Structured Biological Modelling Michael Kraus,Bernhard Wolf,2024-11-01 Structured Biological Modelling presents a

straightforward introduction for computer aided analysis mathematical modelling and simulation of cell biological systems This unique guide brings together the physiological structural molecular biological and theoretical aspects of the signal transduction network that regulates growth and proliferation in normal and tumor cells It provides comprehensive survey of functional and theoretical features of intracellular signal processing and introduces the concept of cellular self organization Exemplified by oscillatory calcium waves strategies for the design of computer experiments are presented that can assist or even substitute for time consuming biological experiments The presented minimal model for proliferation associated signal transduction clearly shows the alterations of the cellular signal network involved in neoplastic growth This book will be useful to cell and molecular biologists oncologists physiologists theoretical biologists computer scientists and all other researchers and students studying functional aspects of cellular signaling

Crafting Science Joan H. Fujimura, 1996 During the late 1970s and 1980s cancer underwent a remarkable transformation In one short decade what had long been a set of heterogeneous diseases marked by uncontrolled cell growth became a disease of our genes How this happened and what it means is the story Joan Fujimura tells in a rare inside look at the way science works and knowledge is created A dramatic study of a new species of scientific revolution this book combines a detailed ethnography of scientific thought an in depth account of science practiced and produced a history of one branch of science as it entered the limelight and a view of the impact of new genetic technologies on science and society The scientific enterprise that Fujimura unfolds for us is proto oncogene cancer research the study of those segments of DNA now thought to make normal cells cancerous Within this framework she describes the processes of knowledge construction as a social enterprise an endless series of negotiations in which theories material technologies and practices are co constructed incorporated and refashioned Along the way Fujimura addresses long standing questions in the history and philosophy of science culture theory and sociology of science How do scientists create good problems experiments and solutions What are the cultural institutional and material technologies that have to be in place for new truths and new practices to succeed Portraying the development of knowledge as a multidimensional process conducted through multiple cultures institutions actors objects and practices this book disrupts divisions among sociology history anthropology and the philosophy of science technology and medicine
