Handbook of Environmental Economics Karl-Göran Mäler,Jeffrey R. Vincent,2003 The Handbook of Environmental Economics focuses on the economics of environmental externalities and environmental public goods Volume I examines environmental degradation and policy responses from a microeconomic institutional standpoint Its perspective is dynamic including a consideration of the dynamics of natural systems and global with attention paid to issues in both rich and poor nations In addition to chapters on well established topics such as the theory and practice of pollution regulation it includes chapters on new areas of environmental economics research related to common property management regimes population and poverty mechanism design political economy of regulation experimental evaluations of policy instruments and technological change

Handbook of Environmental Economics Karl-Goran Maler,Jeffrey R. Vincent,2005-12-09 Much applied environmental economics is concerned with the valuation of changes in environmental quality Obtaining reliable valuation estimates requires attention to theoretical and econometric issues that are often quite subtle Volume 2 of the Handbook of Environmental Economics presents both the theory and the practice of environmental valuation It synthesizes the vast literature that has accumulated since the publication of the Handbook of Natural Resource and Energy Economics two decades ago It includes chapters on individual valuation methods written by researchers responsible for fundamental advances in those methods It also includes cross cutting chapters that deal with aspects of welfare theory uncertainty experimental methods and public health that are pertinent to valuation Throughout the volume attention is paid to research and policy issues that arise not only in high income countries where most of the theory and econometrics that underlie applied valuation methods have been developed but also in poorer parts of the world The volume provides a state of the art

Ethics Of Chemistry: From Poison Gas To Climate Engineering Joachim Schummer, Tom Borsen, 2021-02-08 Overall this collection of case studies provides an outstanding starting point for understanding the ethics of chemistry It is an extremely important contribution to the study of chemical ethics Ethics of Chemistry is a key resource for educators interested in integrating ethics instruction into their chemistry curricula an important foundation for equipping students with the moral judgement and analytical skills necessary to contend with the ethical issues they are likely to face in their professional lives Nature Chemistry the book offers a general introduction to many relevant topics concerning the values responsibilities and judgements in and of chemistry The volume could be helpful for university students and teachers or even general readers interested in the ethics of chemistry Read Full Review Jos Ram n Bertomeu S nchezAmbixAlthough chemistry has been the target of numerous public moral debates for over a century there is still no academic field of ethics of chemistry to develop an ethically balanced view of the discipline And while ethics courses are increasingly demanded for science and engineering students in many countries chemistry is still lagging behind because of a lack of appropriate teaching material This volume fills both gaps by establishing the scope of ethics of chemistry and providing a case based approach to teaching thereby also narrating a cultural history of chemistry From poison gas in WWI to climate engineering of the future this volume covers the most important historical cases of chemistry It draws lesson

from major disasters of the past such as in Bhopal and Love Canal or from thalidomide Agent Orange and DDT It further introduces to ethical arguments pro and con by discussing issues about bisphenol A polyvinyl chloride and rare earth elements as well as of contested chemical projects such as human enhancement the creation of artificial life and patents on human DNA Moreover it illustrates chemical engagements in preventing hazards from the prediction of ozone depletion to Green Chemistry and research in recycling industrial substance substitution and clean up Students also learn about codes of conduct and chemical regulations An international team of experts narrate the historical cases and analyse their ethical dimensions All cases are suitable for undergraduate teaching either in classes of ethics history of chemistry or in chemistry classes proper

Management of Contaminated Site Problems, Second Edition Kofi Asante-Duah, 2019-04-12 This book outlines the strategies used in the investigation characterization management and restoration and remediation for various contaminated sites It draws on real world examples from across the globe to illustrate remediation techniques and discusses their applicability It provides guidance for the successful corrective action assessment and response programs for any type of contaminated land problem and at any location The systematic protocols presented will aid environmental professionals in managing contaminated land and associated problems more efficiently This new edition adds twelve new chapters and is fully updated and expanded throughout

