

Nursing care plan

What is a nursing care plan?

is a formal process that includes correctly identifying existing needs, as well as recognizing potential needs or risks.

Objectives:

- Promote evidence-based nursing care and to render pleasant and familiar conditions in hospitals or health centers.
- Support holistic care which involves the whole person including physical, psychological, social and spiritual in relation to management and prevention of the disease.
- Establish programs such as care pathways and care bundles. Care pathways involve a team effort in order to come to a consensus with regards to standards of care and expected outcomes while care bundles are related to best practice with regards to care given for a specific disease.
- Identify and distinguish goals and expected outcome.
- Review communication and documentation of the care plan.
- Measure nursing care.

Types of Nursing Care Plans?

- 1- **Informal nursing care plan:** is a strategy of action that exists in the nurse's mind.
- 2- **A formal nursing care plan:** is a written or computerized guide that organizes information about the client's care.
 - Standardized care plans specify the nursing care for groups of clients with everyday needs.
 - Individualized care plans are tailored to meet the unique needs of a specific client or needs that are not addressed by the standardized care plan.

Components:

A nursing care plan (NCP) usually includes **nursing diagnoses**, client problems, expected outcomes, and nursing interventions and rationales. These components are elaborated below:

- 1- **Client health assessment:** medical results, and diagnostic reports. This is the first measure in order to be able to design a care plan. In particular, client assessment is related to the following areas and abilities: physical, emotional, sexual, psychosocial, cultural, spiritual/transpersonal, cognitive, functional, age-related, economic and environmental. Information in this area can be subjective and objective.
- 2- **Expected client outcomes:** are outlined. These may be long and short term.
- 3- **Nursing interventions:**
- 4- **Rationales:** for interventions in order to be evidence-based care.
- 5- **Evaluation:** This documents the outcome of nursing interventions.

Basic Principles of Nursing Care Virginia Henderson, 1997 The International Council of Nurses commissioned her to write an essay entitled Basic Principles of Nursing Care Geneva 1960 for the use of nurses who had neither access to technology nor the medical care required to establish disease diagnoses The ICN publication is available in 29 languages and is in current use throughout the world Noting the absence of an organized literature upon which to base clinical studies she embarked on a project to annotate nursing literature The four volume Nursing Studies Index was completed in 1972 and was hailed as her most important contribution to nursing science Miss Henderson started her most important writing project at the age of 75 when she began the sixth edition of the Principles and Practice of Nursing text Over the next five years she led Gladys Nite and seventeen contributors to synthesize the professional literature she had just completed indexing With the wisdom gleaned from over fifty years in the nursing profession and the opportunity to review the writings of all principle authors who wrote in English she fashioned a work that both thoroughly criticized health care and offered nurses an opportunity to correct the shortcomings The book operates on two levels individual and global She argued that health care will be reformed by the individual nurses who will enable their patients to be independent in health care matters when patients are both educated and encouraged to care for themselves She took this philosophy to new heights by eliminating medical jargon from the text and declaring it is a reference for those who want to guard their own or their family s health or take care of a sick relative or friend AAHN Leadership and Nursing Care Management - E-Book M.
