

Summary: Amine Protecting Groups

Since amines are so nucleophilic, it's often desirable to mask their reactivity using a removable protecting group.

The most common situation is in **peptide synthesis**, where two amino acids are joined together. If the nitrogens of both amino acids are unprotected, then we can get undesired mixtures of products!

Carbamates are practical protecting groups for amines. They can be installed and removed under relatively mild conditions.

Two of the most common carbamate protecting groups are *t*-butyloxycarbonyl (Boc) and carboxybenzyl (Cbz).

Regulatory Peptides and Amines During Ontogeny and in Non-endocrine Cancers Lars-Inge Larsson, 1988 *The Role of Peptide Hormones in Insect Physiology, Biochemistry, and Molecular Biology Processes* Dov Borovsky, Yonggyun Kim, Klaus H. Hoffmann, 2021-03-22 *Hypothalamic Peptide Hormones and Pituitary Regulation* John Porter, 2012-12-06

The proceedings of a workshop conference are presented in this volume entitled *Hypothalamic Peptide Hormones and Pituitary Regulation*. The workshop was held in Wilson Hall on the campus of the National Institutes of Health Bethesda Maryland during the days of November 1-2, 1976 and is the most recent of three symposia on neuroendocrinology that have been sponsored by the National Institutes of Health. The first one was held on December 6-8, 1961 in the New Everglades Hotel at Miami Florida. During the first meeting much emphasis was given to the anatomical and physiological basis for the fledgling science of neuroendocrinology. The proceedings of that symposium were published under the title of *Advances in Neuroendocrinology* A. V. Nalbandov ed. University of Illinois Press Urbana Illinois 1963. The second workshop was held on January 8-11, 1969 in the Arizona Inn at Tucson Arizona and was unique in several respects. It was evident to the participants that definitive identification and the determination of the chemical structure of at least one hypothalamic releasing factor was at hand. See Workshop Conference on Bioassay and Chemistry of the Hypophyseotropic Hormones of the Hypothalamus. Critical Evaluation by J. Meites ed. The Williams and Wilkins Co. Baltimore Maryland 1970. Much of what was presented at the second workshop was dedicated to methods of bioassay of the various releasing factors.

Neuroendocrine Regulation and Altered Behaviour Pavel D. Hrdina, Radhey L. Singhal, 2012-12-06

In recent years it has become clearly recognized that many behavioural disturbances and psychiatric illnesses are intimately associated with alterations in neuroendocrine function. This volume is designed to provide a thorough up to date review of our current knowledge of the neuroendocrine correlates of altered behaviour in man and experimental animals. Particular emphasis has been focused on the mechanisms which may underlie the coupling of mental functions with endocrine changes and the possible common links in the central regulation of both endocrine and psychic activities. One of the main objectives of this book is to consider both the experimental and clinical approaches in studying the interrelationship between neuroendocrine regulation and altered behaviour and to assess its importance in the pathogenesis, diagnosis and treatment of mental disorders. The book has been organized into four major sections which focus on: i) the role of pituitary hormones in the regulation of CNS function; ii) the relationship between brain endorphin systems, psychotropic drugs and neuroendocrine regulation; iii) the importance of neuroendocrine regulation in the pathogenesis of mental disorders; and iv) biological markers of altered mental function. Each chapter is organized for ease of comprehension as well as for rapid retrieval of progress and essential information concerning the neuroendocrine basis of altered behaviour and psychiatric illnesses. The contributing authors were selected because of their widely recognized expertise in the field.

Neuroendocrine Regulation of Animal Vocalization Cheryl

S. Rosenfeld, Frauke Hoffmann, 2020-12-04 **Neuroendocrine Regulation of Animal Vocalization Mechanisms and Anthropogenic Factors in Animal Communication** examines the underpinning neuroendocrine NE mechanisms that drive animal communication across taxa. Written by international subject experts, the book focuses on the importance of animal communication in survival and reproduction at an individual and species level and the impact that increased production and accumulation of endocrine disrupting chemicals (EDCs) can have on these regulatory processes. This book discusses sound production, perception, processing, and response across a range of animals. This includes insects, fish, bats, birds, nonhuman primates, infant humans, and many others. Some chapters analyze how neuroactive substances, endocrine control, and chemical pollution affect the physiology of the animal's perceptive and sound-producing organs, as well as their auditory and vocal receptors and pathways. Other chapters address the recent approaches governments have taken to protect against the endocrine disruption of animal vocal behaviors. The book is a valuable resource for researchers and advanced students seeking first-rate material on neuroendocrinological effects on animal behavior and communication. Serves as the most comprehensive cross-taxa study of its kind, revolutionary in its focus on the impacts of EDCs on the processes guiding animal communication. Emphasizes the importance of production, perception, and processing of acoustic vocalization for survival. Analyzes recent governmental policies and protections against the effects of EDCs on humans and wildlife. **Cumulated Index Medicus**, 1990