Public Health Risk Assessment for Human Exposure to Chemicals Kofi Asante-Duah, 2017-06-22 This book provides a concise yet comprehensive overview of the many facets relating to human health risk assessments in relation to chemical exposure problems It presents some very important tools and methodologies that can be used to address chemical exposure and public health risk management problems in a consistent efficient and cost effective manner On the whole the book represents a collection and synthesis of the principal elements of the risk assessment process that may be used to more effectively address issues pertaining to human exposures to chemicals found in modern societies This also includes an elaboration of pertinent risk assessment concepts and techniques methodologies for performing human health risk assessments Written for both the novice and the experienced the subject matter of this book is an attempt at offering a simplified and systematic presentation of public health risk assessment methods and application tools all these facilitated by a layout that will carefully navigate the user through the major processes involved A number of illustrative example problems are interspersed throughout the book in order to help present the book in an easy to follow pragmatic manner

Public Health Risk Assessment for Human Exposure to Chemicals K. Asante-Duah, 2002-09-30 In fact with the control and containment of most infectious conditions and diseases of the past millennium having been achieved in most developed countries and with the resultant increase in life expectancies much more attention seems to have shifted to degenerative health problems Many of the degenerative health conditions have been linked to thousands of chemicals regularly encountered in human living and occupational work environments It is important therefore that human health risk assessments are undertaken on a consistent basis in order to determine the potential impacts of the target

chemicals on public health Implementing the Environmental Protection Regime for the Antarctic D. Vidas, 2012-12-06

When the Protocol on Environmental Protection to the Antarctic Treaty entered into force on 14 January 1998 a new phase commenced for the Antarctic Treaty System. The parties to the Protocol are today confronting issues related to the implementation of a complex international environmental protection regime both in international and domestic contexts. Several crucial implementation questions need to be solved in order to enhance and make possible the implementation of the Protocol. What would be the consequences for the parties of a possible failure in resolving the pending implementation issues on what premises can the solutions be based and what then are the options available? This book provides a systematic overview of the implementation issues in sections on jurisdiction, control and enforcement in the Antarctic, Part I institutional support to the implementation of the Protocol, Part II normative support to the implementation of the Protocol, an Antarctic liability regime, Part III relationship with other international instruments and arrangements, Part IV and through a series of selected case studies issues involved in domestic implementation of the Protocol, Part V. This is a book that will appeal to Antarctic specialists and to all those interested in environmental law and policy.

Coercive and Discursive Compliance Mechanisms in the Management of Natural Resources Geir Hønneland, 2000-05-31 This book is the result of more than a decade's preoccupation with the issue of compliance in the Barents Sea fisheries: first as an interpreter in the Norwegian Coast Guard, then as a graduate student at the University of Tromsø and finally as a PhD student at the University of Oslo and a research fellow at the Fridtjof Nansen Institute (FNI). Many of those who deserve a thank you in this preface have already been properly thanked on other occasions; among them my previous colleagues and superiors in the Norwegian Coast Guard. On the present occasion I would particularly like to extend my thanks to the FNI leadership during my time here for giving me the trust and freedom to pursue my enthusiasm. Many other colleagues at the institute, from both the research and the administrative staff, have contributed to the present work. For fear of forgetting someone I prefer not to mention names. There have to be a few exceptions though. From the administration I would particularly like to thank Kari Lorentzen for her professional help in the library and Ann Skarstad and Anne Christine Thestrup for language assistance. Thanks to Claes Lykke Ragner for producing the map on page 7 and to Ivar M. Liseter for help in the preparation of camera-ready copy. Among the research staff I would mention my long-standing fellow student and colleague both in the Coast Guard and at the FNI, Anne Kristin Jørgensen.

