K. Kirk Shung, Michael Smith, Benjamin M.W. Tsui, 2012-12-02 Since the early 1960 s the field of medical imaging has experienced explosive growth due to the development of three new imaging modalities radionuclide imaging ultrasound and magnetic resonance imaging Along with X ray they are among the most important clinical diagnostic tools in medicine today Additionally the digital revolution has played a major role in this growth with advances in computer and digital technology and in electronics making fast data acquisition and mass data storage possible This text provides an introduction to the physics and instrumentation of the four most often used medical imaging techniques Each chapter includes a discussion of recent technological developments and the biological effects of the imaging modality End of chapter problem sets lists of relevant references and suggested further reading are presented for each technique X ray imaging including CT and digital radiography Radionuclide imaging including SPECT and PET Ultrasound imaging Magnetic resonance imaging *Physics and Engineering of Medical Imaging* R. Guzzardi, 2012-12-06 The NATO Advanced Study Institute ASI on Physics and Engineering of Medical Imaging has addressed a subject which in the wide area of biomedical technology is one of those which are showing greater impact in the practice of medicine for the ability to picture both Anatomy and Physiology The information and accuracy obtained by whatever imaging methodology is a complex result of a multidisciplinary effort of several sciences such as Physics Engineering Electronics Chemistry Medicine etc Development has occurred through work performed in different environments such as basic and applied research laboratories industries and clinical centers with the aim of achieving an efficient transfer of know how and technology for the improvement of both investigation possibilities and health care On one hand such an effort requires an ever increasing commitment of human and financial resources at

research and industrial level and on the other it meets serious difficulties in recruiting the necessary human expertise oriented to this technology which breaks with the traditional academic borders of the single disciplines Furthermore the scientific community is continually dealing with the problem of increasing the performance and at the same time complexity and costs of instruments applying more and more sophisticated technology in an effort to meet the demand for more complete and accurate clinical information The scientific program of this ASI and the qualification of the authors reveals the intrinsic complexity of the development process of the Imaging methodologies
