Portfolio Of Lunar Drawings:

A Portfolio of Lunar Drawings Harold Hill, 2003-09-18 Harold Hill's achievement is to awaken us to the stark compelling beauty of the moon with its mighty ringwalls and glistening highlands Each image tells its own story Each is constructed with precision and attention to detail *Sketching the Moon* Richard Handy, Deirdre Kelleghan, Thomas McCague, Erika Rix, Sally Russell, 2011-12-11 For anyone artistically inclined observing the Moon and attempting to sketch or paint it can easily become a passion The Moon presents a broad array of tone texture and form Capturing this in a painting or sketch at the eyepiece of a telescope or even with binoculars develops observational skills leaves a record of the observation and can also be a delightful and rewarding pastime However the choice of media available is extensive acrylic paint oils pen charcoal etc and even computer art programs and there is no existing text that fully explains all lunar sketching and painting techniques in each respective medium This beautiful and graphically rich book fulfills this requirement It presents detailed step by step instructions in the form of illustrated tutorials for every major medium employed to represent the Moon It also provides practical advice on how to sketch outdoors at night not ideal conditions for an artist This is easily the most extensive book on the subject of lunar art for amateur astronomers particularly those observing through a telescope The diverse features of the lunar surface will attract and entice readers to review the number of different media presented exciting and inspiring them with the possibilities of learning to depict all of the fascinating aspects of Earth's very own satellite *Observing the Sun* Peter O. Taylor, 1991-11-21 Observing the Sun is one of the most interesting and rewarding facets of astronomy to which amateurs can contribute Few areas of science offer as many opportunities to contribute meaningful data It is the one branch of astronomy that requires only modest equipment and can be pursued during the day Peter Taylor is a keen and highly experienced observer of the Sun In this book he explains in a clear and practical way everything that a telescope user needs to know in order to make solar observations The author draws on his many years of personal experience as a contributor to the Solar Division of the American Association of Variable Star Observers and to the American Sunspot Program The book deals with the following topics historical background choice of equipment for the safe conduct of solar observations observations of sunspots and reporting observations New techniques such as electronic recording and the operations of radio telescopes are included The level of presentation is understandable to anyone with basic astronomical knowledge and some experience in handling a small telescope **Discover the Moon** Jean Lacroux, Christian Legrand, 2003 Table of contents *Lunar & Planetary Information Bulletin*, 1990 *Observing Comets, Asteroids, Meteors, and the Zodiacal Light* Stephen J. Edberg, David H. Levy, 1994-10-06 When can you see fireballs and who should you contact if you spot one When is it best to hunt for comets and meteors and whereabouts How do you gauge the size of the coma in the head of a comet and estimate its degree of condensation Clear and easy to use this guide shows you how to make successful and valuable observations and records of comets asteroids meteors and the zodiacal light For each topic the historical background and current scientific

understanding support a wealth of observational techniques Comet observers are shown techniques for search and discovery They can learn how to make visual estimates of brightness and size and how to make photographic studies of cometary heads and tails Asteroid hunters will find a life list of quarry and guidelines on how to search for these objects and then how to photograph or electronically image them Fruitful photographic and electronic methods for studying meteors and meteor showers are provided Visual and photographic techniques show you how to examine the often elusive zodiacal light The more adventurous are provided with advanced techniques on how to make successful astrometric spectroscopic and electronic observations This is rounded off with an invaluable list of centres world wide to contact with your details of unusual sightings

The Moon and How to Observe It Peter Grego,2005-12-16 This revolutionary new book is written for practical amateur astronomers who not only want to observe but want to know the details of exactly what they are looking at The Moon is the most commonly observed of all astronomical objects This is the first book to deal equally with the Moon itself its formation geology and history as well as the practical aspects of observation The concept of the book and of the series is to present an up to date detailed description of the Moon including its origins history and geology part one and then part two to consider how best to observe and record it successfully using commercially available equipment The Moon and How to Observe It is a mine of information for all levels of amateur observers from the beginner to the experienced Yearbook of Astronomy 2020 Brian Jones,2019-10-19 The celebrated annual for sky watchers and stargazers including references and a variety of fascinating articles The Yearbook of Astronomy series is known for its comprehensive jargon free monthly sky notes and authoritative sky charts that enable backyard astronomers and sky gazers everywhere to plan their viewing of the year s eclipses comets meteor showers and minor planets as well as detailing the phases of the moon and visibility and locations of the planets throughout the year Every annual edition also includes a variety of entertaining and informative articles Among the wide ranging articles in this edition are 200 Years of the Royal Astronomical Society The Naming of Stars Astronomical Sketching Dark Matter and Galaxies Eclipsing Binaries The First Known Black Hole A Perspective on the Aboriginal View of the World and more First appearing in 1962 shortly after the dawning of the Space Age Yearbook of Astronomy continues to be essential reading for any sky watcher or stargazer amateur and professional alike who wants to expand their knowledge of the universe and its wonders *Return to the Far Side of Planet Moore!* Martin Mobberley,2015-03-20 The result of an exhaustive study of Sir Patrick Moore s observations of the Moon and planets for more than 60 years this book is a fantastic companion to the extremely popular *It Came From Outer Space Wearing an RAF Blazer* written by the same author Moore recorded his telescopic observations in his logbooks which are reproduced and described here in detail along with his sketches and notes In this light the author discusses the factors that caused Moore to switch from lunar observing to planetary and variable star observing He has also included personal recollections and humorous anecdotes from Moore s friends and acquaintances as well as a look at his best loved books Further chapters describe Moore s foreign travels and