The Handbook of Environmental Voluntary Agreements Edoardo Croci, 2005-10-06
EDOARDO CROCI IFEF Università Bocconi Milano Italy Voluntary approaches in environmental policy represent a third wave of regulation in the environmental field. Command and control was the first wave. Its core is based on uniform emission standards the respect of which needs to be enforced through extensive monitoring and severe sanctions. The expected cost of sanction for non compliance calculated as its amount multiplied for the probability to be caught must be superior to the benefits of non compliance in order to let the sanction be effective. As the benefits of non compliance can vary among firms

sanctions need to be very high in order to be effective In fact sanctions are ordinary correlated to environmental damage and not to the benefits of non compliance But very high sanctions can be difficult to enforce as they appear unfair and can lead to dramatic consequences on firms and workers up to shut downs of plants Ambient standards reduce these problems but oblige the regulator to know a huge amount of information regarding the specific contribution of each polluter to the polluted body Information is difficult to obtain because of asymmetric information and costly to produce because it requires large and skilled regulating and enforcing organizations Nevertheless complex regulation is the base of any environmental policy framework as it allows the policy maker to fully exercise its power of composition of various interests in a relatively transparent way Economic instruments were the second wave

International Environmental Law and Policy in Africa

B. Chaytor, K.R. Gray, 2013-11-11 C O OKID11 I welcome the opportunity to prepare a Foreword to the book on Environmental Policy and Law in Africa edited by Kevin R Gray and Beatrice Chaytor It is a pleasure to do that because the book is a contribution to the cause of capacity building for development and implementation of environmental law in Africa a goal towards which I have had an undivided focus over the last two decades There is still some belief in and outside Africa that for developing countries in general and Africa in particular development and implementation of environmental law is not a priority This belief prevails strongly in many quarters of the industrialised countries In fact the view is held either out of blatant ignorance or by some renegade industrialists who fail to appreciate Michael Royston s 1979 thesis that Pollution Prevention Pays 2 That group for obvious reasons must have their correspondent counterparts in Africa to provide hope that industries rejected as derelict in the West or inoperable due to rigorous environmental regulation can find homes to which they can escape and dump their polluting industries

Law and Economics of International Climate Change Policy R.

Schwarze, 2013-03-09 International climate change policy can be broadly divided into two periods A first period where a broad consensus was reached to tackle the risk of global warming in a coordinated global effort and a second period where this consensus was finally framed into a concrete policy The first period started at the Earth Summit of Rio de Janeiro in 1992 where the United Nations Framework Convention on Climate Change UNFCCC was opened for signature The UNFCCC was subsequently signed and ratified by 174 countries making it one of the most accepted international treaties ever The second period was initiated at the 3 Conference of the Parties COP3 to the UNFCCC in Kyoto in 1997 which produced the Kyoto Protocol KP Till now eighty four countries have signed the Kyoto Protocol but only twelve ratified it A major reason for this slow ratification is that most operational details of the Kyoto Protocol were not decided in Kyoto but deferred to following conferences This deferral of the details while probably appropriate to initially reach an agreement is a major stepping stone for a speedy ratification of the protocol National policy makers and their constituencies who would ultimately bear the cost of Kyoto are generally not prepared to ratify a treaty that could mean anything from an unsustainable strict regime of international control of greenhouse gases GHGs to an L regime of loopholes or from a pure market based

Environmental Stewardship D.A. Fuchs,2013-03-09 What is the role of government in environmental politics and policy The answer to this question used to be relatively clear Government was to regulate the environmental performance of state and non state actors to set standards impose charges and establish more or less stringent criteria of acceptable behavior With the increasing appearance of the issues of globalization and global governance in the political science literature however the focus has turned to the role of non state actors Academic research and the popular debate have identified business non governmental organizations NGOs and civil society as such as increasingly important and potentially powerful actors in the political arena At the same time some observers have proclaimed the influence of government to be declining Others have argued that the role of government primarily is changing rather than declining Those who adopt the latter perspective postulate that the new role for government in this changing political and socio economic context is to set the framework for action In this perspective government is still of fundamental importance for the functioning of the society the economy and political decision making but its role is different in that government merely provides the institutional framework facilitating desired outcomes Sustainable Protein Production and Consumption: Pigs or Peas? Harry

