Perspectives on Cognitive Science, Volume 1 Peter Slezak,Terry Caelli,Richard L. Clark,1995 *Perspectives on Cognitive Science. [vol. 1]-* ,1995 *Mental Mechanisms* William Bechtel,2012-08-21 A variety of scientific disciplines have set as their task explaining mental activities recognizing that in some way these activities depend upon our brain But until recently the opportunities to conduct experiments directly on our brains were limited As a result research efforts were split between disciplines such as cognitive psychology linguistics and artificial intelligence that investigated behavior while disciplines such as neuroanatomy neurophysiology and genetics experimented on the brains of non human animals In recent decades these disciplines integrated and with the advent of techniques for imaging activity in human brains the term cognitive neuroscience has been applied to the integrated investigations of mind and brain This book is a philosophical examination of how these disciplines continue in the mission of explaining our mental capacities **Perspectives on Cognitive Science, Volume 2** Janet Wiles,Terry Dartnall,1999-04-28 The papers in this collection and the editors introductions illustrate the ferment of ideas the wide range of theories methods and approaches and the rich fruits of the cognitive revolution **Handbook of Cognitive Science** Paco Calvo,Antoni Gomila,2008-08-15 The Handbook of Cognitive Science provides an overview of recent developments in cognition research relying upon non classical approaches Cognition is explained as the continuous interplay between brain body and environment without relying on classical notions of computations and representation to explain cognition The handbook serves as a valuable companion for readers interested in foundational aspects of cognitive science and neuroscience and the philosophy of mind The handbook begins with an introduction to embodied cognitive science and then breaks up the chapters into separate sections on conceptual issues formal approaches embodiment in perception and action embodiment from an artificial perspective embodied meaning and emotion and consciousness Contributors to the book represent research overviews from around the globe including the US UK Spain Germany Switzerland France Sweden and the Netherlands The Analogical Mind Dedre Gentner,Keith J. Holyoak,Boicho N. Kokinov,2001-03-02 Analogy has been the focus of extensive research in cognitive science over the past two decades Through analogy novel situations and problems can be understood in terms of familiar ones Indeed a case can be made for analogical processing as the very core of cognition This is the first book to span the full range of disciplines concerned with analogy Its contributors represent cognitive developmental and comparative psychology neuroscience artificial intelligence linguistics and philosophy The book is divided into three parts The first part describes computational models of analogy as well as their relation to computational models of other cognitive processes The second part addresses

the role of analogy in a wide range of cognitive tasks such as forming complex cognitive structures conveying emotion making decisions and solving problems The third part looks at the development of analogy in children and the possible use of analogy in nonhuman primates Contributors Miriam Bassok Consuelo B Boronat Brian Bowdle Fintan Costello Kevin Dunbar Gilles Fauconnier Kenneth D Forbus Dedre Gentner Usha Goswami Brett Gray Graeme S Halford Douglas Hofstadter Keith J Holyoak John E Hummel Mark T Keane Boicho N Kokinov Arthur B Markman C Page Moreau David L Oden Alexander A Petrov Steven Phillips David Premack Cameron Shelley Paul Thagard Roger K R Thompson William H Wilson Phillip Wolff

Different Psychological Perspectives on Cognitive Processes Rossana Actis-Grosso, Alessandra Galmonte, 2015-02-27 This book highlights some of the main lines of research in cognitive psychology in the Alps Adria region which being geographically located in the centre of the European continent encompasses eleven regions from six different countries namely Austria Croatia Hungary Italy Serbia and Slovenia The reason for bringing together authors from different geographical areas and with different approaches to the broad discipline defined as Cognitive Science is detailed in the first section of this book which outlines a brief history of psychology in each country in the region and provides an overview of the spirit that characterizes the Alps Adria working community The Alps Adria Rector Conference believes that harmonious coexistence and efficient collaboration of the peoples and communities of the different regions constitute the characteristics and specificities of the present cultural landscape of the Alps Adria region in Europe It is in this spirit that this book has been edited underscoring the concept of unity in diversity that has characterized the Alps Adriatic community Furthermore such unity is now a necessary attribute for science where interdisciplinarity is both highly encouraged and increasingly accepted The second and third sections of the book are devoted to situating this interdisciplinarity in the framework of cognitive science As such this book will serve as a basis for fruitful exchange not only inside the community but also beyond both geographical and theoretical borders *Perspectives on Cognitive Science* ,1995