correspondence with those back home Lastly the author has not neglected a few of Moore s most memorable television and radio appearances which are examined along with a close up of what it was like to visit Moore s beloved home of Farthings in Selsey Essentially this is a book written by popular demand from the readers of the author s original biography who craved more of Moore

Observing the Moon Gerald North,2000-07-27 Written by an experienced and well known lunar observer this is a hands on primer for the aspiring observer of the Moon Whether you are a novice or are already experienced in practical astronomy you will find plenty in this book to help you raise your game to the next level and beyond The author provides extensive practical advice and sophisticated background knowledge of the Moon and of lunar observation The selection construction of equipment and optimizing of existing equipment for such projects as drawing photographing and CCD imaging of the Moon are covered together with analysis and computer processing images and much much more Learn what scientists have discovered about our Moon and what mysteries remain still to be solved Find out how you can take part in the efforts to solve these mysteries as well as enjoying the Moon s spectacular magnificance for yourself

Messier's Nebulae and Star Clusters Kenneth Glyn Jones,1991-04-04 Charles Messier s catalog of nebulae and star clusters published in 1784 marked the start of a new era of deep sky astronomy Today this tradition of observing galaxies and clusters is kept alive by dedicated amateur astronomers Nearly all the objects are visible in a small telescope and many such as the Crab Nebula and the Andromeda galaxy are among the most fascinating objects in the universe Kenneth Glyn Jones has revised his definitive version of Messier s catalog His own observations and drawings together with maps and diagrams make this a valuable introduction to deep sky observing Historical and astrophysical notes bring the science of these nebulae right up to date This is a unique handbook unlikely ever to be equaled in its completeness and importance to the telescope owner

High Resolution Astrophotography Jean Dragesco,1995-07-20 This 1995 guide is packed with practical tips on how to obtain the highest resolution in your astrophotography

[The Space Age Generation](#) William Sheehan,Klaus R. Brasch,2024-03-05 The Space Age Generation shares the lives and careers of a dozen men and women whose passion for science was sparked by an astounding era the golden age of space science These scientists historians and astronomers lived and participated in an amazing time that not only saw humans step foot on the Moon but also saw human made spacecraft travel throughout our solar system

The Moon Bill Leatherbarrow,2018-05-15 The moon has always been the most obvious feature in our night sky It is our nearest celestial neighbour orbiting the earth at an average distance of 384 400 kilometers and is large enough to display significant detail even to the unaided eye Our moon has drawn observers since the dawn of humankind and all people have tried to make sense of the puzzles it poses and the questions it raises The moon provided our ancient ancestors with one of the earliest means of keeping and measuring time and many early religions had cults that worshipped it When it eclipses the sun it provides one of the most awe inspiring views in nature In The Moon celebrated amateur astronomer Bill Leatherbarrow provides expert insight into the history of our study of this compelling

astronomical body Drawing on his own decades of lunar observation he describes how and why the observation and study of the moon has evolved particularly in the age of telescopic study He also offers an overview of current scientific thinking and developments in lunar science since the advent of the Space Age even providing practical advice on how to make your own observations of the moon Extensively illustrated with images of the lunar surface taken both from spacecraft and using amateur equipment this book is an accessible introduction to complex astrophysical concepts that will give all amateur astronomers and anyone fascinated by this natural satellite something to moon over **The Observer's Guide to**

