Medication Madness Peter R. Breggin, 2009-05-26 Medications for everything from depression and anxiety to ADHD and insomnia are being prescribed in alarming numbers across the country but the cure is often worse than the original problem Medication Madness is a fascinating frightening and dramatic look at the role that psychiatric medications have played in fifty cases of suicide murder and other violent criminal and bizarre behaviors As a psychiatrist who believes in holding people responsible for their conduct the weight of scientific evidence and years of clinical experience eventually convinced Dr Breggin that psychiatric drugs frequently cause individuals to lose their

judgment and their ability to control their emotions and actions Medication Madness raises and examines the issues surrounding personal responsibility when behavior seems driven by drug induced adverse reactions and intoxication Dr Breggin personally evaluated the cases in the book in his role as a treating psychiatrist consultant or medical expert He interviewed survivors and witnesses and reviewed extensive medical occupational educational and police records The great majority of individuals lived exemplary lives and committed no criminal or bizarre actions prior to taking the psychiatric medications Medication Madness reads like a medical thriller true crime story and courtroom drama but it is firmly based in the latest scientific research and dozens of case studies The lives of the children and adults in these stories as well as the lives of their families and their victims were thrown into turmoil and sometimes destroyed by the unanticipated effects of psychiatric drugs In some cases our entire society was transformed by the tragic outcomes Many categories of psychiatric drugs can cause potentially horrendous reactions Prozac Paxil Zoloft Adderall Ritalin Concerta Xanax lithium Zyprexa and other psychiatric medications may spellbind patients into believing they are improved when too often they are becoming worse Psychiatric drugs drive some people into psychosis mania depression suicide agitation compulsive violence and loss of self control without the individuals realizing that their medications have deformed their way of thinking and feeling This book documents how the FDA the medical establishment and the pharmaceutical industry have over sold the value of psychiatric drugs It serves as a cautionary tale about our reliance on potentially dangerous psychoactive chemicals to relieve our emotional problems and provides a positive approach to taking personal charge of our lives
