

agement plan is adopted. In some cases, the development of water supply from coastal rivers is contingent on avoiding adverse environmental impacts. This may involve withdrawing no water from streams during periods of low flow. In such cases, a conjunctive use scheme may be the only way to increase regional safe yield with moderate cost.

These circumstances illustrate some functional advantages of regionalization, which, with scale and other operational advantages described by the author, cause it to be considered more and more. It may be added that regionalization may not always be in the public interest. It may be advocated for quite different reasons, including the desire of ambitious managers, either of public or investor-owned systems, to increase the scale of the operations under their control.

Whipple, W., Jr. (1987). "Strategy for managing depleted aquifers." *J. Water Resour. Plng. and Mgmt.*, ASCE, 113(3), 368-377.

Closure by Neil S. Grigg,³ Fellow, ASCE

In this closure I would like to address the issue of water management integration. Its complexity can be fathomed by using a classification system for examples of water management integration. Whipple's discussion adds interesting examples of regionalization to the original paper. New Jersey is an apparent leader in innovating with regionalization concepts in water-supply management, and I would like to comment later on how the examples fit into different categories of water management integration.

As discussed in the original paper, the concept of regionalization is closely related to the term *integration* as it relates to the water-supply industry. The definition presented in the original paper was "regionalization in water management is integration or cooperation on a regional basis." As examples such as those cited by Whipple emerge, it seems useful to classify water management integration, and the following five types are apparent: political, functional, hydrologic-ecologic, geographic, and disciplinary. Using these classifications can provide illumination for the complex subject of integration in water management.

Political integration can be either horizontal, where agencies at the same level of government integrate efforts, or vertical, where agencies at different levels of government integrate efforts. Functional integration means to integrate the functions or purposes of water management. The term is closely related to multipurpose water management, depending on the degree of actual integration.

Hydrologic-ecologic integration in water management covers the hydrologic and biologic systems. For example, conjunctive management of ground and surface water is hydrologic integration. Managing water quantity and quality together, while basically an example of functional integration, also aims to manage aquatic ecological systems.

examines how MSPs can make a difference and how they might successfully co-opt the public private and civil society sectors The book highlights the particular difficulties of MSPs when dealing with integrated water management programmes explaining how MSPs are most successful at a less complex and more local level It finally questions whether MSPs are or can be sustainable and puts forward suggestions for improving their durability

Rivers Lost, Rivers Regained Martin Knoll, Uwe Lubken, Dieter Schott, 2017-06-13 Many cities across the globe are rediscovering their rivers After decades or even centuries of environmental decline and cultural neglect waterfronts have been revamped up and become focal points of urban life again hidden and covered streams have been daylighted while restoration projects have returned urban rivers in many places to a supposedly more natural state This volume traces the complex and winding history of how cities have appropriated lost and regained their rivers But rather than telling a linear story of progress the chapters of this book highlight the ambivalence of these developments The four sections in *Rivers Lost Rivers Regained* discuss how cities have gained control and exerted power over rivers and waterways far upstream and downstream how rivers and floodplains in cityscapes have been transformed by urbanization and industrialization how urban rivers have been represented in cultural manifestations such as novels and songs and how more recent strategies work to redefine and recreate the place of the river within the urban setting At the nexus between environmental urban and water histories *Rivers Lost Rivers Regained* points out how the urban river relationship can serve as a prime vantage point to analyze fundamental issues of modern environmental attitudes and practices

Transboundary Water Resources Management Jacques Ganoulis, Lucien Duckstein, Peter Literathy, Istvan Bogardi, 2013-04-17 In a world facing a growing water crisis conflicts regarding water sharing and environmental issues are expected to grow especially in transboundary river basins where 40% of the world's population lives This book represents one of the first attempts to bring together methodologies and analytical tools from socio economic international policy engineering and water management specialists dealing with transboundary water resources The book is divided into three parts Part I introduces state of the art concepts in institutional policy and conflict analysis Part II presents engineering approaches and models for transboundary water management and conflict resolution Part III analyzes cases in international river basins and enclosed seas

Beecher,1999 **Water Pollution Control** Richard Helmer,Ivanildo Hespanhol,1997-10-02 This is a handbook for policy makers and environmental managers in water authorities and engineering companies engaged in water quality programmes especially in developing countries It is also suitable for use as a textbook or as training material for water quality management courses It is a companion volume to Water Quality Assessment and Water Quality Monitoring **Scaling Urban Environmental Challenges** Peter J. Marcotullio,Gordon McGranahan,2012-06-25 Think globally act locally emphasizes the importance of scale in dealing with environmental challenges but not how to factor it in This major new book focuses on the spatial dimensions of urban environmental burdens showing how important it is to take these into account when pursuing environmental justice and good governance whether in the context of the sanitary risks of slum living the pollution of uncontrolled industrialization and motorization or the enormous ecological footprints of affluent urban lifestyles Written by leading experts in the fields of urban development and environmental planning the book reviews the urban environmental shifts that have shaped today's challenges and examines conditions and problems in the urban centres of low middle and high income countries Case studies address such economically diverse cities as Accra New Delhi Mexico City and Manchester while thematic chapters explore issues including water sanitation and transportation The book concludes by exploring and analysing different scales of governance The editors argue that we should not rely solely on local governance to address local burdens like poor sanitation nor depend only on global governance for global challenges such as greenhouse gas emissions but that scale is crucial in both understanding the problems and devising successful responses Published with UNU IAS and IIED *Global Issues in Water, Sanitation, and Health* Institute of Medicine,Board on Global Health,Forum on Microbial Threats,2009-10-25 As the human population grows tripling in the past century while simultaneously quadrupling its demand for water Earth's finite freshwater supplies are increasingly strained and also increasingly contaminated by domestic agricultural and industrial wastes Today approximately one third of the world's population lives in areas with scarce water resources Nearly one billion people currently lack access to an adequate water supply and more than twice as many lack access to basic sanitation services It is

projected that by 2025 water scarcity will affect nearly two thirds of all people on the planet Recognizing that water availability water quality and sanitation are fundamental issues underlying infectious disease emergence and spread the Institute of Medicine held a two day public workshop summarized in this volume Through invited presentations and discussions participants explored global and local connections between water sanitation and health the spectrum of water related disease transmission processes as they inform intervention design lessons learned from water related disease outbreaks vulnerabilities in water and sanitation infrastructure in both industrialized and developing countries and opportunities to improve water and sanitation infrastructure so as to reduce the risk of water related infectious disease