Astronomy: Volume 2 Patrick Martinez, 1994-09-22 How can you find new minor planets comets and novae How can you use photoelectric detectors to derive the temperatures of stars And how can you predict future eclipses and occultations of stars by minor planets The questions asked by serious amateur astronomers are answered in this authoritative and wide ranging guide first published in 1994 For each topic sound practical methods of observation and the scientific background are given to lead you to better observations Guidelines also show you how to record and catalogue your observations using the recognised professional terminology and classification schemes From the simplest pencil drawings of the moon to observations of the most distant galaxies with state of the art CCD cameras and photoelectric photometers this guide is packed with practical tips for all types of amateur observations It will develop the observational skills of the keen novice and satisfy the more demanding needs of the experienced amateur astronomer **Penetration: Special Edition Updated** Ingo

Swann, 2020-11-29 UPDATED WITH NEW MATERIAL FOUND IN HAROLD SHERMAN S ARCHIVES Ingo Swann renowned psi researcher reveals a long held secret series of experiences with a deep black agency whose apparent charter was simple UFOs and extraterrestrials on the moon and worries about ET telepathic mind control powers The agency was so secret that it had no paper trail and hence no written secrecy agreements Only the verbal ones which in Ingo s case expired several years ago Now in this era of burgeoning UFO glasnost he tells a story of meetings held in a secret underground facility not far from Washington DC and of being taken to a remote location near the Arctic Circle to witness the expected arrival of a huge UFO over the surface of an Alaskan lake This book discusses undeveloped human telepathy and contrasts it with the probable existence of fully developed alien telepathy which may have many different forms Ingo also explores the fact that we officially know far more than we re admitting about the Moon its origins its atmosphere its occupants and many other unusual features Penetration is about one of the means by which we can learn more about those not of this earth and vice versa telepathy Do we have the means to answer some very important questions that many have been asking for quite a long time Inside this book are the answers to some PLUS In a newly discovered missing chapter on his psychic probes of Mars 9 to Penetration Ingo asserts that there is a bigger question at play the question as to why do mass consciousness humans as it were mass consciously almost conspire to avoid certain issues and consistently so This inquiry deep within Ingo s own awareness is one that he would ponder until his passing in 2013 He no doubt wished to share this interrogation with the

world back in 1998 Thus while Neptune goes direct in Pisces removing the veils and providing an awakening of sorts we have decided put Ingo's question to the world by including 9 along with Introductions by Dr Krippner and Dr Mitchell an Afterword by Thomas M McNear Lieutenant Colonel U S Army Ret and recently discovered documents from Harold Sherman's Archives in this Updated Special Edition all within an aptly named section entitled Subscript [Moon Observer's Guide](#) Peter Grego,2004 A night by night guide to studying the moon The moon is usually the first celestial body that captures a stargazer's attention and imagination Throughout history the moon has endured as a universal subject of myth poems entertainment and intense scientific endeavor In clear language and with full color photographs and illustrations throughout Moon Observer's Guide offers practical guidance to amateur astronomers viewing Earth's only natural satellite There is valuable advice for observing the Moon with the naked eye binoculars and telescopes Central to this book is a detailed 28 day guide to lunar features Lunar geology and the various causes of physical features such as craters and volcanoes are described Also included are Guidelines for choosing binoculars and telescopes Ways of recording observations Digital and conventional photography Using Internet resources personal computers and lunar software programs Safety tips for observing the moon during solar and lunar eclipses Detailed moon maps This book is an ideal reference for the growing numbers of beginning astronomers *Extraterrestrial Archaeology* David Hatcher Childress,2000 Occasionally reissued with the same ISBN but with slightly differing bibliographical details **Information Handling in Astronomy - Historical Vistas** Andre Heck,2006-04-18 This book is dedicated to the memory of Gis le Mersch whose life ended prematurely in June 2002 Back in the 1970s when few people were using them Gis le introduced me to the arcane secrets of then advanced multivariate statistical methodologies I was already involved in more classical statistical studies undertaken at Paris Observatory with Jean Jung developing and applying maximum likelihood algorithms to stellar photometric and kinematic data in order to derive absolute luminosities distances and velocities in the solar neighborhood But what could be envisaged with those methodologies was something of another dimension for the first time I could really see how to extract information from massive amounts of data without calling for elaborated physical or mechanical theories Several pioneering applications were developed under Gis le's guidance and with her collaboration to study the delicate interface between spectroscopic and photometric data Thus errors in spectral classifications were investigated as well as predictions of spectral classifications from photometric indices see Heck 1976 Heck et al 1977 Heck Mersch 1980 and Mersch Heck 1980 with very interesting results for the time Gis le also took part in studies of period determination algorithms see Mersch Heck 1981 Manfroid et al 1983 and Heck et al 1985 **The Observer's Guide to Astronomy** Patrick Martinez,1994
