## **Rinderpest And Peste Des Petits Ruminants Virus Plagues Of Large And Small Ruminants:**

*Rinderpest and Peste des Petits Ruminants* William P. Taylor, 2005-11-15 Rinderpest and Peste des Petits Ruminants tells the story of how by the year 2010 scientists are set to globally eradicate one of the great historic plagues that has ravaged human livestock for centuries. Descriptions of the disease in Europe date back to the 4th century and it was regularly re-introduced following wars and other civil unrest until late in the 19th century. It was introduced with devastating effect into Africa towards the end of the 19th century and is now widespread across sub-Saharan Africa, the Middle East and Southern Asia. Its causative agent, rinderpest virus, a morbillivirus very closely related to human measles virus, decimates the cattle population along with those of other susceptible domestic ruminants and many wildlife species wherever it is present. The history of Rinderpest, including the history of vaccines and vaccination, details other morbillaviruses, epidemiology and transmission of Rinderpest.

**Wild Rangelands** Johan T. du Toit, Richard Kock, James Deutsch, 2010-01-26 Rangeland ecosystems which include unimproved grasslands, shrublands, savannas and semi-deserts support half of the world's livestock while also providing habitats for some of the most charismatic of wildlife species. This book examines the pressures on rangeland ecosystems worldwide from human land use, over-hunting and subsistence, and commercial farming of livestock and crops. Leading experts have pooled their experiences from all continents to cover the ecological, sociological, political, veterinary and economic aspects of rangeland management today. This book provides practitioners and students of rangeland management and wildland conservation with a diversity of perspectives on a central question: can rangelands be wildlands? The first book to examine rangelands from a conservation perspective, it emphasizes the balance between the needs of people and livestock and wildlife. Written by an international team of experts covering all geographical regions, it examines ecological, sociological, political, veterinary and economic aspects of rangeland management and wildland conservation, providing a diversity of perspectives not seen before in a single volume.

**Peste des Petits Ruminants Virus** Muhammad Munir, 2014-12-02 This book offers a timely and comprehensive review of essential research on Peste des Petits Ruminants Virus (PPRV), ranging from its historical distribution, molecular epidemiology, genome structure, viral proteins, immunity, viral pathogenesis, clinical and molecular diagnosis to advances in vaccine developments and future challenges. PPRV, a Rinderpest-like virus, is the causative agent of one of the most rapidly emerging viral diseases among domestic small ruminants, and the host spectrum has now been expanded to wild small ruminants and camels. With the global eradication of the first livestock disease, Rinderpest, attention is now turning to repeating the procedure for PPR. Each of the book's 13 chapters is dedicated to a specific topic, providing up-to-date literature and discussions by renowned scientists who have made seminal contributions in their respective fields of expertise. Special emphasis has been placed on the analysis of different global efforts to eradicate PPR. This book offers a valuable reference source for virologists, field veterinarians, infection and molecular biologists, immunologists, scientists in related fields and veterinary school libraries.
