Government Failure versus Market Failure Clifford Winston, 2007-04-01 A Brookings Institution Press and American Enterprise Institute publication When should government intervene in market activity and when is it best to let market forces take their natural course How does the existing empirical evidence about government performance guide our answers to these questions In this clear concise book Clifford Winston offers his innovative analysis shaped by thirty years of evidence to assess the efficacy of government interventions Markets fail when it is possible to make one person better off without making someone else worse off thus indicating inefficiency Governments fail when an intervention is unwarranted because markets are performing well or when the intervention fails to correct a market problem efficiently Winston concludes from existing research that the cost of government failure may actually be considerably greater than the cost of market failure My search of the evidence is not limited to policy failures I will report success stories but few of them emerged from my search The prevalence of market failure is due to a lack of conviction in favor of markets the inflexibility of intervening government agencies and political forces that enable certain interest groups to benefit at the expense of society as a whole Winston suggests that government policy can be improved by making greater use of market oriented solutions that have already produced benefits in certain situations

Release Inventory's data which creates an incentive for firms to achieve emission reductions. Accordingly, public access to environmental information constitutes a core characteristic of the aforementioned inventory. Here, in essence, two facets arise. First, with regard to the collection, it is disputed whether such information, which may comprise confidential commercial and industrial information in the EU as well as trade secrets in the US, can be protected under fundamental and constitutional property rights respectively. Second, in the context of dissemination and utilisation, it is arguable whether the information indeed impacts polluters and produces an outcome that secures a certain level of environmental protection. The author responds to the first issue by taking the EU and US jurisdictions into account and strives to analyse how this novel form of Internet disclosure liberates market mechanisms in the quest for effective and efficient emission reductions.

Designing Rulemaking Claire A. Dunlop, Jonathan C. Kamkhaji, Claudio M. Radaelli, Gaia Taffoni, Claudius Wagemann, 2024-11-21. This is an open access title available under the terms of a CC BY-NC-ND 4.0 International licence. It is free to read on the Oxford Academic platform and offered as a free PDF download from OUP and selected open access locations. Over the last twenty-five years, many governments around the world have adopted access to information legislation, introduced or re-designed impact assessment procedures for proposed legislation, created ombudsman offices, and engaged stakeholders in various types of consultation. With a general aim of making rulemaking more transparent and inclusive and ultimately more efficient, these governments, nudged by the advocacy of International Organizations, have reformed the design of their rulemaking procedures and calibrated them in specific yet distinct ways. The question arises: do these innovations, designed to open up the rulemaking process and make regulation better, have an actual effect on policy and governance outcomes? In *Designing Rulemaking*, the authors answer this question with a novel purpose-built dataset on regulatory design based on the legal provisions disciplining four rulemaking procedures: impact assessment, stakeholder consultation, freedom of information, and ombudsman procedures. Examining twenty-eight countries, the EU, twenty-seven plus the UK, the dataset operationalises rules as data and measures the design features of each procedure in each country. The authors then, using set-theoretic methods, consider the effects of these combinations of designs of

rulemaking procedures on the quality of the business environment perception of corruption and environmental performance Their findings shatter predominant views on policy change in Europe and offer a varied detailed granular account of the efficacy of regulatory design
