugs* Ntambwe Malangu, 2018-05-23 This book is a fruit of a collaborative work from several international scientists It will be a useful resource for researchers students and clinicians Each individual chapter could serve as a prescribed reading for postgraduate students and clinicians specializing in and practicing clinical pharmacology and toxicology pharmacotherapy and pharmacotherapeutics pharmacovigilance and toxicovigilance as well as those involved in clinical research drug discovery and development Every chapter in this book discusses and provides illustrations on the theme discussed based on authors understanding and experience while summarizing existing knowledge In doing so each chapter provides a new insight that would benefit a novice as well as a seasoned reader in understanding the pharmacokinetic mechanisms and risk factors involved in the occurrence of adverse effects of drugs