Aiking,Joop de Boer,Johan Vereijken,2006-10-12 Sustainable Protein Production and Consumption Pigs or Peas is a book that presents and explores the PROFETAS programme for development of a more sustainable food system by studying the feasibility of substituting meat with plant based alternatives The emphasis is on improving the food system by reducing the use of energy land and freshwater at the same time limiting the impacts on health and animal welfare associated with intensive livestock production It is clear that such a new perspective calls not only for advanced environmental and technological research but also for in depth societal research as the acceptance of new food systems is critically contingent on perceptions and attitudes of modern consumers In this unique multidisciplinary setting PROFETAS has opened up pathways for a major transition in protein food production and consumption not by just analyzing the food chain but rather by exploring the entire agricultural system including biomass for energy production and the use of increasingly scarce freshwater resources The study presented here is intended to benefit every stakeholder in the food chain from policymakers to consumers and it offers guiding principles for a transition towards an ecologically and socially sustainable food system from a multi level perspective Environmental Politics and Liberation in Contemporary Africa M.A. Salih,2013-03-14

Nowadays the environment looms large in the analysis of conflict in developing societies and the precise role it plays is the subject of an ongoing debate The debate has moved on from the earlier but still popular notions of power struggles class struggles and ethnic conflicts to a perception of conflict as the product of intense group competition for resources Where the state controls the distribution of resources itself inevitably becomes party to conflicts whose bone of contention is access to state power as the most efficient means of gaining access to resources The resources in question are social health education

transportation communication recreation etc and material land water housing jobs contracts licenses permits etc In parts of the world and especially in Africa diminishing resources and authoritarian state rule exacerbate group competition leading to political confrontation This is the line I have followed in analysing conflict in the Horn of Africa Markakis 1987 1998 Mohamed Salih's first contribution in this volume is to move the debate a step beyond this line which can be criticized as unduly materialist He does it by bringing culture into the realm of resources not only as a resource in itself but also as the agency that assigns natural resources their value Culture thus becomes a contextual element in conflict over resources whose value is culturally determined

Institutional Dynamics in Environmental Governance Bas Arts, Pieter Leroy, 2006-09-09 Environmental policy in its broadest context has been significantly revitalized and renewed during the last two decades That observation is nothing new attested to by the number of publications conferences and both private and public projects that have been initiated However our understanding of the dynamics of this renewal has generally been informed by studies on single policies and projects leaving us with a limited understanding of what the newness consists of in terms of an integrated perspective This book presents fresh analyses of a number of well known cases but does so from one comprehensive view the so called policy arrangement approach Cases discussed range over organic farming integrated water management nature policy cultural heritage policy integrated region oriented policy corporate environmental management and target group policy always in search of the commonality of experience and conclusions to be drawn in understanding the past and in formulating future perspectives

Governance of Water-Related Conflicts in Agriculture F.M. Brouwer, I. Heinz, T. Zabel, 2013-03-14 This book deals with voluntary approaches between farmers and water suppliers as an instrument to meet environmental standards impacted by agricultural activities more economically efficient and environmentally effective than by exclusive application of alternative instruments including command and control approaches The book is based largely on the results of the research project Co operative Agreements in Agriculture as an Instrument to Improve the Economic Efficiency and Economic Effectiveness of the European Water Policy which was supplemented for specific issues by key experts The research was partly funded by the European Commission under the Specific RTD Programme in the Field of Environment and Climate Contract No ENV4 CT98 0782 and partly by the Ministry of Agriculture Nature Management and Fisheries in the Netherlands the Environment Agency in England and Wales the UK Ministry of Agriculture Fisheries and Food and the Government of the German Bundesland North Rhine Westphalia Additional funds for preparing the book were obtained from the Ministry of Agriculture Nature Management and Fisheries in the Netherlands The financial and technical support received from the different organisations is gratefully acknowledged The editors appreciate very much the efforts the authors have made in preparing their contributions for the book and for the secretarial assistance provided by Mrs Tessa van Dongen from LEI who took responsibility for guiding the publication process and preparing the chapters of the book We also appreciate the support given by Mrs Henny Hoogervorst and Mrs Gloria Verhey Kluwer Academic Publishers
