Ring Close To Regular:

   Rings Close to Regular A.A. Tuganbaev,2013-03-09 Preface All rings are assumed to be associative and except for nilrings and some stipulated cases to have nonzero identity elements A ring A is said to be regular if for every element a E A there exists an element b E A with a aba Regular rings are well studied For example 163 and 350 are devoted to regular rings A ring A is said to be tr regular if for every element a E A there is an element n b E A such that an anba for some positive integer n A ring A is said to be strongly tr regular if for every a E A there is a positive integer n with n 1 n an E a An Aa 1 It is proved in 128 that A is a strongly tr regular ring if and only if for every element a E A there is a positive integer m with m 1 am E a A Every strongly tr regular ring is tr regular 38 If F is a division ring and M is a right vector F space with infinite basis ei l then End MF is a regular and tr regular ring that is not strongly tr regular The factor ring of the ring of integers with respect to the ideal generated by the integer 4 is a strongly tr regular ring that is not regular   Recent Progress in Ring and Factorization Theory Matej Brešar,Alfred Geroldinger,Bruce Olberding,Daniel Smertnig,2025-06-11 This proceedings volume gathers a selection of cutting edge research in both commutative and non commutative ring theory and factorization theory The papers were presented at the Conference on Rings and Factorization held at the University of Graz Austria July 10 14 2023 The volume covers a wide range of topics including multiplicative ideal theory Dedekind Pr fer Krull and Mori rings non commutative rings and algebras rings of integer valued polynomials topological aspects in ring theory factorization theory in rings and semigroups and direct sum decomposition of modules The conference also featured two special sessions dedicated to Matej Bre ar and Sophie Frisch on the occasion of their 60th birthdays This volume is aimed at graduate students and researchers in these areas as well as related fields and provides new insights into both classical and contemporary research in ring and factorization theory   **Near-rings: The Theory and its Applications** ,2011-10-10 Near rings The Theory and its Applications   **Arithmetical Rings and Endomorphisms** Askar Tuganbaev,2019-06-04 This book offers a comprehensive account of not necessarily commutative arithmetical rings examining structural and homological properties of modules over arithmetical rings and summarising the interplay between arithmetical rings and other rings whereas modules with extension properties of submodule endomorphisms are also studied in detail Graduate students and researchers in ring and module theory will find this book particularly valuable   **Value Distribution Theory Related to Number Theory** Pei-Chu Hu,Chung-Chun Yang,2006-10-06 The subject of the book is Diophantine approximation and Nevanlinna theory This book proves not just some new results and directions but challenging open problems in Diophantine approximation and Nevanlinna theory The authors newest research activities on these subjects over the past eight years are collected here Some of the significant findings are the proof of Green Griffiths conjecture by using meromorphic connections and Jacobian sections generalized abc conjecture and more   *Six Lectures on Commutative Algebra* J. Elias,J. M. Giral,Rosa M. Miró-Roig,Santiago Zarzuela,2010-03-17 Interest in commutative algebra has surged over

