The Syntax-Morphology Interface Matthew Baerman,Dunstan Brown,Greville G. Corbett,2005-09-15 Syncretism where a single form serves two or more morphosyntactic functions is a persistent problem at the syntax morphology interface It results from a mismatch whereby the syntax of a language makes a particular distinction but the morphology does not This pioneering book provides a full length study of inflectional syncretism presenting a typology of its occurrence across a wide range of languages The implications of syncretism for the syntax morphology interface have long been recognised it argues either for an enriched model of feature structure thereby preserving a direct link between function and form or for the independence of morphological structure from syntactic structure This book presents a compelling argument for the autonomy of morphology and the resulting analysis is illustrated in a series of formal case studies within Network Morphology It will be welcomed by all linguists interested in the relation between words and the larger units of which they are a part
