Proceedings of the 1st mini symposium of the Roman Number Theory Association Marina Monsurrò, Francesco Pappalardi, Valerio Talamanca, 2016-05-02 This volume contains the proceeding of the first miny symposium of the Roman Number Theory Association The conference was held on May 7 2015 at the Universit Europea di Roma and it represented the first initiative of the association As organizers of the symposium and promoters of the constituent association we thank the speakers for the high scientific contribution offered and the scribas who wrote these notes We also thank the Universit Europea di Roma and the Universit Roma Tre for funding the event This first conference whose proceedings are collected here is evidence of our goal to be a key player in the development of a strong Roman community of number theorists and by this we do not only intend to foster a specific scientific program but also and more importantly to create a framework of opportunities for scientific cooperation for those interested in number theory Among these opportunities we can enlist the Scriba project as well as international cooperation with developing countries and the support of young researcher in number theory with special regards to those coming from developing country The association even tough founded and based in Rome has an international spirit and we strongly believe in international cooperation In an effort to make the Roman Number Theory Association work efficiently and achieve its multiple goals we chose to turn it into an NGO The proceedings of a conference usually collect the most significant contributions presented during the conference itself The manuscripts were approved by the speakers and lastly reviewed by the editors of the present volume

The Development of the Number Field Sieve Arjen K.

Lenstra, Hendrik W. Jr. Lenstra, 2006-11-15 The number field sieve is an algorithm for finding the prime factors of large integers It depends on algebraic number theory Proposed by John Pollard in 1988 the method was used in 1990 to factor the ninth Fermat number a 155 digit integer The algorithm is most suited to numbers of a special form but there is a promising variant that applies in general This volume contains six research papers that describe the operation of the number field sieve from both theoretical and practical perspectives Pollard's original manuscript is included In addition there is an annotated bibliography of directly related literature