the past decades In order to survey and highlight recent developments in this rapidly expanding field the Centre de Recerca Matematica in Bellaterra organized a ten days Summer School on Commutative Algebra in 1996 Lectures were presented by six high level specialists L Avramov Purdue M K Green UCLA C Huneke Purdue P Schenzel Halle G Valla Genova and W V Vasconcelos Rutgers providing a fresh and extensive account of the results techniques and problems of some of the most active areas of research The present volume is a synthesis of the lectures given by these authors Research workers as well as graduate students in commutative algebra and nearby areas will find a useful overview of the field and recent developments in it Reviews All six articles are at a very high level they provide a thorough survey of results and methods in their subject areas illustrated with algebraic or geometric examples Acta Scientiarum Mathematicarum Avramov lecture it contains all the major results on infinite free resolutions it explains carefully all the different techniques that apply it provides complete proofs This will be extremely helpful for the novice as well as the experienced Mathematical reviews Huneke lecture The topic is tight closure a theory developed by M Hochster and the author which has in a short time proved to be a useful and powerful tool The paper is extremely well organized written and motivated Zentralblatt MATH Schenzel lecture this paper is an excellent introduction to applications of local cohomology Zentralblatt MATH Valla lecture since he is an acknowledged expert on Hilbert functions and since his interest has been so broad he has done a superb job in giving the readers a lively picture of the theory Mathematicalreviews Vasconcelos lecture This is a very useful survey on invariants of modules over noetherian rings relations between them and how to compute them Zentralblatt MATH   Rings, Modules, and Closure Operations Jesse Elliott,2019-11-30 This book presents a systematic exposition of the various applications of closure operations in commutative and noncommutative algebra In addition to further advancing multiplicative ideal theory the book opens doors to the various uses of closure operations in the study of rings and modules with emphasis on commutative rings and ideals Several examples counterexamples and exercises further enrich the discussion and lend additional flexibility to the way in which the book is used i e monograph or textbook for advanced topics courses   Nearrings, Nearfields And Related Topics Kuncham Syam Prasad,Kedukodi Babushri Srinivas,Panackal Harikrishnan,Bhavanari Satyanarayana,Kent Neuerburg,G L Booth,Bijan Davvaz,Mark Farag,S Juglal,Ayman Badawi,2016-11-28 Recent developments in various algebraic structures and the applications of those in different areas play an important role in Science and Technology One of the best tools to study the non linear algebraic systems is the theory of Near rings The forward note by G   **Topological Rings** S. Warner,1993-07-07 This text brings the reader to the frontiers of current research in topological rings The exercises illustrate many results and theorems while a comprehensive bibliography is also included The book is aimed at those readers acquainted with some very basic point set topology and algebra as normally presented in semester courses at the beginning graduate level or even at the advanced undergraduate level Familiarity with Hausdorff metric compact and locally compact spaces and basic properties of continuous functions also with groups rings fields vector spaces and modules and with Zorn s

Vasantha Kandasamy,2002 Generally in any human field a Smarandache Structure on a set A means a weak structure W on A such that there exists a proper subset B in A which is embedded with a stronger structure S These types of structures occur in our everyday life that s why we study them in this book Thus as a particular case A Near Ring is a non empty set N together with two binary operations and such that N is a group not necessarily abelian N is a semigroup For all a b c in N we have a b c a c b c A Near Field is a non empty set P together with two binary operations and such that P is a group not necessarily abelian P 0 is a group For all a b c I P we have a b c a c b c A Smarandache Near ring is a near ring N which has a proper subset P in N where P is a near field with respect to the same binary operations on N   **Selected Papers and Other Writings** Irving Kaplansky,1995-04-13 It is not often that one gets to write a preface to a collection of one s own papers The most urgent task is to thank the people who made this book possible That means first of all Hy Bass who on behalf of Springer Verlag approached me about the idea The late Walter Kaufmann Biihler was very encouraging Paulo Ribenboim helped in an important way and Ina Lindemann saw the project through with tact and skill that I deeply appreciate My wishes have been indulged in two ways First I was allowed to follow up each selected paper with an afterthought Back in my student days I became aware of the Gesammelte Mathematische Werke of Dedekind edited by Fricke Noether and Ore I was impressed by the editors notes that followed most of the papers and found them very usefuL A more direct model was furnished by the collected papers of Lars Ahlfors in which the author himself supplied afterthoughts for each paper or group of papers These were tough acts to follow but I hope that some readers will find at least some of my afterthoughts interesting Second I was permitted to add eight previously unpublished items My model here to a certain extent was the charming little book A Mathematician s Miscel lany by J E Littlewood In picking these eight I had quite a selection to make from fourteen loose leaf notebooks of such writings Here again I hope that at least some will be found to be of interest   *Characterization of Weak Bi-Ideals in Bi-Near Rings* S.
