Epilepsy and the Corpus Callosum Alexander G. Reeves, 2013-11-11 In July 1982 the first Dartmouth workshop on the corpus callosum took place A nucleus of basic and clinical scientists was convened to give progress reports of their work on the corpus callosum This text was subsequently compiled by the various participants from these reports modified by

a stimulating cross fertilization of ideas and subsequent studies Four and one half decades have intervened since Van Wagenen first sectioned the corpus callosum for epilepsy Van Wagenen and Herren 1940 and Erickson 1940 demonstrated that the corpus callosum is the major route for generalization of experimentally induced focal cortical epilepsy During the succeeding 45 years a handful of clinicians has pursued these leads to confirm the therapeutic value of callosotomy for some types of medically intractable generalized epilepsy Parallel experimental studies with a number of epilepsy models have indicated that the corpus callosum is indeed the major route for seizure generalization that the brainstem is a secondary and more resistant pathway for seizure generalization and that most if not all epileptic seizures originate from the cerebral cortex The unexpected clinical finding that even partial focal seizure incidence is modified by callosotomy now has been demonstrated in the laboratory The various contributors to the clinical and experimental epilepsy sections of this volume have been seminal in these elucidations as will be evident from their chapters The section on the development anatomy and physiology of the corpus callosum demonstrates that these basic areas of study have not been neglected Handbook of Clinical and Experimental Neuropsychology G. Denes, Luigi Pizzamiglio, 1999 This volume is the translated and updated version of the second edition of *Manuale di Neuropsicologia* Zanichelli 1996 by the same authors and it reflects the current status of the art *Methods in Clinical Phonetics* Martin J. Ball, Orla Lowry, 2008-04-15 This book is written for the beginning student of communication disorders with a basic understanding of phonetics or the practising speech language therapist whose phonetic training may need updating It introduces the reader to the main areas of phonetics and the main methods through which the phonetician reduces speech data to a permanent record The book then illustrates the three main approaches to the investigation of spoken language articulatory acoustic and auditory Further it describes how impressionistic phonetic transcription through symbolisation differs from instrumental phonetic techniques For each of these areas of discussion chapters are provided that examine the general phonetic aspects followed by chapters that illustrate their application to clinical data The authors are both phoneticians with experience of investigating both normal and disordered speech through both impressionistic and instrumental means and this is the first book in this market that describes a whole range of data reduction techniques and illustrates them with data relevant to the student and practitioner of communication disorders **Communication Skills for the Health Care Professional: Concepts, Practice, and Evidence** Gwen Van Servellen, 2009-10-07 The first text of its kind to address the connection between communication practices and quality patient care outcomes provides future and practicing patient caregivers basic communication knowledge and skills

Chechile, 2024-09-17 An accessible synthesis of memory research that discusses the creation of memory representations the processes of storage and retrieval and the effectiveness of encoding information The field of memory research is subdivided into many separate and non overlapping topic areas that often employ specialized tools and models This book offers an accessible synthesis of memory research that explores how memory works how it is organized and how it changes dynamically Written by an expert in the field it can be used by undergraduate and graduate students of psychology and as a reference by researchers who want to fill in gaps in their knowledge The book focuses on three general topics that cover a vast amount of research in the field how a memory representation is created how the cognitive processes of storage and retrieval can be studied and measured and the process of encoding information and its varying degrees of effectiveness Specific subjects addressed include habituation and sensitization and the neurobiological changes that underlie them evidence for a cognitive component underlying Pavlovian conditioning biological constraints on a cognitive model of memory an information processing framework for memory misconceptions about memory including the static memory myth and the permanent memory myth model based measurement of storage and retrieval processes a critique of the concept of memory strength the distinction between implicit and explicit memory and learning and repetition Although the writing is accessible to the nonspecialist the density of information is high The text avoids jargon and a glossary defines key terms The notes expand on technical details and point to interesting related ideas Transformatnl Theory

Aesthetics Michael Stephan, Trevor Pateman, 2021-12-24 First Published in 1990 How we perceive and respond to the visual image has been a traditional concern of psychologists philosophers and art historians Today where the visual image increasingly permeates our everyday life and consciousness the question becomes ever more relevant How do we for instance instinctively know what it is that a picture represents without having to be taught How is it that we experience aesthetic pleasure in looking at certain pictures How is it that we often want to talk about the pictures we look at Such questions are currently asked by a wide range of disciplines including semiotics psychoanalysis anthropology neuropsychology and in general contemporary critical analysis of the visual arts In A Transformational Theory of Aesthetics Michael Stephan breaks new ground by linking the findings of these areas Drawing on their common area of knowledge he has developed a radically new theory of picture perception and aesthetic response arguing that images can generate in us a complex pattern of mental changes or transformations This is because the left and right hemispheres of the brain do not always work in harmony hence the wide ranging nature of aesthetic response to distinct art forms A Transformational Theory of Aesthetics is essential reading to those seriously involved in linking the arts and cognitive sciences Human Motivation

Nathan Brody, 2013-10-22 Human Motivation Commentary on Goal Directed Action deals with human motivation illustrating a simplistic model of a goal directed action sequence derived from the usual layman s conception of a goal directed action

This book consists of five chapters After an introduction provided in Chapter 1 Chapter 2 considers the Hullian tradition in motivation emphasizing that there is a body of evidence that requires an analysis of motivational phenomena in nonpurposive terms The theories growing out of research on achievement motivation is examined in Chapter 3 Chapter 4 covers the theory of affective dynamics and applications of certain economic principles to human behavior including theoretical developments to the theory of action presented in the preceding chapter Chapter five discusses complexities in the commonsense view of action tendencies such as the usual assumption that individuals are aware of the reasons for their actions and goals toward which their actions are directed is challenged This publication is a good reference for students and researchers conducting work on the study of human motivation
